D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

5

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

2

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|---|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 0 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 3 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **5****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☐ 6 - 11 = M ☒ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **1****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **1****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **2****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

All three diagrams
in this row are
HIGH = 3 points

1

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		3
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
8		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L <i>Record the rating on the first page</i>		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 0 % undisturbed habitat + (<u>3</u> % moderate & low intensity land uses / 2) = 1.5%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	0	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 36 % undisturbed habitat + (<u>34</u> % moderate & low intensity land uses / 2) = 53%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		3
Rating of Landscape Potential If Score is: <input type="checkbox"/> 4 - 6 = H <input checked="" type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L <i>Record the rating on the first page</i>		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2		
<input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan	2	
Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L		<i>Record the rating on the first page</i>

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Maps and Figures required to answer questions correctly for Western Washington

Depressional Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	D 1.3, H 1.1, H 1.4	
Hydroperiods	D 1.4, H 1.2	
Location of outlet (<i>can be added to map of hydroperiods</i>)	D 1.1, D 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	D 2.2, D 5.2	
Map of the contributing basin	D 4.3, D 5.3	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	D 3.1, D 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	D 3.3	

Riverine Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Ponded depressions	R 1.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	R 2.4	
Plant cover of trees, shrubs, and herbaceous plants	R 1.2, R 4.2	
Width of unit vs. width of stream (<i>can be added to another figure</i>)	R 4.1	
Map of the contributing basin	R 2.2, R 2.3, R 5.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	R 3.1	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	R 3.2, R 3.3	

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants (<i>can be added to another figure</i>)	S 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.
If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding
from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

3

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

4

Total for D 1

Add the points in the boxes above

9

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

1

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

1

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?

Source

Yes = 1 No = 0

0

Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <p><input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)</p> <p><input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland</p> <p><input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)</p> <p><input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>)</p> <p><input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>)</p> <p><input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)</p>	3
<p>Total for H 1 Add the points in the boxes above</p>	9

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
<p>H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i></p> <p>0 % undisturbed habitat + (<u>3</u> % moderate & low intensity land uses / 2) = 1.5%</p> <p>If total accessible habitat is:</p> <p>> 1/3 (33.3%) of 1 km Polygon points = 3</p> <p>20 - 33% of 1 km Polygon points = 2</p> <p>10 - 19% of 1 km Polygon points = 1</p> <p>< 10 % of 1 km Polygon points = 0</p>	0
<p>H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i></p> <p>40 % undisturbed habitat + (<u>34</u> % moderate & low intensity land uses / 2) = 57%</p> <p>Undisturbed habitat > 50% of Polygon points = 3</p> <p>Undisturbed habitat 10 - 50% and in 1-3 patches points = 2</p> <p>Undisturbed habitat 10 - 50% and > 3 patches points = 1</p> <p>Undisturbed habitat < 10% of 1 km Polygon points = 0</p>	3
<p>H 2.3 Land use intensity in 1 km Polygon: If</p> <p>> 50% of 1 km Polygon is high intensity land use points = (-2)</p> <p>≤ 50% of 1km Polygon is high intensity points = 0</p>	0
<p>Total for H 2 Add the points in the boxes above</p>	3

Rating of Landscape Potential If Score is: ☐ 4 - 6 = H ☒ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
<p>H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.</p> <p>Site meets ANY of the following criteria: points = 2</p> <p><input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page)</p> <p><input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)</p> <p><input type="checkbox"/> It is mapped as a location for an individual WDFW priority species</p> <p><input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources</p> <p><input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan</p> <p>Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1</p> <p>Site does not meet any of the criteria above points = 0</p>	2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.
If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☐ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☐ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

SLOPE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

S 1.0. Does the site have the potential to improve water quality?

S 1.1. Characteristics of the average slope of the wetland: (*a 1% slope has a 1 ft vertical drop in elevation for every 100 ft of horizontal distance*)

Slope is 1% or less	points = 3	2
Slope is > 1% - 2%	points = 2	
Slope is > 2% - 5%	points = 1	
Slope is greater than 5%	points = 0	

S 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic
(*use NRCS definitions*):

Yes = 3 No = 0

0

S 1.3. Characteristics of the plants in the wetland that trap sediments and pollutants:

Choose the points appropriate for the description that best fits the plants in the wetland. *Dense means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 in.*

Dense, uncut, herbaceous plants > 90% of the wetland area	points = 6	6
Dense, uncut, herbaceous plants > ½ of area	points = 3	
Dense, woody, plants > ½ of area	points = 2	
Dense, uncut, herbaceous plants > ¼ of area	points = 1	
Does not meet any of the criteria above for plants	points = 0	

Total for S 1

Add the points in the boxes above

8

Rating of Site Potential If score is: ☐ 12 = H ☒ 6 - 11 = M ☐ 0 - 5 = L *Record the rating on the first page*

S 2.0. Does the landscape have the potential to support the water quality function of the site?

S 2.1. Is > 10% of the area within 150 ft on the uphill side of the wetland in
land uses that generate pollutants?

Yes = 1 No = 0

1

S 2.2. Are there other sources of pollutants coming into the wetland that are
not listed in question S 2.1?Other Sources Particulates in vehicle exhaust and stormwater Yes = 1 No = 0

1

Total for S 2

Add the points in the boxes above

2

Rating of Landscape Potential If score is: ☒ 1 - 2 = M ☐ 0 = L *Record the rating on the first page*

S 3.0. Is the water quality improvement provided by the site valuable to society?

S 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river,
lake, or marine water that is on the 303(d) list?

Yes = 1 No = 0

0

S 3.2. Is the wetland in a basin or sub-basin where water quality is an issue?
At least one aquatic resource in the basin is on the 303(d) list.

Yes = 1 No = 0

1

S 3.3. Has the site been identified in a watershed or local plan as important for
maintaining water quality? *Answer YES if there is a TMDL for the basin in
which the unit is found?*

Yes = 2 No = 0

2

Total for S 3

Add the points in the boxes above

3

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L *Record the rating on the first page*

SLOPE WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream erosion

S 4.0. Does the site have the potential to reduce flooding and stream erosion?

S 4.1. Characteristics of plants that reduce the velocity of surface flows during storms: Choose the points appropriate for the description that best fits conditions in the wetland. <i>Stems of plants should be thick enough (usually > 1/8 in), or dense enough, to remain erect during surface flows.</i>	0
Dense, uncut, rigid plants cover > 90% of the area of the wetland	points = 1
All other conditions	points = 0

Rating of Site Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 5.0. Does the landscape have the potential to support hydrologic functions of the site?

S 5.1. Is more than 25% of the area within 150 ft upslope of wetland in land uses or cover that generate excess surface runoff?	Yes = 1 No = 0	1
---	----------------	---

Rating of Landscape Potential If score is: ☒ 1 = M ☐ 0 = L

Record the rating on the first page

S 6.0. Are the hydrologic functions provided by the site valuable to society?

S 6.1. Distance to the nearest areas downstream that have flooding problems:		
The sub-basin immediately down-gradient of site has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	0
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

S 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?	Yes = 2 No = 0	0
--	----------------	---

Total for S 6	Add the points in the boxes above	0
---------------	-----------------------------------	---

Rating of Value If score is: ☐ 2 - 4 = H ☐ 1 = M ☒ 0 = L

Record the rating on the first page

NOTES and FIELD OBSERVATIONS:

Wetland is located in a median between SR 18 and the I-90 onramp on a <1-2% slope that flows to an unvegetated ditch. Water flows south through the ditch and exits through a culvert under the I-90 ramp to the east. Sources of hydrology are likely stormwater sheet flow, precipitation, and overflow from the ditch. A restrictive soil layer of compact roadfill is present within 12in of the soil surface.

These questions apply to wetlands of all HGM classes.**HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods).

- | | | |
|--|-------------------------------------|---|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input checked="" type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | 2 points | |
| <input type="checkbox"/> Freshwater tidal wetland | 2 points | |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 0 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

**None** = 0 points**Low** = 1 point**Moderate** = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features:

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ☐ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)
- ☐ Standing snags (dbh > 4 in) within the wetland
- ☐ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ☐ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (*cut shrubs or trees that have not yet weathered where wood is exposed*)
- ☐ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (*structures for egg-laying by amphibians*)
- ☒ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☐ 7 - 14 = M ☒ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?

H 2.1 Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate:

0 % undisturbed habitat + (0 % moderate & low intensity land uses / 2) = 0%

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon

points = 3

20 - 33% of 1 km Polygon

points = 2

10 - 19% of 1 km Polygon

points = 1

< 10 % of 1 km Polygon

points = 0

0

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate:

43 % undisturbed habitat + (30 % moderate & low intensity land uses / 2) = 58%

Undisturbed habitat > 50% of Polygon

points = 3

Undisturbed habitat 10 - 50% and in 1-3 patches

points = 2

Undisturbed habitat 10 - 50% and > 3 patches

points = 1

Undisturbed habitat < 10% of 1 km Polygon

points = 0

3

H 2.3 Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use

points = (-2)

≤ 50% of 1km Polygon is high intensity

points = 0

0

3

Rating of Landscape Potential If Score is: ☐ 4 - 6 = H ☒ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? *Choose only the highest score that applies to the wetland being rated.*

Site meets ANY of the following criteria:

points = 2

☐ It has 3 or more priority habitats within 100 m (see next page)

☐ It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)

☐ It is mapped as a location for an individual WDFW priority species

☐ It is a Wetland of High Conservation Value as determined by the Department of Natural Resources

☐ It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100m

points = 1

Site does not meet any of the criteria above

points = 0

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☐ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input checked="" type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland.
- ☐ The wetland is larger than 1/10 ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.
If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
- ☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
- ☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
- ☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
- ☒ The overbank flooding occurs at least once every 2 years.

☐ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS		
Water Quality Functions - Indicators that the site functions to improve water quality		
R 1.0. Does the site have the potential to improve water quality?		
R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a flooding event:		
Depressions cover $> \frac{3}{4}$ area of wetland	points = 8	2
Depressions cover $> \frac{1}{2}$ area of wetland	points = 4	
Depressions present but cover $< \frac{1}{2}$ area of wetland	points = 2	
No depressions present	points = 0	
R 1.2. Structure of plants in the wetland (areas with $>90\%$ cover at person height, not Cowardin classes)		
Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	8
<input type="checkbox"/> Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
<input type="checkbox"/> Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0	
Total for R 1	Add the points in the boxes above	10

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 2.0. Does the landscape have the potential to support the water quality function of the site?		
R 2.1. Is the wetland within an incorporated city or within its UGA?	Yes = 2 No = 0	2
R 2.2. Does the contributing basin to the wetland include a UGA or incorporated area?	Yes = 1 No = 0	1
R 2.3. Does at least 10% of the contributing basin contain tilled fields, pastures, or forests that have been clearcut within the last 5 years?	Yes = 1 No = 0	0
R 2.4. Is $> 10\%$ of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	0
R 2.5. Are there other sources of pollutants coming into the wetland that are not listed in questions R 2.1 - R 2.4?		1
Other Sources <u>Elk</u>	Yes = 1 No = 0	
Total for R 2	Add the points in the boxes above	4

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS

Hydrologic Functions - Indicators that site functions to reduce flooding and stream erosion

R 4.0. Does the site have the potential to reduce flooding and erosion?

R 4.1. Characteristics of the overbank storage the wetland provides:

Estimate the average width of the wetland perpendicular to the direction of the flow and the width of the stream or river channel (distance between banks). Calculate the ratio: (average width of wetland)/(average width of stream between banks).

If the ratio is more than 20	points = 9	9
If the ratio is 10 - 20	points = 6	
If the ratio is 5 - < 10	points = 4	
If the ratio is 1 - < 5	points = 2	
If the ratio is < 1	points = 1	

R 4.2. Characteristics of plants that slow down water velocities during floods: *Treat large woody debris as forest or shrub. Choose the points appropriate for the best description (polygons need to have >90% cover at person height. These are NOT Cowardin classes).*

Forest or shrub for > $\frac{1}{3}$ area OR emergent plants > $\frac{2}{3}$ area	points = 7	7
Forest or shrub for > $\frac{1}{10}$ area OR emergent plants > $\frac{1}{3}$ area	points = 4	
Plants do not meet above criteria	points = 0	

Total for R 4 Add the points in the boxes above **16**

Rating of Site Potential If score is: ☒ 12 - 16 = H ☐ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 5.0. Does the landscape have the potential to support the hydrologic functions of the site?

R 5.1. Is the stream or river adjacent to the wetland downcut? Yes = 0 No = 1 **1**

R 5.2. Does the up-gradient watershed include a UGA or incorporated area? Yes = 1 No = 0 **1**

R 5.3 Is the up-gradient stream or river controlled by dams? Yes = 0 No = 1 **1**

Total for R 5 Add the points in the boxes above **3**

Rating of Landscape Potential If score is: ☒ 3 = H ☐ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 6.0. Are the hydrologic functions provided by the site valuable to society?

R 6.1. Distance to the nearest areas downstream that have flooding problems?

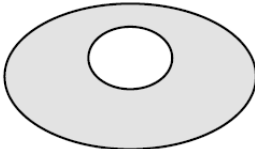

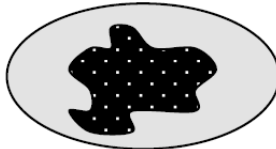

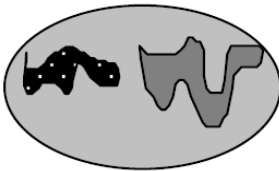

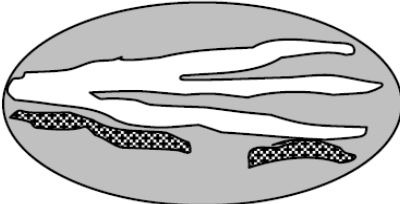

Choose the description that best fits the site.

The sub-basin immediately down-gradient of the wetland has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	1
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

R 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0**

Total for R 6 Add the points in the boxes above **1**

Rating of Value If score is: ☐ 2 - 4 = H ☒ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
<p>H 1.1. Structure of plant community: <i>Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.</i></p> <div style="display: flex; justify-content: space-between;"> <div> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) <i>If the unit has a Forested class, check if:</i> <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon </div> <div> 4 structures or more: points = 4 3 structures: points = 2 2 structures: points = 1 1 structure: points = 0 </div> </div>	2
<p>H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods).</p> <div style="display: flex; justify-content: space-between;"> <div> <input checked="" type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake Fringe wetland <input type="checkbox"/> Freshwater tidal wetland </div> <div> 4 or more types present: points = 3 3 types present: points = 2 2 types present: points = 1 1 types present: points = 0 </div> </div> <div style="text-align: right;"> 2 points 2 points </div>	3
<p>H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft². <i>Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle</i></p> <div style="display: flex; justify-content: space-between;"> <div> <p>If you counted:</p> <div style="display: flex; align-items: center;"> <div style="width: 100px;"></div> <div> > 19 species 5 - 19 species < 5 species </div> </div> </div> <div> points = 2 points = 1 points = 0 </div> </div>	1
<p>H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. <i>If you have four or more plant classes or three classes and open water, the rating is always high.</i></p> <div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p>None = 0 points</p> </div> <div style="text-align: center;">  <p>Low = 1 point</p> </div> <div style="text-align: center;">  <p>Moderate = 2 points</p> </div> </div> <div style="display: flex; justify-content: space-between; margin-top: 20px;"> <div> <p>All three diagrams in this row are HIGH = 3 points</p> </div> <div style="display: flex; justify-content: space-around;">    </div> </div>	3

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata) 	4
Total for H 1	13

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 20.9 % undisturbed habitat + (1.11 % moderate & low intensity land uses / 2) = 21.455% If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	2
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 42.05 % undisturbed habitat + (28.17 % moderate & low intensity land uses / 2) = 56.135% Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0	0
Total for H 2	5

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2 <ul style="list-style-type: none"> <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input checked="" type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland </div>	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2 </div>	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II </div>	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 2.2 <input checked="" type="checkbox"/> No - Go to SC 2.3 </div>	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <div style="text-align: right;"> <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input checked="" type="checkbox"/> No = Not WHCV </div>	
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i>	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 </div>	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog </div>	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 </div> <p>NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog.</p>	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog </div>	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland.
- ☐ The wetland is larger than 1/10 ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants (<i>can be added to another figure</i>)	S 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

- Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet). points = 3
- Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet. points = 2
- ☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing. points = 1
- ☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions). Yes = 4 No = 0 **0****D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):**

- Wetland has persistent, ungrazed, plants > 95% of area points = 5
- Wetland has persistent, ungrazed, plants > 1/2 of area points = 3
- Wetland has persistent, ungrazed plants > 1/10 of area points = 1
- Wetland has persistent, ungrazed plants < 1/10 of area points = 0

D 1.4. Characteristics of seasonal ponding or inundation:

- This is the area that is ponded for at least 2 months. See description in manual.*
- Area seasonally ponded is > 1/2 total area of wetland points = 4
- Area seasonally ponded is > 1/4 total area of wetland points = 2
- Area seasonally ponded is < 1/4 total area of wetland points = 0

Total for D 1 Add the points in the boxes above **7****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **0****D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?** Yes = 1 No = 0 **1****D 2.3. Are there septic systems within 250 ft of the wetland?** Yes = 1 No = 0 **0****D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?** Yes = 1 No = 0 **0****Total for D 2** Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 or 4 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 3.0. Is the water quality improvement provided by the site valuable to society?****D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?** Yes = 1 No = 0 **0****D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?** Yes = 1 No = 0 **0****D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?** Yes = 2 No = 0 **2****Total for D 3** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|---|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 0 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 3 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **5****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☐ 6 - 11 = M ☒ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **0****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **1****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		1
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input type="checkbox"/> 7 - 14 = M <input checked="" type="checkbox"/> 0 - 6 = L Record the rating on the first page		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input type="checkbox"/> 7 - 14 = M <input checked="" type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 3 % undisturbed habitat + (_____ 0 % moderate & low intensity land uses / 2) = 3%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	0	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 50 % undisturbed habitat + (_____ 31 % moderate & low intensity land uses / 2) = 65.5%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		3
Rating of Landscape Potential If Score is: <input type="checkbox"/> 4 - 6 = H <input checked="" type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	2	
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L		2
Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☐ The overbank flooding occurs at least once every 2 years.

- ☒ **NO** - go to 6 ☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

3

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

2

Total for D 1

Add the points in the boxes above

7

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

0

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

1

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?

Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **1****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		2
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input type="checkbox"/> 7 - 14 = M <input checked="" type="checkbox"/> 0 - 6 = L Record the rating on the first page		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input type="checkbox"/> 7 - 14 = M <input checked="" type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 0 % undisturbed habitat + (<u>3</u> % moderate & low intensity land uses / 2) = 1.5%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0		0
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 50 % undisturbed habitat + (<u>28</u> % moderate & low intensity land uses / 2) = 64%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0		3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		3
Rating of Landscape Potential If Score is: <input type="checkbox"/> 4 - 6 = H <input checked="" type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan		2
Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1		
Site does not meet any of the criteria above points = 0		
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland </div>	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2 </div>	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II </div>	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 </div>	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV </div>	
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <div style="text-align: right;"> <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV </div>	
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 3.0. Bogs	
Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i>	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 </div>	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog </div>	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 </div>	
NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog.	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog </div>	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☒ The overbank flooding occurs at least once every 2 years.

- ☐ **NO** - go to 6 ☒ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

5

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

2

Total for D 1

Add the points in the boxes above

9

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

0

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|---|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 5 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 3 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **10****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **0****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **0****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **0****Rating of Landscape Potential** If score is: ☐ 3 = H ☐ 1 or 2 = M ☒ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 4 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|----------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 3 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input checked="" type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 2 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

3

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input checked="" type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata) 	5
<p>Total for H 1 Add the points in the boxes above</p>	17

Rating of Site Potential If Score is: ☒ **15 - 18 = H** ☐ **7 - 14 = M** ☐ **0 - 6 = L** *Record the rating on the first page*

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
<p>H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 30 % undisturbed habitat + (<u>15</u> % moderate & low intensity land uses / 2) = 37.5%</p> <p>If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0</p>	3
<p>H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 53 % undisturbed habitat + (<u>33</u> % moderate & low intensity land uses / 2) = 69.5%</p> <p>Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0</p>	3
<p>H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0</p>	0
<p>Total for H 2 Add the points in the boxes above</p>	6

Rating of Landscape Potential If Score is: ☒ **4 - 6 = H** ☐ **1 - 3 = M** ☐ **< 1 = L** *Record the rating on the first page*

H 3.0. Is the habitat provided by the site valuable to society?	
<p>H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan <p>Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0</p>	2

Rating of Value If Score is: ☒ **2 = H** ☐ **1 = M** ☐ **0 = L** *Record the rating on the first page*

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>	

Portions of the wetland boundary, that extend beyond the project, were estimated to complete the wetland rating. Refer to the JARPA figures for the surveyed wetland boundary.

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

5

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

2

Total for D 1

Add the points in the boxes above

9

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

1

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?Source Roadside debris and garbage

Yes = 1 No = 0

Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | |
|---|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. points = 2 <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.**HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat**H 1.0.** Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class.* Check the Cowardin plant classes in the wetland. *Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 4 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|----------|
| <input checked="" type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 3 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 2 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

**None** = 0 points**Low** = 1 point**Moderate** = 2 points

3

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features:</p> <p>Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input checked="" type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata) 	5
<p>Total for H 1</p>	17

Rating of Site Potential If Score is: ☒ 15 - 18 = H ☐ 7 - 14 = M ☐ 0 - 6 = L *Record the rating on the first page*

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). Calculate: 43 % undisturbed habitat + (11 % moderate & low intensity land uses / 2) = 48.5%		3
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0		
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. Calculate: 65 % undisturbed habitat + (28 % moderate & low intensity land uses / 2) = 79%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0		
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2		6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L *Record the rating on the first page*

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? <i>Choose only the highest score that applies to the wetland being rated.</i>		
Site meets ANY of the following criteria: <ul style="list-style-type: none"> <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan 		points = 2
Site has 1 or 2 priority habitats (listed on next page) with in 100m		points = 1
Site does not meet any of the criteria above		points = 0

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L *Record the rating on the first page*

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland </div>	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2 </div>	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II </div>	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 </div> SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV </div> SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <div style="text-align: right;"> <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV </div> SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 </div> SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog </div> SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 </div> <p>NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog.</p> SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog </div>	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants (<i>can be added to another figure</i>)	S 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.
If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
- ☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
- ☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
- ☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
- ☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

D 1.0. Does the site have the potential to improve water quality?		
D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	3
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).		
Yes = 4 No = 0		0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	3
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:		
<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		
Area seasonally ponded is > 1/2 total area of wetland	points = 4	2
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0	
Total for D 1		8

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

D 2.0. Does the landscape have the potential to support the water quality function of the site?		
D 2.1. Does the wetland unit receive stormwater discharges?	Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	0
D 2.3. Are there septic systems within 250 ft of the wetland?	Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?		0
Source	Yes = 1 No = 0	
Total for D 2		1

Rating of Landscape Potential If score is: ☐ 3 or 4 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

D 3.0. Is the water quality improvement provided by the site valuable to society?		
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?	Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?	Yes = 1 No = 0	1
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?	Yes = 2 No = 0	2
Total for D 3		3

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation

D 4.0. Does the site have the potential to reduce flooding and erosion?

D 4.1. Characteristics of surface water outflows from the wetland:

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 4 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|---|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 3 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 5 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **12****Rating of Site Potential** If score is: ☒ 12 - 16 = H ☐ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

D 5.0. Does the landscape have the potential to support hydrologic function of the site?

D 5.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0 1

D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff? Yes = 1 No = 0 0

D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)? Yes = 1 No = 0 0

Total for D 5 Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

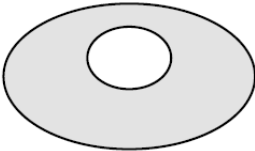

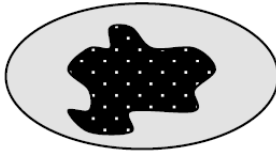

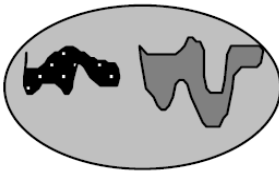

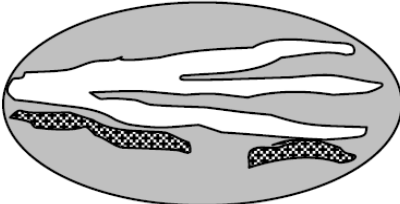

D 6.0. Are the hydrologic functions provided by the site valuable to society?

D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 0

Total for D 6 Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
<p>H 1.1. Structure of plant community: <i>Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.</i></p> <div style="display: flex; justify-content: space-between;"> <div> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) <input type="checkbox"/> Forested (areas where trees have > 30% cover) <i>If the unit has a Forested class, check if:</i> <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon </div> <div> 4 structures or more: points = 4 3 structures: points = 2 2 structures: points = 1 1 structure: points = 0 </div> </div>	1
<p>H 1.2. Hydroperiods Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (see text for descriptions of hydroperiods).</p> <div style="display: flex; justify-content: space-between;"> <div> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake Fringe wetland <input type="checkbox"/> Freshwater tidal wetland </div> <div> 4 or more types present: points = 3 3 types present: points = 2 2 types present: points = 1 1 types present: points = 0 </div> </div> <div style="text-align: right;"> 2 points 2 points </div>	1
<p>H 1.3. Richness of plant species Count the number of plant species in the wetland that cover at least 10 ft². <i>Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle</i></p> <div style="display: flex; justify-content: space-between;"> <div> <p>If you counted:</p> <div style="display: flex; justify-content: space-between;"> <div> > 19 species 5 - 19 species < 5 species </div> <div> points = 2 points = 1 points = 0 </div> </div> </div> </div>	1
<p>H 1.4. Interspersion of habitats Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. <i>If you have four or more plant classes or three classes and open water, the rating is always high.</i></p> <div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p>None = 0 points</p> </div> <div style="text-align: center;">  <p>Low = 1 point</p> </div> <div style="text-align: center;">  <p>Moderate = 2 points</p> </div> </div> <div style="display: flex; justify-content: space-between; margin-top: 20px;"> <div> <p>All three diagrams in this row are HIGH = 3 points</p> </div> <div style="display: flex; justify-content: space-around;">    </div> </div>	1

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata) 	4
Total for H 1	8

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 24.4 % undisturbed habitat + (_____ 0 % moderate & low intensity land uses / 2) = 24.4% If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	2
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 60.44 % undisturbed habitat + (_____ 4.3 % moderate & low intensity land uses / 2) = 62.59% Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0	0
Total for H 2	5

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2 <ul style="list-style-type: none"> <input type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	1

Rating of Value If Score is: ☐ 2 = H ☒ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☐ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☐ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland </div>	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2 </div>	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II </div>	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 2.2 <input checked="" type="checkbox"/> No - Go to SC 2.3 </div>	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <div style="text-align: right;"> <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input checked="" type="checkbox"/> No = Not WHCV </div>	
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV </div>	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i>	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 </div>	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog </div>	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 </div> <p>NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog.</p>	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog </div>	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or ungrazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☐ The overbank flooding occurs at least once every 2 years.

- ☒ **NO** - go to 6 ☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as **Depressional** for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

D 1.0. Does the site have the potential to improve water quality?		
D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	3
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).		
	Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	5
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:		
<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		4
Area seasonally ponded is > 1/2 total area of wetland	points = 4	
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0	
Total for D 1		12

Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		3
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
9		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L <i>Record the rating on the first page</i>		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 72 % undisturbed habitat + (21 % moderate & low intensity land uses / 2) = 82.5%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	3	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 72 % undisturbed habitat + (21 % moderate & low intensity land uses / 2) = 82.5%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L <i>Record the rating on the first page</i>		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2		
<input type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan	2	
Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L		<i>Record the rating on the first page</i>

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☐ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☐ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than 1/10 ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

3

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

3

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

4

Total for D 1

Add the points in the boxes above

10**Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

0

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?

Source

Yes = 1 No = 0

0

| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		3
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 71 % undisturbed habitat + (22 % moderate & low intensity land uses / 2) = 82%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	3	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 71 % undisturbed habitat + (22 % moderate & low intensity land uses / 2) = 82%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	2	
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L		Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☐ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☐ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>

Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants (<i>can be added to another figure</i>)	S 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☒ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☒ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

3 HGM CLASSES PRESENT: a portion of the wetland is slope, a portion is riverine, and a portion is depressional.

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

5

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

0

Total for D 1

Add the points in the boxes above

7

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?****D 2.1. Does the wetland unit receive stormwater discharges?**

Yes = 1 No = 0

0

D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

D 2.3. Are there septic systems within 250 ft of the wetland?

Yes = 1 No = 0

0

D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?

Source

Yes = 1 No = 0

Add the points in the boxes above

0

Rating of Landscape Potential If score is: ☐ 3 or 4 = H ☐ 1 or 2 = M ☒ 0 = L Record the rating on the first page**D 3.0. Is the water quality improvement provided by the site valuable to society?****D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?**

Yes = 1 No = 0

0

D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?

Yes = 1 No = 0

0

D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?

Yes = 2 No = 0

2

Total for D 3

Add the points in the boxes above

2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|---|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 0 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 3 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **5****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☐ 6 - 11 = M ☒ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **0****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **0****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **0****Rating of Landscape Potential** If score is: ☐ 3 = H ☐ 1 or 2 = M ☒ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		3
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 69 % undisturbed habitat + (24 % moderate & low intensity land uses / 2) = 81%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	3	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 69 % undisturbed habitat + (24 % moderate & low intensity land uses / 2) = 81%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	2	
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L		2
Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☒ NO - go to 5

☐ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding
from that stream or river,

☒ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☒ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

R 1.0. Does the site have the potential to improve water quality?

R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a flooding event:

Depressions cover $> \frac{3}{4}$ area of wetland	points = 8	2
Depressions cover $> \frac{1}{2}$ area of wetland	points = 4	
Depressions present but cover $< \frac{1}{2}$ area of wetland	points = 2	
No depressions present	points = 0	

R 1.2. Structure of plants in the wetland (areas with $> 90\%$ cover at person height, **not** Cowardin classes)

Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	6
<input checked="" type="checkbox"/> Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
<input type="checkbox"/> Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0	

Total for R 1 Add the points in the boxes above **8****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 2.0. Does the landscape have the potential to support the water quality function of the site?

R 2.1. Is the wetland within an incorporated city or within its UGA? Yes = 2 No = 0 0

R 2.2. Does the contributing basin to the wetland include a UGA or incorporated area? Yes = 1 No = 0 0

R 2.3. Does at least 10% of the contributing basin contain tilled fields, pastures, or forests that have been clearcut within the last 5 years? Yes = 1 No = 0 0

R 2.4. Is $> 10\%$ of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0 0R 2.5. Are there other sources of pollutants coming into the wetland that are not listed in questions R 2.1 - R 2.4?
Other Sources Dredging Yes = 1 No = 0 1Total for R 2 Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 - 6 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 3.0. Is the water quality improvement provided by the site valuable to society?

R 3.1. Is the wetland along a stream or river that is on the 303(d) list or on a tributary that drains to one within 1 mi? Yes = 1 No = 0 0

R 3.2. Is the wetland along a stream or river that has TMDL limits for nutrients, toxics, or pathogens? Yes = 1 No = 0 0

R 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? (answer YES if there is a TMDL for the drainage in which the unit is found) Yes = 2 No = 0 2

Total for R 3 Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Hydrologic Functions** - Indicators that site functions to reduce flooding and stream erosion

R 4.0. Does the site have the potential to reduce flooding and erosion?

R 4.1. Characteristics of the overbank storage the wetland provides:

Estimate the average width of the wetland perpendicular to the direction of the flow and the width of the stream or river channel (distance between banks). Calculate the ratio: (average width of wetland)/(average width of stream between banks).

If the ratio is more than 20	points = 9	1
If the ratio is 10 - 20	points = 6	
If the ratio is 5 - < 10	points = 4	
If the ratio is 1 - < 5	points = 2	
If the ratio is < 1	points = 1	

R 4.2. Characteristics of plants that slow down water velocities during floods: *Treat large woody debris as forest or shrub. Choose the points appropriate for the best description (polygons need to have >90% cover at person height. These are NOT Cowardin classes).*

Forest or shrub for > $\frac{1}{3}$ area OR emergent plants > $\frac{2}{3}$ area	points = 7	7
Forest or shrub for > $\frac{1}{10}$ area OR emergent plants > $\frac{1}{3}$ area	points = 4	
Plants do not meet above criteria	points = 0	

Total for R 4 Add the points in the boxes above **8**

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 5.0. Does the landscape have the potential to support the hydrologic functions of the site?

R 5.1. Is the stream or river adjacent to the wetland downcut? Yes = 0 No = 1 1

R 5.2. Does the up-gradient watershed include a UGA or incorporated area? Yes = 1 No = 0 0

R 5.3 Is the up-gradient stream or river controlled by dams? Yes = 0 No = 1 1

Total for R 5 Add the points in the boxes above **2**

Rating of Landscape Potential If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 6.0. Are the hydrologic functions provided by the site valuable to society?

R 6.1. Distance to the nearest areas downstream that have flooding problems?

Choose the description that best fits the site.

The sub-basin immediately down-gradient of the wetland has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	2
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

R 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 0

Total for R 6 Add the points in the boxes above **2**

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.**HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat**H 1.0. Does the site have the potential to provide habitat?**

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 0 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input checked="" type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input checked="" type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

**None = 0 points****Low = 1 point****Moderate = 2 points**

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		3
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 70 % undisturbed habitat + (<u>24</u> % moderate & low intensity land uses / 2) = 82%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0		3
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 70 % undisturbed habitat + (<u>24</u> % moderate & low intensity land uses / 2) = 82%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0		3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		0
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		2
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Category of wetland based on Special Characteristics

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☒ The overbank flooding occurs at least once every 2 years.

- ☐ **NO** - go to 6 ☒ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).

points = 3

Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.

points = 2

☐ Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing

points = 1

☐ Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.

points = 1

2

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area

points = 5

Wetland has persistent, ungrazed, plants > 1/2 of area

points = 3

Wetland has persistent, ungrazed plants > 1/10 of area

points = 1

Wetland has persistent, ungrazed plants < 1/10 of area

points = 0

5

D 1.4. Characteristics of seasonal ponding or inundation:*This is the area that is ponded for at least 2 months. See description in manual.*

Area seasonally ponded is > 1/2 total area of wetland

points = 4

Area seasonally ponded is > 1/4 total area of wetland

points = 2

Area seasonally ponded is < 1/4 total area of wetland

points = 0

4

Total for D 1

Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **0****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **1****Total for D 5** Add the points in the boxes above **2****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <p><input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)</p> <p><input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland</p> <p><input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)</p> <p><input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>)</p> <p><input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>)</p> <p><input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)</p>	3
<p>Total for H 1 Add the points in the boxes above</p>	10

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
<p>H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 70 % undisturbed habitat + (<u>23</u> % moderate & low intensity land uses / 2) = 81.5%</p> <p>If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0</p>	3
<p>H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 70 % undisturbed habitat + (<u>23</u> % moderate & low intensity land uses / 2) = 81.5%</p> <p>Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0</p>	3
<p>H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0</p>	0
<p>Total for H 2 Add the points in the boxes above</p>	6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
<p>H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.</p> <p>Site meets ANY of the following criteria: points = 2</p> <p><input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page)</p> <p><input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)</p> <p><input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species</p> <p><input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources</p> <p><input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan</p> <p>Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1</p> <p>Site does not meet any of the criteria above points = 0</p>	2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☒ The overbank flooding occurs at least once every 2 years.

- ☐ **NO** - go to 6 ☒ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	2
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area	points = 5	5
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	

D 1.4. Characteristics of seasonal ponding or inundation:

<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		2
Area seasonally ponded is > 1/2 total area of wetland	points = 4	
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0	

Total for D 1

Add the points in the boxes above

9

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 2.0. Does the landscape have the potential to support the water quality function of the site?**

D 2.1. Does the wetland unit receive stormwater discharges?	Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland?	Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?		1
Source	Yes = 1 No = 0	

Total for D 2

Add the points in the boxes above

3

Rating of Landscape Potential If score is: ☒ 3 or 4 = H ☐ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 3.0. Is the water quality improvement provided by the site valuable to society?**

D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?	Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?	Yes = 1 No = 0	0
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?	Yes = 2 No = 0	2

Total for D 3

Add the points in the boxes above

2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|--|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 3 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input checked="" type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 3 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **8****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **1****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **1****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **2****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input checked="" type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <p><input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)</p> <p><input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland</p> <p><input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)</p> <p><input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>)</p> <p><input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>)</p> <p><input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)</p>	4
<p>Total for H 1 Add the points in the boxes above</p>	10

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
<p>H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 71 % undisturbed habitat + (23 % moderate & low intensity land uses / 2) = 82.5%</p> <p>If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0</p>	3
<p>H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 71 % undisturbed habitat + (23 % moderate & low intensity land uses / 2) = 82.5%</p> <p>Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0</p>	3
<p>H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0</p>	0
<p>Total for H 2 Add the points in the boxes above</p>	6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
<p>H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.</p> <p>Site meets ANY of the following criteria: points = 2</p> <p><input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page)</p> <p><input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)</p> <p><input checked="" type="checkbox"/> It is mapped as a location for an individual WDFW priority species</p> <p><input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources</p> <p><input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan</p> <p>Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1</p> <p>Site does not meet any of the criteria above points = 0</p>	2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ **NO** - go to 2

☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ **NO - Saltwater Tidal Fringe (Estuarine)**

☐ **YES - Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ **NO** - go to 3

☐ **YES** - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ **NO** - go to 4

☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ **NO** - go to 5

☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ **NO** - go to 6

☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☐ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality**D 1.0. Does the site have the potential to improve water quality?****D 1.1. Characteristics of surface water outflows from the wetland:**

Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	2
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	

D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).

Yes = 4 No = 0

0

D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):

Wetland has persistent, ungrazed, plants > 95% of area	points = 5	3
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	

D 1.4. Characteristics of seasonal ponding or inundation:

<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		0
Area seasonally ponded is > 1/2 total area of wetland	points = 4	
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0

Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **0****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **0****Rating of Landscape Potential** If score is: ☐ 3 = H ☐ 1 or 2 = M ☒ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 2 |
| • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input type="checkbox"/> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

<p>H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i></p> <p><input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)</p> <p><input type="checkbox"/> Standing snags (dbh > 4 in) within the wetland</p> <p><input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)</p> <p><input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>)</p> <p><input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>)</p> <p><input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)</p>	1
<p>Total for H 1 Add the points in the boxes above</p>	7

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?	
<p>H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 74 % undisturbed habitat + (23 % moderate & low intensity land uses / 2) = 85.5%</p> <p>If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0</p>	3
<p>H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 74 % undisturbed habitat + (23 % moderate & low intensity land uses / 2) = 85.5%</p> <p>Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0</p>	3
<p>H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0</p>	0
<p>Total for H 2 Add the points in the boxes above</p>	6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
<p>H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.</p> <p>Site meets ANY of the following criteria: points = 2</p> <p><input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page)</p> <p><input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)</p> <p><input type="checkbox"/> It is mapped as a location for an individual WDFW priority species</p> <p><input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources</p> <p><input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan</p> <p>Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1</p> <p>Site does not meet any of the criteria above points = 0</p>	2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

Category of wetland based on Special Characteristics

If you answered No for all types, enter "Not Applicable" on Summary Form

Portions of the wetland boundary, that extend beyond the project, were estimated to complete the wetland rating. Refer to the JARPA figures for the surveyed wetland boundary.

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding
from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ NO - go to 6

☐ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

SLOPE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

S 1.0. Does the site have the potential to improve water quality?

S 1.1. Characteristics of the average slope of the wetland: (*a 1% slope has a 1 ft vertical drop in elevation for every 100 ft of horizontal distance*)

Slope is 1% or less	points = 3	1
Slope is > 1% - 2%	points = 2	
Slope is > 2% - 5%	points = 1	
Slope is greater than 5%	points = 0	

S 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions):

Yes = 3 No = 0

0

S 1.3. Characteristics of the plants in the wetland that trap sediments and pollutants:

Choose the points appropriate for the description that best fits the plants in the wetland. *Dense means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 in.*

Dense, uncut, herbaceous plants > 90% of the wetland area	points = 6	2
Dense, uncut, herbaceous plants > 1/2 of area	points = 3	
Dense, woody, plants > 1/2 of area	points = 2	
Dense, uncut, herbaceous plants > 1/4 of area	points = 1	
Does not meet any of the criteria above for plants	points = 0	

Total for S 1

Add the points in the boxes above

3

Rating of Site Potential If score is: ☐ 12 = H ☐ 6 - 11 = M ☒ 0 - 5 = L

Record the rating on the first page

S 2.0. Does the landscape have the potential to support the water quality function of the site?

S 2.1. Is > 10% of the area within 150 ft on the uphill side of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

S 2.2. Are there other sources of pollutants coming into the wetland that are not listed in question S 2.1?

Other Sources Yes = 1 No = 0

0

Total for S 2

Add the points in the boxes above

0

Rating of Landscape Potential If score is: ☐ 1 - 2 = M ☒ 0 = L

Record the rating on the first page

S 3.0. Is the water quality improvement provided by the site valuable to society?

S 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?

Yes = 1 No = 0

0

S 3.2. Is the wetland in a basin or sub-basin where water quality is an issue? *At least one aquatic resource in the basin is on the 303(d) list.*

Yes = 1 No = 0

0

S 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? *Answer YES if there is a TMDL for the basin in which the unit is found?*

Yes = 2 No = 0

2

Total for S 3

Add the points in the boxes above

2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

SLOPE WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream erosion

S 4.0. Does the site have the potential to reduce flooding and stream erosion?

S 4.1. Characteristics of plants that reduce the velocity of surface flows during storms: Choose the points appropriate for the description that best fits conditions in the wetland. <i>Stems of plants should be thick enough (usually > 1/8 in), or dense enough, to remain erect during surface flows.</i>	1
Dense, uncut, rigid plants cover > 90% of the area of the wetland	points = 1
All other conditions	points = 0

Rating of Site Potential If score is: ☒ 1 = M ☐ 0 = L

Record the rating on the first page

S 5.0. Does the landscape have the potential to support hydrologic functions of the site?

S 5.1. Is more than 25% of the area within 150 ft upslope of wetland in land uses or cover that generate excess surface runoff?	Yes = 1 No = 0	0
---	----------------	---

Rating of Landscape Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 6.0. Are the hydrologic functions provided by the site valuable to society?

S 6.1. Distance to the nearest areas downstream that have flooding problems:		
The sub-basin immediately down-gradient of site has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	2
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

S 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?	Yes = 2 No = 0	0
--	----------------	---

Total for S 6	Add the points in the boxes above	2
---------------	-----------------------------------	---

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

NOTES and FIELD OBSERVATIONS:

These questions apply to wetlands of all HGM classes.**HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat**H 1.0.** Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class.* Check the Cowardin plant classes in the wetland. *Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

**None** = 0 points**Low** = 1 point**Moderate** = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features:

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ☒ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)
- ☒ Standing snags (dbh > 4 in) within the wetland
- ☒ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ☐ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (*cut shrubs or trees that have not yet weathered where wood is exposed*)
- ☐ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (*structures for egg-laying by amphibians*)
- ☒ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)

4

Total for H 1

Add the points in the boxes above

10

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?

H 2.1 Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate:

$$81 \% \text{ undisturbed habitat} + (\text{ } 18 \% \text{ moderate \& low intensity land uses} / 2) = 90\%$$

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon

points = 3

20 - 33% of 1 km Polygon

points = 2

10 - 19% of 1 km Polygon

points = 1

< 10 % of 1 km Polygon

points = 0

3

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate:

$$81 \% \text{ undisturbed habitat} + (\text{ } 18 \% \text{ moderate \& low intensity land uses} / 2) = 90\%$$

Undisturbed habitat > 50% of Polygon

points = 3

Undisturbed habitat 10 - 50% and in 1-3 patches

points = 2

Undisturbed habitat 10 - 50% and > 3 patches

points = 1

Undisturbed habitat < 10% of 1 km Polygon

points = 0

3

H 2.3 Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use

points = (-2)

≤ 50% of 1km Polygon is high intensity

points = 0

0

Total for H 2

Add the points in the boxes above

6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.

Site meets ANY of the following criteria:

points = 2

☒ It has 3 or more priority habitats within 100 m (see next page)

☐ It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)

☐ It is mapped as a location for an individual WDFW priority species

☐ It is a Wetland of High Conservation Value as determined by the Department of Natural Resources

☐ It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100m

points = 1

Site does not meet any of the criteria above

points = 0

2

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>	

Portions of the wetland boundary, that extend beyond the project, were estimated to complete the wetland rating. Refer to the JARPA figures for the surveyed wetland boundary.

Lake Fringe Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	L 1.1, L 4.1, H 1.1, H 1.4	
Plant cover of trees, shrubs, and herbaceous plants	L 1.2	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	L 2.2	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	L 3.1, L 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	L 3.3	

Slope Wetlands

Map of:	To answer questions:	Figure #
Cowardin plant classes	H 1.1, H 1.4	
Hydroperiods	H 1.2	
Plant cover of dense trees, shrubs, and herbaceous plants	S 1.3	
Plant cover of dense, rigid trees, shrubs, and herbaceous plants (<i>can be added to another figure</i>)	S 4.1	
Boundary of area within 150 ft of the wetland (<i>can be added to another figure</i>)	S 2.1, S 5.1	
1 km Polygon: Area that extends 1 km from entire wetland edge - including polygons for accessible habitat and undisturbed habitat	H 2.1, H 2.2, H 2.3	
Screen capture of map of 303(d) listed waters in basin (from Ecology website)	S 3.1, S 3.2	
Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☒ NO - go to 5

☐ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding
from that stream or river,

☒ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☒ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

R 1.0. Does the site have the potential to improve water quality?

R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a flooding event:

Depressions cover $> \frac{3}{4}$ area of wetland	points = 8	2
Depressions cover $> \frac{1}{2}$ area of wetland	points = 4	
Depressions present but cover $< \frac{1}{2}$ area of wetland	points = 2	
No depressions present	points = 0	

R 1.2. Structure of plants in the wetland (areas with $> 90\%$ cover at person height, **not** Cowardin classes)

Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	8
<input checked="" type="checkbox"/> Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
<input type="checkbox"/> Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0	

Total for R 1

Add the points in the boxes above

10**Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 2.0. Does the landscape have the potential to support the water quality function of the site?

R 2.1. Is the wetland within an incorporated city or within its UGA? Yes = 2 No = 0 0

R 2.2. Does the contributing basin to the wetland include a UGA or incorporated area? Yes = 1 No = 0 0

R 2.3. Does at least 10% of the contributing basin contain tilled fields, pastures, or forests that have been clearcut within the last 5 years? Yes = 1 No = 0 0

R 2.4. Is $> 10\%$ of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0 0

R 2.5. Are there other sources of pollutants coming into the wetland that are not listed in questions R 2.1 - R 2.4? 1

Other Sources Stormwater and road runoff. Yes = 1 No = 0

Total for R 2

Add the points in the boxes above

1**Rating of Landscape Potential** If score is: ☐ 3 - 6 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 3.0. Is the water quality improvement provided by the site valuable to society?

R 3.1. Is the wetland along a stream or river that is on the 303(d) list or on a tributary that drains to one within 1 mi? Yes = 1 No = 0 0

R 3.2. Is the wetland along a stream or river that has TMDL limits for nutrients, toxics, or pathogens? Yes = 1 No = 0 0

R 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? (answer YES if there is a TMDL for the drainage in which the unit is found) Yes = 2 No = 0 2

Total for R 3

Add the points in the boxes above

2**Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Hydrologic Functions** - Indicators that site functions to reduce flooding and stream erosion

R 4.0. Does the site have the potential to reduce flooding and erosion?

R 4.1. Characteristics of the overbank storage the wetland provides:

Estimate the average width of the wetland perpendicular to the direction of the flow and the width of the stream or river channel (distance between banks). Calculate the ratio: (average width of wetland)/(average width of stream between banks).

If the ratio is more than 20	points = 9	1
If the ratio is 10 - 20	points = 6	
If the ratio is 5 - < 10	points = 4	
If the ratio is 1 - < 5	points = 2	
If the ratio is < 1	points = 1	

R 4.2. Characteristics of plants that slow down water velocities during floods: *Treat large woody debris as forest or shrub. Choose the points appropriate for the best description (polygons need to have >90% cover at person height. These are NOT Cowardin classes).*

Forest or shrub for > $\frac{1}{3}$ area OR emergent plants > $\frac{2}{3}$ area	points = 7	7
Forest or shrub for > $\frac{1}{10}$ area OR emergent plants > $\frac{1}{3}$ area	points = 4	
Plants do not meet above criteria	points = 0	

Total for R 4 Add the points in the boxes above **8**

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 5.0. Does the landscape have the potential to support the hydrologic functions of the site?

R 5.1. Is the stream or river adjacent to the wetland downcut? Yes = 0 No = 1 1

R 5.2. Does the up-gradient watershed include a UGA or incorporated area? Yes = 1 No = 0 0

R 5.3 Is the up-gradient stream or river controlled by dams? Yes = 0 No = 1 1

Total for R 5 Add the points in the boxes above **2**

Rating of Landscape Potential If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 6.0. Are the hydrologic functions provided by the site valuable to society?

R 6.1. Distance to the nearest areas downstream that have flooding problems?

Choose the description that best fits the site.

The sub-basin immediately down-gradient of the wetland has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	2
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

R 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 0

Total for R 6 Add the points in the boxes above **2**

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input checked="" type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input checked="" type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		5
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input checked="" type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
10		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 81 % undisturbed habitat + (17 % moderate & low intensity land uses / 2) = 89.5%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0		3
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 81 % undisturbed habitat + (17 % moderate & low intensity land uses / 2) = 89.5%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0		3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		0
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		2
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☐ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

- ☒ **NO** - go to 2 ☐ **YES** - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

- ☐ **NO - Saltwater Tidal Fringe (Estuarine)** ☐ **YES - Freshwater Tidal Fringe**
*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*
*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

- ☒ **NO** - go to 3 ☐ **YES** - The wetland class is **Flats**
*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;
☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

- ☒ **NO** - go to 4 ☐ **YES** - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The wetland is on a slope (*slope can be very gradual*),
☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.
☐ The water leaves the wetland **without being impounded**.

- ☒ **NO** - go to 5 ☐ **YES** - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,
☐ The overbank flooding occurs at least once every 2 years.

- ☒ **NO** - go to 6 ☐ **YES** - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as **Depressional** for the rating.*

NOTES and FIELD OBSERVATIONS:

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

D 1.0. Does the site have the potential to improve water quality?		
D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	2
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).		
	Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	5
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:		
<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		2
Area seasonally ponded is > 1/2 total area of wetland	points = 4	
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation**D 4.0. Does the site have the potential to reduce flooding and erosion?****D 4.1. Characteristics of surface water outflows from the wetland:**

- | | | |
|---|------------|---|
| Wetland is a depression or flat depression with no surface water leaving it (no outlet) | points = 4 | 2 |
| Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet | points = 2 | |
| Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch | points = 1 | |
| Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing | points = 0 | |

D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.

- | | | |
|--|------------|---|
| Marks of ponding are 3 ft or more above the surface or bottom of outlet | points = 7 | 3 |
| Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet | points = 5 | |
| <input checked="" type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet | points = 3 | |
| <input type="checkbox"/> The wetland is a "headwater" wetland | points = 3 | |
| Wetland is flat but has small depressions on the surface that trap water | points = 1 | |
| Marks of ponding less than 0.5 ft (6 in) | points = 0 | |

D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.

- | | | |
|---|------------|---|
| <input type="checkbox"/> The area of the basin is less than 10 times the area of the unit | points = 5 | 0 |
| The area of the basin is 10 to 100 times the area of the unit | points = 3 | |
| The area of the basin is more than 100 times the area of the unit | points = 0 | |
| <input type="checkbox"/> Entire wetland is in the Flats class | points = 5 | |

Total for D 4 Add the points in the boxes above **5****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☐ 6 - 11 = M ☒ 0 - 5 = L Record the rating on the first page**D 5.0. Does the landscape have the potential to support hydrologic function of the site?****D 5.1. Does the wetland unit receive stormwater discharges?** Yes = 1 No = 0 **1****D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?** Yes = 1 No = 0 **0****D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?** Yes = 1 No = 0 **0****Total for D 5** Add the points in the boxes above **1****Rating of Landscape Potential** If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page**D 6.0. Are the hydrologic functions provided by the site valuable to society?****D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.**

- | | | |
|--|------------|---|
| The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon redds): | | 1 |
| <ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. | points = 2 | |
| <input checked="" type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. | points = 1 | |
| <input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin. | points = 1 | |
| <input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why | points = 0 | |
| <input type="checkbox"/> There are no problems with flooding downstream of the wetland. | points = 0 | |

D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan? Yes = 2 No = 0 **0****Total for D 6** Add the points in the boxes above **1****Rating of Value** If score is: ☐ 2 - 4 = H ☒ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

All three diagrams in this row are
HIGH = 3 points

1

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		4
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
10		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L <i>Record the rating on the first page</i>		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 82 % undisturbed habitat + (<u>16</u> % moderate & low intensity land uses / 2) = 90%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	2	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 82 % undisturbed habitat + (<u>16</u> % moderate & low intensity land uses / 2) = 90%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	2	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		4
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L <i>Record the rating on the first page</i>		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated. Site meets ANY of the following criteria: points = 2		
<input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan	2	
Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L <i>Record the rating on the first page</i>		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ NO - go to 6

☐ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

SLOPE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

S 1.0. Does the site have the potential to improve water quality?

S 1.1. Characteristics of the average slope of the wetland: (*a 1% slope has a 1 ft vertical drop in elevation for every 100 ft of horizontal distance*)

Slope is 1% or less	points = 3	0
Slope is > 1% - 2%	points = 2	
Slope is > 2% - 5%	points = 1	
Slope is greater than 5%	points = 0	

S 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions):

Yes = 3 No = 0

0

S 1.3. Characteristics of the plants in the wetland that trap sediments and pollutants:

Choose the points appropriate for the description that best fits the plants in the wetland. *Dense means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 in.*

Dense, uncut, herbaceous plants > 90% of the wetland area	points = 6	3
Dense, uncut, herbaceous plants > 1/2 of area	points = 3	
Dense, woody, plants > 1/2 of area	points = 2	
Dense, uncut, herbaceous plants > 1/4 of area	points = 1	
Does not meet any of the criteria above for plants	points = 0	

Total for S 1

Add the points in the boxes above

3

Rating of Site Potential If score is: ☐ 12 = H ☐ 6 - 11 = M ☒ 0 - 5 = L

Record the rating on the first page

S 2.0. Does the landscape have the potential to support the water quality function of the site?

S 2.1. Is > 10% of the area within 150 ft on the uphill side of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

0

S 2.2. Are there other sources of pollutants coming into the wetland that are not listed in question S 2.1?

Other Sources Yes = 1 No = 0

0

Total for S 2

Add the points in the boxes above

0

Rating of Landscape Potential If score is: ☐ 1 - 2 = M ☒ 0 = L

Record the rating on the first page

S 3.0. Is the water quality improvement provided by the site valuable to society?

S 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?

Yes = 1 No = 0

0

S 3.2. Is the wetland in a basin or sub-basin where water quality is an issue? *At least one aquatic resource in the basin is on the 303(d) list.*

Yes = 1 No = 0

0

S 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? *Answer YES if there is a TMDL for the basin in which the unit is found?*

Yes = 2 No = 0

2

Total for S 3

Add the points in the boxes above

2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

SLOPE WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream erosion

S 4.0. Does the site have the potential to reduce flooding and stream erosion?

S 4.1. Characteristics of plants that reduce the velocity of surface flows during storms: Choose the points appropriate for the description that best fits conditions in the wetland. <i>Stems of plants should be thick enough (usually > 1/8 in), or dense enough, to remain erect during surface flows.</i>	0
Dense, uncut, rigid plants cover > 90% of the area of the wetland	points = 1
All other conditions	points = 0

Rating of Site Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 5.0. Does the landscape have the potential to support hydrologic functions of the site?

S 5.1. Is more than 25% of the area within 150 ft upslope of wetland in land uses or cover that generate excess surface runoff?	Yes = 1 No = 0	0
---	----------------	---

Rating of Landscape Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 6.0. Are the hydrologic functions provided by the site valuable to society?

S 6.1. Distance to the nearest areas downstream that have flooding problems:		
The sub-basin immediately down-gradient of site has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	2
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

S 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?	Yes = 2 No = 0	0
--	----------------	---

Total for S 6	Add the points in the boxes above	2
---------------	-----------------------------------	---

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

NOTES and FIELD OBSERVATIONS:

These questions apply to wetlands of all HGM classes.**HABITAT FUNCTIONS** - Indicators that site functions to provide important habitat**H 1.0. Does the site have the potential to provide habitat?**

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|----------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 3 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input checked="" type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

**None** = 0 points**Low** = 1 point**Moderate** = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		4
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 63 % undisturbed habitat + (<u>8</u> % moderate & low intensity land uses / 2) = 67%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0	3	
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 83 % undisturbed habitat + (<u>15</u> % moderate & low intensity land uses / 2) = 90.5%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0	3	
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0	2	
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☒ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>	

Portions of the wetland boundary, that extend beyond the project, were estimated to complete the wetland rating. Refer to the JARPA figures for the surveyed wetland boundary.

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands.*

*If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.
Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ NO - go to 6

☐ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

SLOPE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

S 1.0. Does the site have the potential to improve water quality?

S 1.1. Characteristics of the average slope of the wetland: (*a 1% slope has a 1 ft vertical drop in elevation for every 100 ft of horizontal distance*)

Slope is 1% or less	points = 3	1
Slope is > 1% - 2%	points = 2	
Slope is > 2% - 5%	points = 1	
Slope is greater than 5%	points = 0	

S 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions):

Yes = 3 No = 0

0

S 1.3. Characteristics of the plants in the wetland that trap sediments and pollutants:

Choose the points appropriate for the description that best fits the plants in the wetland. *Dense means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 in.*

Dense, uncut, herbaceous plants > 90% of the wetland area	points = 6	2
Dense, uncut, herbaceous plants > ½ of area	points = 3	
Dense, woody, plants > ½ of area	points = 2	
Dense, uncut, herbaceous plants > ¼ of area	points = 1	
Does not meet any of the criteria above for plants	points = 0	

Total for S 1

Add the points in the boxes above

3

Rating of Site Potential If score is: ☐ 12 = H ☐ 6 - 11 = M ☒ 0 - 5 = L

Record the rating on the first page

S 2.0. Does the landscape have the potential to support the water quality function of the site?

S 2.1. Is > 10% of the area within 150 ft on the uphill side of the wetland in land uses that generate pollutants?

Yes = 1 No = 0

1

S 2.2. Are there other sources of pollutants coming into the wetland that are not listed in question S 2.1?

Other Sources Yes = 1 No = 0

0

Total for S 2

Add the points in the boxes above

1

Rating of Landscape Potential If score is: ☒ 1 - 2 = M ☐ 0 = L

Record the rating on the first page

S 3.0. Is the water quality improvement provided by the site valuable to society?

S 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?

Yes = 1 No = 0

0

S 3.2. Is the wetland in a basin or sub-basin where water quality is an issue? *At least one aquatic resource in the basin is on the 303(d) list.*

Yes = 1 No = 0

0

S 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? *Answer YES if there is a TMDL for the basin in which the unit is found?*

Yes = 2 No = 0

2

Total for S 3

Add the points in the boxes above

2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

SLOPE WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream erosion

S 4.0. Does the site have the potential to reduce flooding and stream erosion?

S 4.1. Characteristics of plants that reduce the velocity of surface flows during storms: Choose the points appropriate for the description that best fits conditions in the wetland. <i>Stems of plants should be thick enough (usually > 1/8 in), or dense enough, to remain erect during surface flows.</i>	0
Dense, uncut, rigid plants cover > 90% of the area of the wetland	points = 1
All other conditions	points = 0

Rating of Site Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 5.0. Does the landscape have the potential to support hydrologic functions of the site?

S 5.1. Is more than 25% of the area within 150 ft upslope of wetland in land uses or cover that generate excess surface runoff?	Yes = 1 No = 0	0
---	----------------	---

Rating of Landscape Potential If score is: ☐ 1 = M ☒ 0 = L

Record the rating on the first page

S 6.0. Are the hydrologic functions provided by the site valuable to society?

S 6.1. Distance to the nearest areas downstream that have flooding problems:		
The sub-basin immediately down-gradient of site has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	2
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	

S 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?	Yes = 2 No = 0	0
--	----------------	---

Total for S 6	Add the points in the boxes above	2
---------------	-----------------------------------	---

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

NOTES and FIELD OBSERVATIONS:

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|--|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 2 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input checked="" type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input checked="" type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 2 |
| <input checked="" type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 2 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

2

All three diagrams
in this row are
HIGH = 3 points

H 1.5. Special habitat features: Check the habitat features that are present in the wetland. <i>The number of checks is the number of points.</i>		5
<input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long) <input checked="" type="checkbox"/> Standing snags (dbh > 4 in) within the wetland <input checked="" type="checkbox"/> Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m) <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet weathered where wood is exposed</i>) <input checked="" type="checkbox"/> At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>) <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)		
Total for H 1 Add the points in the boxes above		
13		
Rating of Site Potential If Score is: <input type="checkbox"/> 15 - 18 = H <input checked="" type="checkbox"/> 7 - 14 = M <input type="checkbox"/> 0 - 6 = L Record the rating on the first page		

H 2.0. Does the landscape have the potential to support the habitat function of the site?		
H 2.1 Accessible habitat (include <i>only habitat that directly abuts wetland unit</i>). <i>Calculate:</i> 81 % undisturbed habitat + (18 % moderate & low intensity land uses / 2) = 90%		
If total accessible habitat is: > 1/3 (33.3%) of 1 km Polygon points = 3 20 - 33% of 1 km Polygon points = 2 10 - 19% of 1 km Polygon points = 1 < 10 % of 1 km Polygon points = 0		3
H 2.2. Undisturbed habitat in 1 km Polygon around the wetland. <i>Calculate:</i> 81 % undisturbed habitat + (18 % moderate & low intensity land uses / 2) = 90%		
Undisturbed habitat > 50% of Polygon points = 3 Undisturbed habitat 10 - 50% and in 1-3 patches points = 2 Undisturbed habitat 10 - 50% and > 3 patches points = 1 Undisturbed habitat < 10% of 1 km Polygon points = 0		3
H 2.3 Land use intensity in 1 km Polygon: If > 50% of 1 km Polygon is high intensity land use points = (-2) ≤ 50% of 1km Polygon is high intensity points = 0		0
Total for H 2 Add the points in the boxes above		6
Rating of Landscape Potential If Score is: <input checked="" type="checkbox"/> 4 - 6 = H <input type="checkbox"/> 1 - 3 = M <input type="checkbox"/> < 1 = L Record the rating on the first page		

H 3.0. Is the habitat provided by the site valuable to society?		
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.		
Site meets ANY of the following criteria: points = 2 <input checked="" type="checkbox"/> It has 3 or more priority habitats within 100 m (see next page) <input type="checkbox"/> It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists) <input type="checkbox"/> It is mapped as a location for an individual WDFW priority species <input type="checkbox"/> It is a Wetland of High Conservation Value as determined by the Department of Natural Resources <input type="checkbox"/> It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan Site has 1 or 2 priority habitats (listed on next page) with in 100m points = 1 Site does not meet any of the criteria above points = 0		2
Rating of Value If Score is: <input checked="" type="checkbox"/> 2 = H <input type="checkbox"/> 1 = M <input type="checkbox"/> 0 = L Record the rating on the first page		

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions? <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No = Is not a bog	

<p>SC 4.0. Forested Wetlands</p> <p>Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? <i>If you answer YES you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).</p> <p><input type="checkbox"/> Yes = Category I <input checked="" type="checkbox"/> No = Not a forested wetland for this section</p>	
<p>SC 5.0. Wetlands in Coastal Lagoons</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p><input type="checkbox"/> The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>)</p> <p><input type="checkbox"/> Yes - Go to SC 5.1 <input checked="" type="checkbox"/> No = Not a wetland in a coastal lagoon</p> <p>SC 5.1. Does the wetland meet all of the following three conditions?</p> <p><input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).</p> <p><input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 ac (4350 ft²)</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II</p>	
<p>SC 6.0. Interdunal Wetlands</p> <p>Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If you answer yes you will still need to rate the wetland based on its habitat functions.</i></p> <p>In practical terms that means the following geographic areas:</p> <p><input type="checkbox"/> Long Beach Peninsula: Lands west of SR 103</p> <p><input type="checkbox"/> Grayland-Westport: Lands west of SR 105</p> <p><input type="checkbox"/> Ocean Shores-Copalis: Lands west of SR 115 and SR 109</p> <p><input type="checkbox"/> Yes - Go to SC 6.1 <input checked="" type="checkbox"/> No = Not an interdunal wetland for rating</p> <p>SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?</p> <p><input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 6.2</p> <p>SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?</p> <p><input type="checkbox"/> Yes = Category II <input type="checkbox"/> No - Go to SC 6.3</p> <p>SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?</p> <p><input type="checkbox"/> Yes = Category III <input type="checkbox"/> No = Category IV</p>	
<p>Category of wetland based on Special Characteristics</p> <p>If you answered No for all types, enter "Not Applicable" on Summary Form</p>	

Portions of the wetland boundary, that extend beyond the project, were estimated to complete the wetland rating. Refer to the JARPA figures for the surveyed wetland boundary.

Screen capture of list of TMDLs for WRIA in which unit is found (from web)	S 3.3	

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.

Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*),

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

☒ NO - go to 5

☐ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☐ The overbank flooding occurs at least once every 2 years.

☒ NO - go to 6

☐ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☐ NO - go to 7

☒ **YES** - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ **YES** - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

Wetland name or number DC-06

DEPRESSIONAL AND FLATS WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

D 1.0. Does the site have the potential to improve water quality?		
D 1.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet).	points = 3	1
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	points = 2	
<input checked="" type="checkbox"/> Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 1	
<input type="checkbox"/> Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.	points = 1	
D 1.2. The soil 2 in below the surface (or duff layer) is true clay or true organic (use NRCS definitions).		
	Yes = 4 No = 0	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):		
Wetland has persistent, ungrazed, plants > 95% of area	points = 5	5
Wetland has persistent, ungrazed, plants > 1/2 of area	points = 3	
Wetland has persistent, ungrazed plants > 1/10 of area	points = 1	
Wetland has persistent, ungrazed plants < 1/10 of area	points = 0	
D 1.4. Characteristics of seasonal ponding or inundation:		
<i>This is the area that is ponded for at least 2 months. See description in manual.</i>		
Area seasonally ponded is > 1/2 total area of wetland	points = 4	0
Area seasonally ponded is > 1/4 total area of wetland	points = 2	
Area seasonally ponded is < 1/4 total area of wetland	points = 0	
Total for D 1		6

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

D 2.0. Does the landscape have the potential to support the water quality function of the site?		
D 2.1. Does the wetland unit receive stormwater discharges?	Yes = 1 No = 0	1
D 2.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland?	Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1 - D 2.3?		1
Source <u>Vehicle emission particulates and roadside debris</u>	Yes = 1 No = 0	
Total for D 2		3

Rating of Landscape Potential If score is ☒ 3 or 4 = H ☐ 1 or 2 = M ☐ 0 = L Record the rating on the first page

D 3.0. Is the water quality improvement provided by the site valuable to society?		
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list?	Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list?	Yes = 1 No = 0	0
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality (answer YES if there is a TMDL for the basin in which the unit is found)?	Yes = 2 No = 0	2

DEPRESSIONAL AND FLATS WETLANDS**Hydrologic Functions** - Indicators that the site functions to reduce flooding and stream degradation

D 4.0. Does the site have the potential to reduce flooding and erosion?		
D 4.1. Characteristics of surface water outflows from the wetland:		
Wetland is a depression or flat depression with no surface water leaving it (no outlet)	points = 4	0
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet	points = 2	
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch	points = 1	
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing	points = 0	
D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.		
Marks of ponding are 3 ft or more above the surface or bottom of outlet	points = 7	0
Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet	points = 5	
<input type="checkbox"/> Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet	points = 3	
<input type="checkbox"/> The wetland is a "headwater" wetland	points = 3	
Wetland is flat but has small depressions on the surface that trap water	points = 1	
Marks of ponding less than 0.5 ft (6 in)	points = 0	
D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland unit itself.		
<input type="checkbox"/> The area of the basin is less than 10 times the area of the unit	points = 5	3
The area of the basin is 10 to 100 times the area of the unit	points = 3	
The area of the basin is more than 100 times the area of the unit	points = 0	
<input type="checkbox"/> Entire wetland is in the Flats class	points = 5	
Total for D 4		3

Add the points in the boxes above

Rating of Site Potential If score is: ☐ 12 - 16 = H ☐ 6 - 11 = M ☒ 0 - 5 = L Record the rating on the first page

D 5.0. Does the landscape have the potential to support hydrologic function of the site?		
D 5.1. Does the wetland unit receive stormwater discharges?	Yes = 1 No = 0	1
D 5.2. Is > 10% of the area within 150 ft of the wetland in land uses that generate excess runoff?	Yes = 1 No = 0	1
D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at >1 residence/ac, urban, commercial, agriculture, etc.)?	Yes = 1 No = 0	0
Total for D 5		2

Add the points in the boxes above

Rating of Landscape Potential If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

D 6.0. Are the hydrologic functions provided by the site valuable to society?		
D 6.1. The unit is in a landscape that has flooding problems. Choose the description that best matches conditions around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is met.		
The wetland captures surface water that would otherwise flow down-gradient into areas where flooding has damaged human or natural resources (e.g., houses or salmon		2
<ul style="list-style-type: none"> • Flooding occurs in a sub-basin that is immediately down-gradient of unit. 	points = 2	
<input checked="" type="checkbox"/> <ul style="list-style-type: none"> • Surface flooding problems are in a sub-basin farther down-gradient. 	points = 1	
<input type="checkbox"/> Flooding from groundwater is an issue in the sub-basin.	points = 1	
<input type="checkbox"/> The existing or potential outflow from the wetland is so constrained by human or natural conditions that the water stored by the wetland cannot reach areas that flood. Explain why	points = 0	
<input type="checkbox"/> There are no problems with flooding downstream of the wetland.	points = 0	
D 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?		
	Yes = 2 No = 0	0

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 0 |
| <input type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|--|-------------------------------------|-----------------|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 0 |
| <input type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | | 2 points |
| <input type="checkbox"/> Freshwater tidal wetland | | 2 points |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 0 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersions among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

All three diagrams in this row are
HIGH = 3 points

0

H 1.5. Special habitat features.

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ☒ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)
- ☐ Standing snags (dbh > 4 in) within the wetland
- ☐ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ☐ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (*cut shrubs or trees that have not yet weathered where wood is exposed*)
- ☐ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (*structures for egg-laying by*)
- ☒ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)

2

Total for H 1

Add the points in the boxes above

2

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☐ 7 - 14 = M ☒ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?

H 2.1 Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate:

$$30\% \text{ undisturbed habitat} + \frac{10\% \text{ moderate \& low intensity land uses}}{2} = 35\%$$

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon

points = 3

20 - 33% of 1 km Polygon

points = 2

10 - 19% of 1 km Polygon

points = 1

< 10 % of 1 km Polygon

points = 0

3

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate:

$$70\% \text{ undisturbed habitat} + \frac{20\% \text{ moderate \& low intensity land uses}}{2} = 80\%$$

Undisturbed habitat > 50% of Polygon

points = 3

Undisturbed habitat 10 - 50% and in 1-3 patches

points = 2

Undisturbed habitat 10 - 50% and > 3 patches

points = 1

Undisturbed habitat < 10% of 1 km Polygon

points = 0

3

H 2.3 Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use

points = (-2)

≤ 50% of 1km Polygon is high intensity

points = 0

0

Total for H 2

Add the points in the boxes above

6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose *only the highest score that applies to the wetland being rated*.

Site meets ANY of the following criteria:

points = 2

- ☒ It has 3 or more priority habitats within 100 m (see next page)

- ☐ It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)

- ☐ It is mapped as a location for an individual WDFW priority species

- ☐ It is a Wetland of High Conservation Value as determined by the Department of Natural Resources

- ☐ It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100m

points = 1

Site does not meet any of the criteria above

points = 0

2

Wetland name or number DC-06

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they

Wetland name or number, DC-06
are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland </div>	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2 </div>	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II </div>	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 2.2 <input checked="" type="checkbox"/> No - Go to SC 2.3 </div>	
SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <div style="text-align: right;"> <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input checked="" type="checkbox"/> No = Not WHCV </div>	
SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <div style="text-align: right;"> <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV </div>	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i>	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 </div>	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <div style="text-align: right;"> <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog </div>	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <div style="text-align: right;"> <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 </div>	
NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog.	
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?	

Wetland name or number DC-06 ☐ Yes = **Is a Category I bog** ☐ No = **Is not a bog**

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least $\frac{3}{4}$ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than $\frac{1}{10}$ ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.

Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☒ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☒ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

Wetland name or number DC-07

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

R 1.0. Does the site have the potential to improve water quality?

R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a flooding event:

Depressions cover $> \frac{3}{4}$ area of wetland	points = 8	2
Depressions cover $> \frac{1}{2}$ area of wetland	points = 4	
Depressions present but cover $< \frac{1}{2}$ area of wetland	points = 2	
No depressions present	points = 0	

R 1.2. Structure of plants in the wetland (areas with $>90\%$ cover at person height, **not** Cowardin classes)

Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	6
<input checked="" type="checkbox"/> Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
<input type="checkbox"/> Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0	

Total for R 1 Add the points in the boxes above **8****Rating of Site Potential** If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 2.0. Does the landscape have the potential to support the water quality function of the site?

R 2.1. Is the wetland within an incorporated city or within its UGA? Yes = 2 No = 0 0

R 2.2. Does the contributing basin to the wetland include a UGA or incorporated area? Yes = 1 No = 0 0

R 2.3. Does at least 10% of the contributing basin contain tilled fields, pastures, or forests that have been clearcut within the last 5 years? Yes = 1 No = 0 0

R 2.4. Is $> 10\%$ of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0 1

R 2.5. Are there other sources of pollutants coming into the wetland that are not listed in questions R 2.1 - R 2.4? 1

Other Sources Roadside debris and emission particulates Yes = 1 No = 0Total for R 2 Add the points in the boxes above **2****Rating of Landscape Potential** If score is: ☐ 3 - 6 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 3.0. Is the water quality improvement provided by the site valuable to society?

R 3.1. Is the wetland along a stream or river that is on the 303(d) list or on a tributary that drains to one within 1 mi? Yes = 1 No = 0 0

R 3.2. Is the wetland along a stream or river that has TMDL limits for nutrients, toxics, or pathogens? Yes = 1 No = 0 0

R 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? (answer YES if there is a TMDL for the drainage in which the unit is found) Yes = 2 No = 0 2

Total for R 3 Add the points in the boxes above **2****Rating of Value** If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Hydrologic Functions** - Indicators that site functions to reduce flooding and stream erosion

R 4.0. Does the site have the potential to reduce flooding and erosion?		
R 4.1. Characteristics of the overbank storage the wetland provides: <i>Estimate the average width of the wetland perpendicular to the direction of the flow and the width of the stream or river channel (distance between banks). Calculate the ratio: (average width of wetland)/(average width of stream between banks).</i>		
If the ratio is more than 20	points = 9	4
If the ratio is 10 - 20	points = 6	
If the ratio is 5 - < 10	points = 4	
If the ratio is 1 - < 5	points = 2	
If the ratio is < 1	points = 1	
R 4.2. Characteristics of plants that slow down water velocities during floods: <i>Treat large woody debris as forest or shrub. Choose the points appropriate for the best description (polygons need to have >90% cover at person height. These are <u>NOT</u> Cowardin classes).</i>		
Forest or shrub for > 1/3 area OR emergent plants > 2/3 area	points = 7	7
Forest or shrub for > 1/10 area OR emergent plants > 1/3 area	points = 4	
Plants do not meet above criteria	points = 0	
Total for R 4		Add the points in the boxes above 11

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 5.0. Does the landscape have the potential to support the hydrologic functions of the site?		
R 5.1. Is the stream or river adjacent to the wetland downcut?	Yes = 0 No = 1	0
R 5.2. Does the up-gradient watershed include a UGA or incorporated area?	Yes = 1 No = 0	0
R 5.3 Is the up-gradient stream or river controlled by dams?	Yes = 0 No = 1	1
Total for R 5		Add the points in the boxes above 1

Rating of Landscape Potential If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 6.0. Are the hydrologic functions provided by the site valuable to society?		
R 6.1. Distance to the nearest areas downstream that have flooding problems? <i>Choose the description that best fits the site.</i>		
The sub-basin immediately down-gradient of the wetland has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	1
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	
R 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?		
Yes = 2 No = 0		0
Total for R 6		Add the points in the boxes above 1

Rating of Value If score is: ☐ 2 - 4 = H ☒ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|---|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | 2 points | |
| <input type="checkbox"/> Freshwater tidal wetland | 2 points | |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle*

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersions among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams in this row are
HIGH = 3 points

H 1.5. Special habitat features.

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ☒ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)
- ☐ Standing snags (dbh > 4 in) within the wetland
- ☒ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ☐ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (*cut shrubs or trees that have not yet weathered where wood is exposed*)
- ☐ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (*structures for egg-laying by*)
- ☒ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)

3

Total for H 1

Add the points in the boxes above

7

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?

H 2.1 Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate:

30 % undisturbed habitat + 10 % moderate & low intensity land uses / 2) = 35%

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon

points = 3

20 - 33% of 1 km Polygon

points = 2

10 - 19% of 1 km Polygon

points = 1

< 10 % of 1 km Polygon

points = 0

3

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate:

70 % undisturbed habitat + 20 % moderate & low intensity land uses / 2) = 80%

Undisturbed habitat > 50% of Polygon

points = 3

Undisturbed habitat 10 - 50% and in 1-3 patches

points = 2

Undisturbed habitat 10 - 50% and > 3 patches

points = 1

Undisturbed habitat < 10% of 1 km Polygon

points = 0

3

H 2.3 Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use

points = (-2)

≤ 50% of 1km Polygon is high intensity

points = 0

0

Total for H 2

Add the points in the boxes above

6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? *Choose only the highest score that applies to the wetland being rated.*

Site meets ANY of the following criteria:

points = 2

☒ It has 3 or more priority habitats within 100 m (see next page)☐ It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)☐ It is mapped as a location for an individual WDFW priority species☐ It is a Wetland of High Conservation Value as determined by the Department of Natural Resources☐ It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100m

points = 1

Site does not meet any of the criteria above

points = 0

2

Wetland name or number DC-07

Rating of Value If Score is: ☒ 2 = H ☐ 1 = M ☐ 0 = L

Record the rating on the first page

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they

Wetland name or number, DC-07
are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input checked="" type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input checked="" type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?	

Wetland name or number DC-07 ☐ Yes = **Is a Category I bog** ☐ No = **Is not a bog**

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than 1/10 ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

HGM Classification of Wetland in Western Washington

For questions 1 -7, the criteria described must apply to the entire unit being rated.
If hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1 - 7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe** - go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

☐ YES - **Freshwater Tidal Fringe**

*If your wetland can be classified as a Freshwater Tidal Fringe use the forms for **Riverine** wetlands. If it is Saltwater Tidal Fringe it is an **Estuarine** wetland and is not scored. This method **cannot** be used to score functions for estuarine wetlands.*

2. The entire wetland unit is flat and precipitation is the only source (>90%) of water to it.

Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3

☐ YES - The wetland class is **Flats**

*If your wetland can be classified as a Flats wetland, use the form for **Depressional** wetlands.*

3. Does the entire wetland unit **meet all** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 ft (2 m).

☒ NO - go to 4

☐ YES - The wetland class is **Lake Fringe** (Lacustrine Fringe)

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*),

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

☐ NO - go to 5

☒ YES - The wetland class is **Slope**

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

5. Does the entire wetland unit **meet all** of the following criteria?

☒ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

☒ The overbank flooding occurs at least once every 2 years.

☐ NO - go to 6

☒ YES - The wetland class is **Riverine**

NOTE: The Riverine unit can contain depressions that are filled with water when the river is not flooding.

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

☒ NO - go to 7

☐ YES - The wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched, but has no obvious natural outlet.

☒ NO - go to 8

☐ YES - The wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream within boundary of depression	Depressional
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE

*If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating.*

NOTES and FIELD OBSERVATIONS:

Wetland name or number DC-08

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Water Quality Functions** - Indicators that the site functions to improve water quality

R 1.0. Does the site have the potential to improve water quality?		
R 1.1. Area of surface depressions within the Riverine wetland that can trap sediments during a flooding event:		
Depressions cover $> \frac{3}{4}$ area of wetland	points = 8	4
Depressions cover $> \frac{1}{2}$ area of wetland	points = 4	
Depressions present but cover $< \frac{1}{2}$ area of wetland	points = 2	
No depressions present	points = 0	
R 1.2. Structure of plants in the wetland (areas with $>90\%$ cover at person height, not Cowardin classes)		
Trees or shrubs $> \frac{2}{3}$ area of the wetland	points = 8	6
<input checked="" type="checkbox"/> Trees or shrubs $> \frac{1}{3}$ area of the wetland	points = 6	
<input type="checkbox"/> Herbaceous plants (> 6 in high) $> \frac{2}{3}$ area of the wetland	points = 6	
Herbaceous plants (> 6 in high) $> \frac{1}{3}$ area of the wetland	points = 3	
Trees, shrubs, and ungrazed herbaceous $< \frac{1}{3}$ area of the wetland	points = 0	
Total for R 1		Add the points in the boxes above
		10

Rating of Site Potential If score is: ☐ 12 - 16 = H ☒ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 2.0. Does the landscape have the potential to support the water quality function of the site?		
R 2.1. Is the wetland within an incorporated city or within its UGA?	Yes = 2 No = 0	0
R 2.2. Does the contributing basin to the wetland include a UGA or incorporated area?	Yes = 1 No = 0	0
R 2.3. Does at least 10% of the contributing basin contain tilled fields, pastures, or forests that have been clearcut within the last 5 years?	Yes = 1 No = 0	0
R 2.4. Is $> 10\%$ of the area within 150 ft of the wetland in land uses that generate pollutants?	Yes = 1 No = 0	1
R 2.5. Are there other sources of pollutants coming into the wetland that are not listed in questions R 2.1 - R 2.4?		1
Other Sources <u>Roadside debris and vehicle emission particulates</u>		Yes = 1 No = 0
Total for R 2		Add the points in the boxes above
		2

Rating of Landscape Potential If score is: ☐ 3 - 6 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 3.0. Is the water quality improvement provided by the site valuable to society?		
R 3.1. Is the wetland along a stream or river that is on the 303(d) list or on a tributary that drains to one within 1 mi?	Yes = 1 No = 0	0
R 3.2. Is the wetland along a stream or river that has TMDL limits for nutrients, toxics, or pathogens?	Yes = 1 No = 0	0
R 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? (answer YES if there is a TMDL for the drainage in which the unit is found)	Yes = 2 No = 0	2
Total for R 3		Add the points in the boxes above
		2

Rating of Value If score is: ☒ 2 - 4 = H ☐ 1 = M ☐ 0 = L Record the rating on the first page

RIVERINE AND FRESHWATER TIDAL FRINGE WETLANDS**Hydrologic Functions** - Indicators that site functions to reduce flooding and stream erosion

R 4.0. Does the site have the potential to reduce flooding and erosion?		
R 4.1. Characteristics of the overbank storage the wetland provides: <i>Estimate the average width of the wetland perpendicular to the direction of the flow and the width of the stream or river channel (distance between banks). Calculate the ratio: (average width of wetland)/(average width of stream between banks).</i>		
If the ratio is more than 20	points = 9	6
If the ratio is 10 - 20	points = 6	
If the ratio is 5 - < 10	points = 4	
If the ratio is 1 - < 5	points = 2	
If the ratio is < 1	points = 1	
R 4.2. Characteristics of plants that slow down water velocities during floods: <i>Treat large woody debris as forest or shrub. Choose the points appropriate for the best description (polygons need to have >90% cover at person height. These are <u>NOT</u> Cowardin classes).</i>		
Forest or shrub for > $\frac{1}{3}$ area OR emergent plants > $\frac{2}{3}$ area	points = 7	7
Forest or shrub for > $\frac{1}{10}$ area OR emergent plants > $\frac{1}{3}$ area	points = 4	
Plants do not meet above criteria	points = 0	
Total for R 4		Add the points in the boxes above 13

Rating of Site Potential If score is: ☒ 12 - 16 = H ☐ 6 - 11 = M ☐ 0 - 5 = L Record the rating on the first page

R 5.0. Does the landscape have the potential to support the hydrologic functions of the site?		
R 5.1. Is the stream or river adjacent to the wetland downcut?	Yes = 0 No = 1	0
R 5.2. Does the up-gradient watershed include a UGA or incorporated area?	Yes = 1 No = 0	0
R 5.3 Is the up-gradient stream or river controlled by dams?	Yes = 0 No = 1	1
Total for R 5		Add the points in the boxes above 1

Rating of Landscape Potential If score is: ☐ 3 = H ☒ 1 or 2 = M ☐ 0 = L Record the rating on the first page

R 6.0. Are the hydrologic functions provided by the site valuable to society?		
R 6.1. Distance to the nearest areas downstream that have flooding problems? <i>Choose the description that best fits the site.</i>		
The sub-basin immediately down-gradient of the wetland has flooding problems that result in damage to human or natural resources (e.g., houses or salmon redds)	points = 2	1
Surface flooding problems are in a sub-basin farther down-gradient	points = 1	
No flooding problems anywhere downstream	points = 0	
R 6.2. Has the site been identified as important for flood storage or flood conveyance in a regional flood control plan?		
Yes = 2 No = 0		0
Total for R 6		Add the points in the boxes above 1

Rating of Value If score is: ☐ 2 - 4 = H ☒ 1 = M ☐ 0 = L Record the rating on the first page

These questions apply to wetlands of all HGM classes.

HABITAT FUNCTIONS - Indicators that site functions to provide important habitat

H 1.0. Does the site have the potential to provide habitat?

H 1.1. Structure of plant community: *Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac or more than 10% of the unit if it is smaller than 2.5 ac. Add the number of structures checked.*

- | | | |
|---|----------------------------------|---|
| <input type="checkbox"/> Aquatic bed | 4 structures or more: points = 4 | 1 |
| <input checked="" type="checkbox"/> Emergent | 3 structures: points = 2 | |
| <input checked="" type="checkbox"/> Scrub-shrub (areas where shrubs have > 30% cover) | 2 structures: points = 1 | |
| <input type="checkbox"/> Forested (areas where trees have > 30% cover) | 1 structure: points = 0 | |
| <i>If the unit has a Forested class, check if:</i> | | |
| <input type="checkbox"/> The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the Forested polygon | | |

H 1.2. Hydroperiods

Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland or ¼ ac to count (*see text for descriptions of hydroperiods*).

- | | | |
|---|-------------------------------------|---|
| <input type="checkbox"/> Permanently flooded or inundated | 4 or more types present: points = 3 | 1 |
| <input type="checkbox"/> Seasonally flooded or inundated | 3 types present: points = 2 | |
| <input type="checkbox"/> Occasionally flooded or inundated | 2 types present: points = 1 | |
| <input checked="" type="checkbox"/> Saturated only | 1 types present: points = 0 | |
| <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland | | |
| <input checked="" type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland | | |
| <input type="checkbox"/> Lake Fringe wetland | 2 points | |
| <input type="checkbox"/> Freshwater tidal wetland | 2 points | |

H 1.3. Richness of plant species

Count the number of plant species in the wetland that cover at least 10 ft². *Different patches of the same species can be combined to meet the size threshold and you do not have to name the species. **Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canadian thistle***

- | | | | |
|-----------------|----------------|------------|---|
| If you counted: | > 19 species | points = 2 | 1 |
| | 5 - 19 species | points = 1 | |
| | < 5 species | points = 0 | |

H 1.4. Interspersion of habitats

Decide from the diagrams below whether interspersions among Cowardin plants classes (described in H 1.1), or the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. *If you have four or more plant classes or three classes and open water, the rating is always high.*

None = 0 points

Low = 1 point

Moderate = 2 points

1

All three diagrams in this row are
HIGH = 3 points

H 1.5. Special habitat features.

Check the habitat features that are present in the wetland. *The number of checks is the number of points.*

- ☒ Large, downed, woody debris within the wetland (> 4 in diameter and 6 ft long)
- ☒ Standing snags (dbh > 4 in) within the wetland
- ☒ Undercut banks are present for at least 6.6 ft (2 m) **and/or** overhanging plants extends at least 3.3 ft (1 m) over a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)
- ☐ Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree slope) OR signs of recent beaver activity are present (*cut shrubs or trees that have not yet weathered where wood is exposed*)
- ☐ At least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are permanently or seasonally inundated (*structures for egg-laying by*)
- ☒ Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 for list of strata)

4

Total for H 1

Add the points in the boxes above

8

Rating of Site Potential If Score is: ☐ 15 - 18 = H ☒ 7 - 14 = M ☐ 0 - 6 = L Record the rating on the first page

H 2.0. Does the landscape have the potential to support the habitat function of the site?

H 2.1 Accessible habitat (include *only habitat that directly abuts wetland unit*).

Calculate:

$$50 \% \text{ undisturbed habitat} + \frac{10 \% \text{ moderate \& low intensity land uses}}{2} = 55\%$$

If total accessible habitat is:

> 1/3 (33.3%) of 1 km Polygon

points = 3

20 - 33% of 1 km Polygon

points = 2

10 - 19% of 1 km Polygon

points = 1

< 10 % of 1 km Polygon

points = 0

3

H 2.2. Undisturbed habitat in 1 km Polygon around the wetland.

Calculate:

$$70 \% \text{ undisturbed habitat} + \frac{20 \% \text{ moderate \& low intensity land uses}}{2} = 80\%$$

Undisturbed habitat > 50% of Polygon

points = 3

Undisturbed habitat 10 - 50% and in 1-3 patches

points = 2

Undisturbed habitat 10 - 50% and > 3 patches

points = 1

Undisturbed habitat < 10% of 1 km Polygon

points = 0

3

H 2.3 Land use intensity in 1 km Polygon: If

> 50% of 1 km Polygon is high intensity land use

points = (-2)

≤ 50% of 1km Polygon is high intensity

points = 0

0

Total for H 2

Add the points in the boxes above

6

Rating of Landscape Potential If Score is: ☒ 4 - 6 = H ☐ 1 - 3 = M ☐ < 1 = L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?

H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? *Choose only the highest score that applies to the wetland being rated.*

Site meets ANY of the following criteria:

points = 2

☒ It has 3 or more priority habitats within 100 m (see next page)☐ It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)☐ It is mapped as a location for an individual WDFW priority species☐ It is a Wetland of High Conservation Value as determined by the Department of Natural Resources☐ It has been categorized as an important habitat site in a local or regional comprehensive plan, in a Shoreline Master Plan, or in a watershed plan

Site has 1 or 2 priority habitats (listed on next page) within 100m

points = 1

Site does not meet any of the criteria above

points = 0

WDFW Priority Habitats

Priority habitats listed by WDFW (see complete descriptions of WDFW priority habitats, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008. Priority Habitat and Species List. Olympia, Washington. 177 pp.

<http://wdfw.wa.gov/publications/00165/wdfw00165.pdf> or access the list from here:

<http://wdfw.wa.gov/conservation/phs/list/>

Count how many of the following priority habitats are within 330 ft (100 m) of the wetland unit: **NOTE:** *This question is independent of the land use between the wetland unit and the priority habitat.*

- ☐ **Aspen Stands:** Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- ☐ **Biodiversity Areas and Corridors:** Areas of habitat that are relatively important to various species of native fish and wildlife (*full descriptions in WDFW PHS report*).
- ☐ **Herbaceous Balds:** Variable size patches of grass and forbs on shallow soils over bedrock.
- ☒ **Old-growth/Mature forests:** Old-growth west of Cascade crest – Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in (81 cm) dbh or > 200 years of age. Mature forests – Stands with average diameters exceeding 21 in (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.
- ☐ **Oregon White Oak:** Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important (*full descriptions in WDFW PHS report p. 158 – see web link above*).
- ☒ **Riparian:** The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- ☐ **Westside Prairies:** Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (*full descriptions in WDFW PHS report p. 161 – see web link above*).
- ☒ **Instream:** The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources.
- ☐ **Nearshore:** Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore. (*full descriptions of habitats and the definition of relatively undisturbed are in WDFW report – see web link on previous page*).
- ☐ **Caves:** A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- ☐ **Cliffs:** Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- ☐ **Talus:** Homogenous areas of rock rubble ranging in average size 0.5 - 6.5 ft (0.15 - 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ☒ **Snags and Logs:** Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.

Note: All vegetated wetlands are by definition a priority habitat but are not included in this list because they

Wetland name or number, DC-08
are addressed elsewhere.

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
<i>Check off any criteria that apply to the wetland. List the category when the appropriate criteria are met.</i>	
SC 1.0. Estuarine Wetlands Does the wetland meet the following criteria for Estuarine wetlands? <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt <input type="checkbox"/> Yes - Go to SC 1.1 <input checked="" type="checkbox"/> No = Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No - Go to SC 1.2	
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has less than 10% cover of non-native plant species. (If non-native species are <i>Spartina</i> , see page 25) <input type="checkbox"/> At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV) SC 2.1. Has the WA Department of Natural Resources updated their website to include the list of Wetlands of High Conservation Value? <input type="checkbox"/> Yes - Go to SC 2.2 <input checked="" type="checkbox"/> No - Go to SC 2.3 SC 2.2. Is the wetland listed on the WDNR database as a Wetland of High Conservation Value? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV SC 2.3. Is the wetland in a Section/Township/Range that contains a Natural Heritage wetland? http://www1.dnr.wa.gov/nhp/refdesk/datasearch/wnhpwetlands.pdf <input type="checkbox"/> Yes - Contact WNHP/WDNR and to SC 2.4 <input checked="" type="checkbox"/> No = Not WHCV SC 2.4. Has WDNR identified the wetland within the S/T/R as a Wetland of High Conservation Value and listed it on their website? <input type="checkbox"/> Yes = Category I <input type="checkbox"/> No = Not WHCV	
SC 3.0. Bogs Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below. If you answer YES you will still need to rate the wetland based on its functions.</i> SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in or more of the first 32 in of the soil profile? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No - Go to SC 3.2 SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or pond? <input type="checkbox"/> Yes - Go to SC 3.3 <input checked="" type="checkbox"/> No = Is not a bog SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30% cover of plant species listed in Table 4? <input type="checkbox"/> Yes = Is a Category I bog <input type="checkbox"/> No - Go to SC 3.4 NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16 in deep. If the pH is less than 5.0 and the plant species in Table 4 are present, the wetland is a bog. SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?	

Wetland name or number DC-08 ☐ Yes = **Is a Category I bog** ☐ No = **Is not a bog**

SC 4.0. Forested Wetlands

Does the wetland have at least 1 contiguous acre of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as priority habitats? ***If you answer YES you will still need to rate the wetland based on its functions.***

- ☐ **Old-growth forests** (west of Cascade crest): Stands of at least two tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in (81 cm) or more.
- ☐ **Mature forests** (west of the Cascade Crest): Stands where the largest trees are 80-200 years old OR the species that make up the canopy have an average diameter (dbh) exceeding 21 in (53 cm).

☐ Yes = **Category I** ☒ No = **Not a forested wetland for this section**

SC 5.0. Wetlands in Coastal Lagoons

Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?

- ☐ The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks
- ☐ The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (*needs to be measured near the bottom*)

☐ Yes - Go to **SC 5.1** ☒ No = **Not a wetland in a coastal lagoon**

SC 5.1. Does the wetland meet all of the following three conditions?

- ☐ The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species on p. 100).
- ☐ At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-mowed grassland.
- ☐ The wetland is larger than 1/10 ac (4350 ft²)

☐ Yes = **Category I** ☐ No = **Category II**

SC 6.0. Interdunal Wetlands

Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? ***If you answer yes you will still need to rate the wetland based on its habitat functions.***

In practical terms that means the following geographic areas:

- ☐ Long Beach Peninsula: Lands west of SR 103
- ☐ Grayland-Westport: Lands west of SR 105
- ☐ Ocean Shores-Copalis: Lands west of SR 115 and SR 109

☐ Yes - Go to **SC 6.1** ☒ No = **Not an interdunal wetland for rating**

SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M for the three aspects of function)?

☐ Yes = **Category I** ☐ No - Go to **SC 6.2**

SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?

☐ Yes = **Category II** ☐ No - Go to **SC 6.3**

SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac?

☐ Yes = **Category III** ☐ No = **Category IV**

^a Scientific names are consistent with Corps 2018

^b Common names consistent with USDA Plants Database

OBL = Occur almost always under natural conditions in wetlands

FACW = Usually occur in wetlands but occasionally found in non-wetlands

FAC = Equally likely to occur in wetlands and nonwetlands

FACU = Usually occur in non-wetlands but occasionally found in wetlands

UPL = Occur in wetlands in another region, but occur almost always under natural conditions in non-wetlands in the region specified.

If the plant is not listed on the National Wetland Plant List (Corps 2018) and it does not occur on the list in and adjacent region the plant is assumed to be UPL.

Note, this is an updated version of the plant list reported by WSDOT (2013), which now includes species reported by WSDOT (2013) and species observed during the 2018-2019 assessment.

Executive Summary

The Federal Highway Administration and the Washington State Department of Transportation are proposing construction of a flyover ramp from westbound Interstate 90 (I-90) to westbound State Route (SR) 18 in King County, Washington, to address safety and improve mobility. The project will extend from I-90 milepost (MP) 25.54 to MP 26.54 and from SR 18 MP 26.90 to MP 27.90. The flyover ramp will include a bridge over Lake Creek. Stormwater facilities will be constructed to treat stormwater runoff from new impervious surface created by the project.

This report provides necessary information to help the project avoid or minimize potential impacts to wetlands, streams, and their buffers.

Twenty wetlands were delineated within the project limits. Additional wetlands adjacent to the project were reconnoitered; several to the southeast and one to the northwest. All of the wetlands are regulated by the U.S. Army Corps of Engineers as waters of the United States and by the Washington State Department of Ecology as waters of the state. Other jurisdictions in the project include the U.S. Forest Service, Washington Department of Natural Resources, and King County.

In general, the wetlands are depressional and/or slope, palustrine forested, scrub-shrub, and emergent wetlands dominated by native vegetation. Wetlands range from Category I to IV, providing a range of water quality, hydrologic, and wildlife habitat functions. A number of high quality wetlands are present in the project limits including two mature forested Category I wetlands, one Category I based on functions, and four Category II wetlands. Vegetated buffers around the wetlands perform various levels of buffering functions. Some buffer areas include mature forested and shrub communities, while other buffers are riparian areas or mowed strips of vegetation directly adjacent to the road in maintained right of way. A tall right of way fence bisects many of the wetlands, streams, and buffers.

Four streams are present within the project limits and one directly adjacent to it. Lake Creek drains Echo Lake, originating south of the eastern project limits. It drains to the Raging River, a tributary to the Snoqualmie River, approximately one linear mile west of the project. One unnamed creek entirely within the project limits parallels SR 18 westbound lanes and another unnamed creek lies just east of project limits, paralleling SR 18 eastbound lanes. These streams join Lake Creek on either side of the Lake Creek culvert under SR 18. Two additional unnamed creeks are present in the southeast quadrant of the interchange, between the I-90 eastbound on-ramp and SE 104th St. Both of these streams drain through a reconnoitered wetland east of the project before entering Lake Creek.

Federally listed species are known to occur in the Project. Puget Sound Chinook distinct population segment (DPS) and Puget Sound steelhead DPS have been documented in the study area (WDFW 2012a). Designated critical habitat and Washington State listed sensitive plant and animal species are not likely to occur in the Project. A separate Biological Assessment will be prepared to address federally listed species and designated and proposed critical habitat. The Washington Department of Fish and Wildlife Priority Habitats and Species data show wetlands adjacent to the project and winter elk range present in the southwestern portion of the project (WDFW 2012b).

1. Introduction

This report was prepared for Washington State Department of Transportation (WSDOT) Northwest Region to assess potential wetland and stream impacts within the proposed Interstate 90 (I-90)/State Route (SR) 18 Interchange – Westbound Flyover Ramp Project, hereinafter referred to as the project. WSDOT is proposing to improve safety and traffic flow at this interchange.

The purpose of the report is to identify and describe wetlands and streams in the project limits. This report helps WSDOT avoid or minimize impacts to wetlands and streams during the design process, document wetland and stream boundary determinations for review by regulatory authorities, and provide background information for the wetland mitigation report if unavoidable wetland impacts are imminent.

This report provides supporting documentation for permit applications if wetland impacts are unavoidable, in which case it would be reviewed at minimum by U.S. Army Corps of Engineers (USACE) and Washington State Department of Ecology (Ecology).

2. Proposed Project

2.1. Project Location

The I-90/SR 18 interchange is located about 300 feet south of the City of Snoqualmie with North Bend to the east and Issaquah to the west (Figure 1). The project is located in township 23 north, range 7 east, and sections 2, 3, 10 and 11. The project extends from I-90 milepost (MP) 25.54 to 26.54 and SR 18 MP 26.90 to 27.90 (Figure 2). The project is outside of the Urban Growth Area (UGA) in King County, Washington with portions of the project occurring on U.S. Forest Service (USFS) land in the Mount Baker-Snoqualmie National Forest, King County property, Washington Department of Natural Resources (WDNR) parcels, WSDOT right of way (ROW), and private property (Appendix A-1).

2.2. Project Purpose and Description

The Federal Highway Administration (FHWA) and WSDOT are proposing to construct a flyover ramp from westbound I-90 to westbound SR 18 to improve mobility and address safety concerns. The existing I-90/SR 18 interchange consists of a diamond-type interchange with at-grade intersections on SR 18. Demand at the ramp terminal intersections exceeds capacity during weekday peak commute periods, resulting in severe congestion. Traffic queues often extend onto mainline I-90, which causes an increased risk of high-speed rear-end collisions.

Work will also include grading, pavement markings, drainage improvements, permanent signing, illumination, intelligent transportation systems, and barriers. Stormwater facilities will be constructed to treat stormwater runoff from new impervious surface. The flyover ramp will span Lake Creek. Fill for the SR 18 on-ramp will require relocating a section of an unnamed tributary/Stream 2 (Figure 3; Appendix B, Plot 5) to Lake Creek.

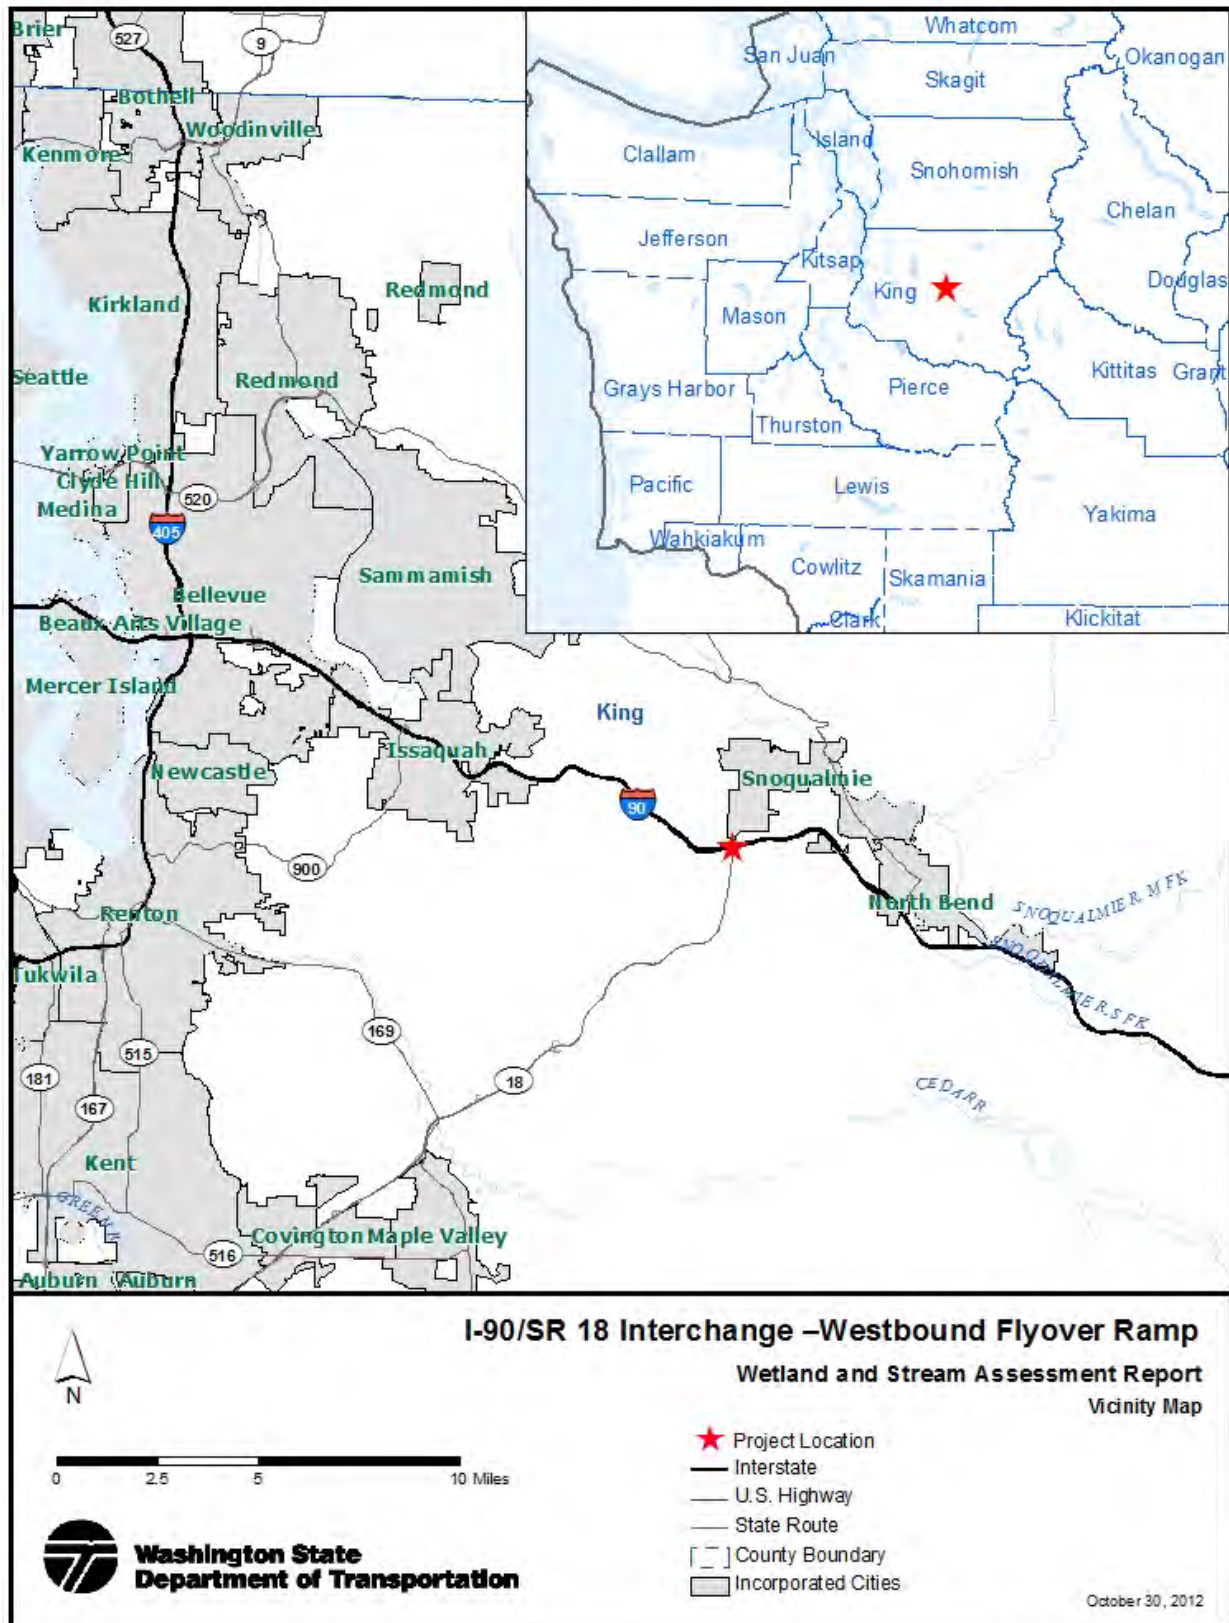

Figure 1. Project vicinity.

2.3. Study Area

The area examined for wetlands and streams is referred to as the study area and it includes all potential impact areas within the project limits (Figure 2). The study area includes:

- areas west of SR 18 between MP 26.90 and MP 27.90; referred to as the southwest quadrant of the interchange
- areas east of SR 18, south of the eastbound I-90 on-ramp, and north and west of SE 104th St.; referred to as the southeast quadrant
- areas north of westbound I-90 lanes between MP 25.54 and MP 26.54; referred to as the northeast quadrant
- The areas within the four quadrants of the current diamond type on and off-ramps

Several wetlands outside of the study area, east of SR 18, and one wetland west of the WSDOT maintenance yard were reconnoitered and were not delineated (Figure 3; Appendix B). The reconnoitered wetlands were not delineated because project designs do not include work in those areas. Other wetlands and streams are present in the project vicinity. Should design plans change, all new areas beyond the study area boundary identified in Figure 2 would need to be assessed for wetlands and streams.

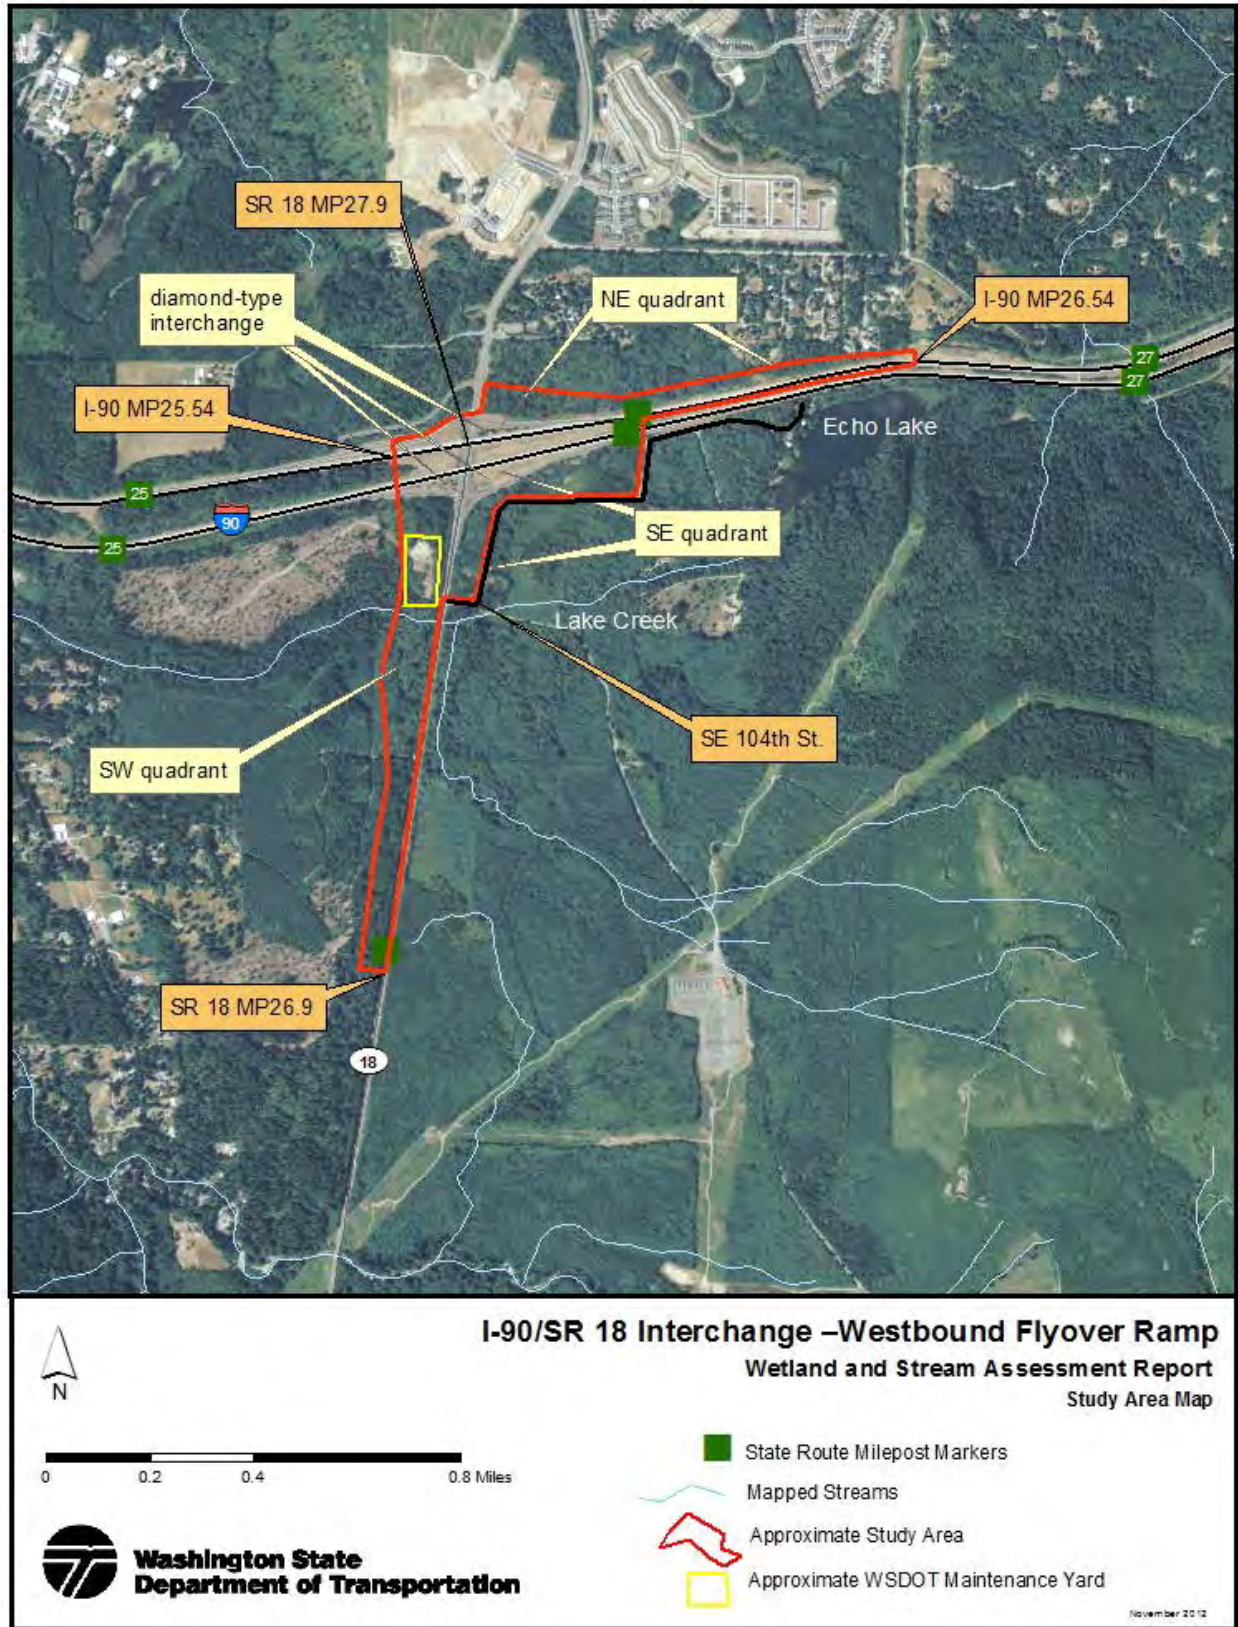

Figure 2. Project study area.

3. Methods

3.1. Wetland Identification, Delineation, Classification, Functions, and Buffers

The following data sources were reviewed for information on regulatory buffer requirements, vegetation patterns, precipitation, topography, drainage, soils, and potential or known wetlands in the project vicinity, and can be found in Appendix A:

- King County parcel, zoning, and land use data (King County 2011) (Appendix A-1) ,
- Natural Resources Conservation Service (NRCS) National Water and Climate Center, WETS station data (NRCS 2002) (Appendix A-2)
- National Oceanic and Atmospheric Administration (NOAA) National Climatic Data Center, COOP station data (NOAA 2012) and Weather Underground weather station data (Weather Underground 2012) (Appendix A-2; A-3)
- U.S. Geological Survey (USGS) 7.5 minute topographic maps (USGS 2012) (Appendix A-4)
- NRCS, Washington State Hydric Soil list (NRCS 2012a) and Forest Land Soils (WDNR 2000) (Appendix A-5)
- National Wetland Inventory (NWI) maps (USFWS 1996) (Appendix A-6)

Wetland and stream assessment fieldwork was originally conducted August 2005 through November 2006. The project was then put on hold. In October 2011 and September through November 2012 WSDOT biologists verified original 2005/2006 wetland boundaries within a revised potential impact area (Figure 2) using a Trimble GeoXT GPS unit with 2005/2006 wetland and stream survey data. Wetland boundaries were verified and amended when needed. Wetland and upland sample point data were recollected for each wetland using routine methods described in the:

- Corps of Engineers Wetlands Delineation Manual (Environmental Laboratory 1987)
- Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Western Mountains, Valleys, and Coast Region (Version 2.0) (USACE 2010)

Additional wetlands were also identified during 2012 field work.

For the 2005/2006 and 2011/2012 field work, wetlands and other habitats were assessed while walking the extent of the study area. Wetland determinations were made using observable vegetation, hydrology, and soil indicators. Upland areas adjacent to each potential wetland area were also evaluated. Based on the field data, a wetland/non-wetland determination was made for each examined area. The boundaries of jurisdictional wetlands occurring within the study area were marked with sequentially numbered pink flags and then instrument- surveyed. Wetland flags were placed at regular intervals and at any change in direction along the boundary. Constructed drainage features were also assessed to determine if they would be regulated as wetlands.

Wetlands were classified using the US Fish and Wildlife Service (USFWS) classification system (Cowardin, Carter, Golet and others 1979) and the Hydrogeomorphic Classification system (HGM) (Brinson 1993). Wetlands were rated using the Washington State Wetland Rating System for Western Washington - Revised (Hruby

2006), which is the rating system outlined in the King County Code (King County 2012). Wetland functions were assessed using the Wetland Functions Characterization Tool for Linear Projects (Null et al. 2000).

King County wetland buffers for areas outside the UGA were applied to wetlands. Buffer widths range from 25 to 300 feet depending on wetland rating and intensity of impact. High intensity impact buffers were applied to wetlands in the project (King County 2012). The USFS buffer requirements, of either 100 or 150 feet, based on wetland size, (USDA, USFS, USDI, BLM 1994) are provided for wetlands occurring within or partially within USFS property; Wetland (W)4 (Table 1; Table 5) and W8 (Table 1; Table 9). Plan sheets only show King County buffer requirements for each wetland (Appendix B). King County buffer requirements were applied to wetlands on WDNR property (W1, W2, and W3).

Wetland buffers conditions within the study area were assessed using the following criteria: dominant land use (e.g., agriculture, residential, commercial, industrial), dominant buffer vegetation type (tree, shrub, herb, un-vegetated), and estimated percent cover of invasive plants.

3.2. Stream Identification, Delineation, Classification, and Buffers

Ordinary high water marks (OHWM) of streams in the study area were delineated in 2005/2006. The boundaries were verified during 2012 field work and the OHWM for Stream 4 was re-flagged and instrument-surveyed in December 2012. Streams were classified according to local, state, and USFS regulations and buffers assigned according to King County code (King County 2012). King County water types include:

- Type S waters are designated shorelines of the state
- Type F waters contain fish or fish habitat
- Type N non-fish bearing streams, with an surface connection to type S or F streams
- Type O waters do not meet above criteria and lack surface connections to other waters

King County stream buffers for areas outside the UGA range from 25 to 165 feet depending on water type (King County 2012). Streams 1, 2, and Lake Creek/3 have portions that occur or may occur on USFS property, which require stream buffer widths from 100 to 300 feet, depending on fish presence and seasonal or permanent flows (USDA, USFS, USDI, BLM 1994). Buffers on plan sheets only show King County buffer requirements (Appendix B), however, USFS buffers are listed (Table 23 through Table 26). Streams in the project do not occur on WDNR land.

Biologists evaluated in-stream habitat and riparian habitat in order to classify streams. Habitat evaluation included a qualitative analysis of average channel width, substrate, pool/riffle characteristics, stream gradient, fish access, large woody debris (LWD), and condition and vegetation within the stream buffer.

Fish presence or absence was investigated by accessing several data sources with GIS ArcMap 10:

- WDNR water type maps (WDNR 2012)
- Washington State Department of Fish and Wildlife (WDFW) fish distribution maps (WDFW 2012a)

3.3. Wetland and Stream Reconnaissance

The 2005/2006 study area was based on a larger potential impact area than the 2011/2012 (current) proposed design and included areas west and east of current potential impact areas. The current design minimized the project footprint and therefore, potential sensitive area impacts. Wetlands occurring adjacent to or very near the project are identified in this report and on plans as reconnoitered wetlands (Figure 3; Appendix B). Their presence was confirmed from the shoulder of SR 18 and from the WSDOT maintenance yard and by using aerial photographs and background information (Appendix A-4 through A-6). Their boundaries were not verified or redelineated and data was not recollected in 2011/2012.

3.4. Species and Habitats of Interest

Information in this report documenting threatened, endangered, and sensitive (TES) fish, wildlife, plants, and critical habit is based on review of available data at the time the report was prepared. Field investigations of sensitive species were not conducted. A separate Biological Assessment will be prepared to document potential impacts to federally listed species and designated critical habitat.

The following data sources were reviewed for information on TES fish, wildlife, and plant species:

- USFWS Species Report. Listing and Occurrences for Washington (USFWS 2012)
- National Marine Fisheries Service(NMFS) Northwest Regional Office website ESA salmon listings (NMFS 2012)
- WDFW Fish Distribution (WDFW 2012a)
- WDFW Priority Habitats and Species Program (WDFW 2012b)
- WDFW Wildlife Occurrence Points (WDFW 2012c)
- WDFW Washington State Species of Concern (WDFW 2012d)
- Washington State Natural Heritage Program (WHNP) Plant Heritage (WHNP 2012)
- Natural Resource Information System (NRIS) Survey and Manage Species Plants (NRIS 2012)

4. Existing Conditions

4.1. Landscape Setting

The project is situated at the southern extent of the North Cascades Province (Franklin and Dyrness 1988) in foothills on the western slopes of the Cascade Mountains. This region has been shaped by a complex geologic history including inundation by the sea, geologic uplift, glacial activity, development of volcanoes, erosion of soils, and deposition of glacial till in valley bottoms. These geologic processes directly shape the present day landscape which is characterized by coniferous forests dominated by Douglas-fir (*Pseudotsuga menziesii*), western hemlock (*Tsuga heterophylla*), western red cedar (*Thuja plicata*), and bigleaf maple (*Acer macrophyllum*), with many steep sided mountains and foot hills with river valleys below. Soils in the region are generally comprised of forest soils establishing on top of glaciated material. Soil textures can contain very course material to finer textured silts and clays.

The project is approximately fifteen miles east and inland of Lake Washington and twenty miles west of Snoqualmie Pass. The City of Snoqualmie is less than 300 feet north from the northern extent of the project. Land use around the project is mostly rural and undeveloped, apart from the presence of the two highways and the City of Snoqualmie to the north. Parcels surrounding the project are owned primarily by USFS, King County, and the Washington State Department of Natural Resources, with some private property north of I-90 and west of Echo Lake.

The project is in the Upper Snoqualmie River watershed (watershed 1711001004) (BLM 2012) at the upper extent of Water Resource Inventory Area (WRIA) 7 Snohomish (Ecology 2000). Topography in the area varies from valley bottoms to steep hill slopes. The peaks surrounding the project are between 2000 and 2700 feet above sea level with the project between 850 and 900 feet elevation (Appendix A-4). Rattlesnake Mountain, with a peak of 2250 feet, lies southeast of the project. This landscape feature generally creates runoff and drainage heading west, contributing hydrologic inputs to the southern quadrants of the project, south of I-90. Echo Lake at the northern toe of slope of Rattlesnake Mountain drains to Lake Creek which flows west through the southern quadrants of the project. In general, surface water moves from the north and eastern project areas flowing west, draining to the Raging River via Lake Creek. The Raging River is a tributary of the Snoqualmie River. The confluence of the two rivers is approximately four and a half linear miles downstream of the project.

4.2. Climate, Precipitation, and Growing Season

The study area is situated approximately twenty three miles inland from Puget Sound and about five miles southwest of where the three forks of the Snoqualmie River converge. The project lies in the foothills of the Cascade Mountains. A cool marine climate produced by the Puget Sound results in cool, dry summers and wet, mild winters. The area receives an average total snow fall of about seven inches per year and an overall total of fifty seven inches of precipitation per year with most of the precipitation occurring between September and June (NRCS 2002).

The Regional Delineation Supplement Version 2.0 (USACE 2010) recommends using methods described in Chapter 19 in *Engineering Field Handbook* (NRCS1997) to determine if precipitation occurring in the three full months prior to a site visit was normal, drier than normal, or wetter than normal. Actual rainfall is compared to the normal range of the 30-year average (Appendix A-2; A-3).

- Normal precipitation conditions were present prior to field work occurring in late October 2011, mid September, late October, and mid November 2012
- Drier than normal conditions were present prior to field visits occurring in late September and early October 2012

The majority of the 2011/2012 wetland and stream field work was conducted at the end of the growing season. Most woody and herbaceous vegetation was still identifiable to species. Ideally, hydrology is assessed during the growing season and during periods with normal precipitation conditions. Much of the wetland field work was conducted during drier than normal conditions in late September and early October 2012. When field work must be performed during periods considered drier than normal, biologists use best professional judgment based on background information and on-site observations to make inferences about hydrology. It is assumed that wetland hydrology is present during the growing season in years with normal precipitation when hydrophytic vegetation, hydric soils, and landscape positions typical of wetlands were observed.

4.3. Wetlands

4.3.1. Overview

Twenty wetlands were delineated within the study area (Figure 3; Tables 2 through 21; Appendix B; Appendix C). Several wetlands occurring east of the study area along SR 18 and one west of the study area were reconnoitered (Figure 3; Appendix B).

- All twenty of the identified wetlands were delineated in entirety.
- Several wetlands originally identified during the 2005/2006 field work adjacent to the study area east of SR 18 and one wetland west of the WSDOT maintenance yard (Figure 2) were reconnoitered. The presence of these wetlands was confirmed but no further assessment was completed during 2011/2012 field work because these wetlands and their buffers are not within the current project limits (Figure 2).

Other wetlands, streams, and their buffers are present outside of and near the project limits. Additional areas would need to be delineated should project designs change, expanding the current proposed potential impact area identified in Figure 2.

Wetlands in the project have various HGM classes, Cowardin classes, wetland ratings, and buffer widths (Table 1). Wetlands are typically slope or depressional. Five wetlands had multiple HGM classes present combining slope, depressional, and riverine areas. Wetlands were palustrine emergent (PEM), palustrine scrub-shrub (PSS), or palustrine forested (PFO), or a combination of two of these Cowardin classes. King County uses the Washington Wetland Rating System to assess wetlands and does not require additional county-specific assessments. All four wetland categories are present within the project. High quality Category I and II wetlands are present in the southwest quadrant of the project, including two mature forested Category I wetlands (W1 and W4) and one Category I based on functions (W3). Wetlands in the southwest quadrant are all Category III, with the exception of one Category II (W12). The northeast quadrant has a mix of Category II, Category III, and Category IV wetlands.

Wetlands in the project are headwater wetlands providing important hydrologic and water quality functions in the watershed. Some of the wetlands also provide moderate to high quality wildlife habitat (Table 22; Appendix E).

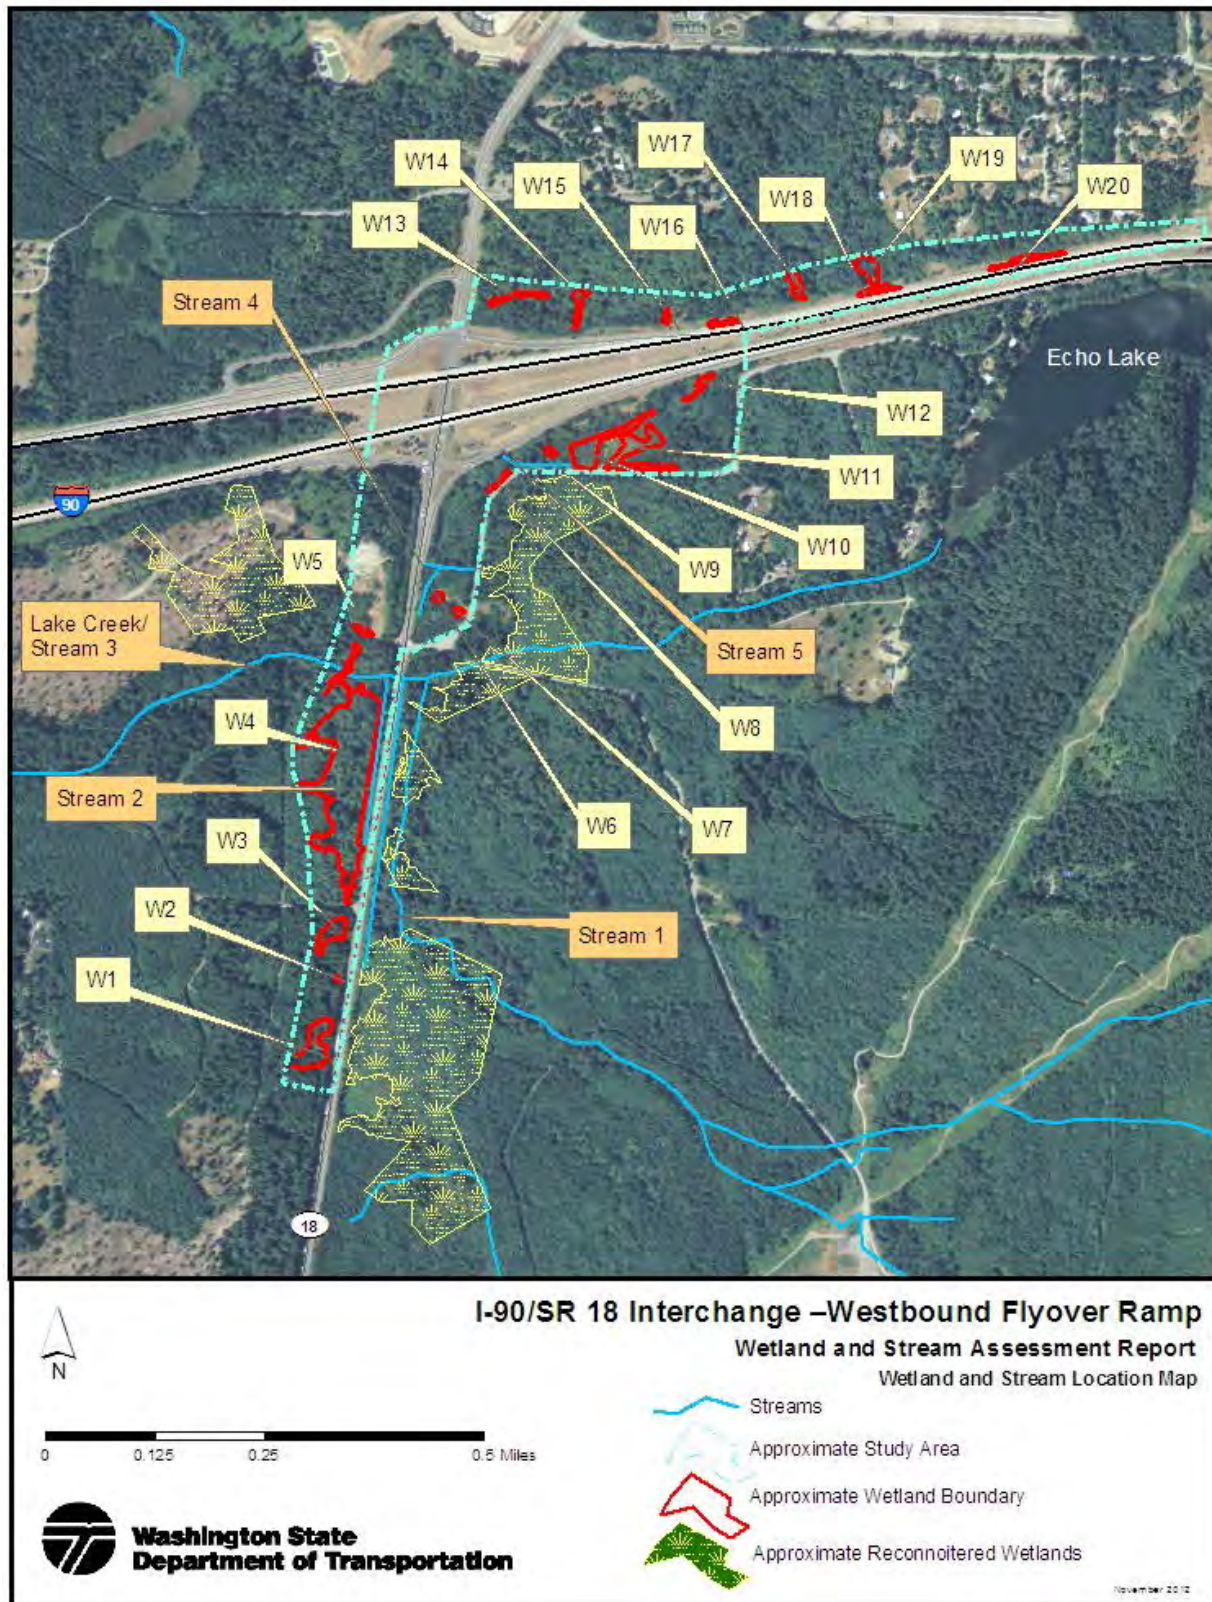

Figure 3. I-90/SR 18 Interchange-Westbound Flyover Ramp approximate wetland boundaries, streams, and study area.

Table 1. Wetlands within the project.

Wetland ^a	Wetland Classification			Wetland Size (sq. ft.)	Wetland Size (acres)	King Co. ^e / USFS ^f Buffer Width (feet)
	Cowardin ^b	HGM	Ecology ^c & Local Jurisdiction ^d			
1	PFO	depressional	I	34,374	0.79	240
2	PEM	depressional	II	660	0.02	210
3	PFO	depressional	I	17,124	0.39	210
4	PFO	riverine/depressional	I	281,160	6.45	300/150
5	PSS/PEM	slope	III	4,549	0.10	80
6	PSS	slope	III	2,310	0.05	80
7	PEM	depressional	III	507	0.01	80
8	PFO	depressional	III	3,191	0.07	80/100
9	PSS	slope	III	1,111	0.03	80
10	PFO	slope/depressional	III	38,297	0.90	80
11	PFO	slope/depressional	III	15,267	0.35	80
12	PFO	slope/depressional	II	4,697	0.11	100
13	PFO	depressional	II	6,962	0.16	195
14	PFO/PSS	slope/depressional	II	10,030	0.23	195
15	PSS	slope	III	1,634	0.04	80
16	PSS/PEM	slope	III	2,772	0.07	80
17	PFO/PSS	slope	III	4,748	0.11	80
18	PEM	slope	IV	6,277	0.14	50
19	PSS	slope	IV	2,114	0.05	50
20	PEM	slope	III	9,596	0.22	80

^a Wetland identifier

^b NWI Class based on vegetation: PFO = palustrine forested, PSS = palustrine scrub-shrub, PEM = palustrine emergent; (Cowardin, Carter, Golet and others 1979)

^c Ecology rating (Hruby 2006)

^d King County wetland rating (King County 2012)

^e King County wetland buffer widths for areas outside the UGA and based on high intensity impacts (King County 2012). King County buffers are provided for each wetland.

^f USFS buffers only provided for wetlands occurring on or partially on USFS lands (USDA, USFS, USDI, BLM 1994)

4.3.2. Wetlands

Vegetation

Native and non-native plants are present in the wetlands and their buffers (Appendix A-7). The PFO portions of the wetlands were dominated by mature stands of black cottonwood (*Populus balsamifera*), red alder (*Alnus rubra*), and western red cedar (*Thuja plicata*) with western hemlock (*Tsuga heterophylla*) established on hummocks, small topographic high-spots, or on nurse logs. An occasional Sitka spruce (*Picea sitchensis*) was established in forested wetland areas. The PFO wetlands typically had understories with shrub cover dominated by salmonberry (*Rubus spectabilis*) and a mix of native and non-invasive, non-native herbaceous plants. Wetland 1 and W4 are mature forested wetlands where the largest trees are black cottonwoods with diameter-at-breast-heights (DBH) between 40 and 60 inches.

The PSS portions of the wetlands were mainly dominated by salmonberry or hardhack (*Spiraea douglasii*) with a few and red alder and black cottonwood saplings intermixed. Some PSS areas had herbaceous communities established in the understory.

The PEM communities varied depending on the wetland. Some PEM communities were dominated by a combination of common ladyfern (*Athyrium filix-femina*) and youth on age (*Tolmiea menziesii*) with trailing blackberry (*Rubus ursinus*) creeping in from the edge and western swordfern (*Polystichum munitum*) established on hummocks. Other PEM plant associations were soft rush (*Juncus effusus*), spike bentgrass (*Agrostis exarata*), and colonial bentgrass (*Agrostis capillaris*) with scattered individuals of small-fruited bulrush (*Scirpus microcarpus*) and eggbract sedge (*Carex ovalis*). These species were also the typical herbaceous understory established below PFO and PSS wetland communities.

Invasive weedy species cover in the wetlands was low and generally provided less than five to ten percent cover. Himalayan blackberry (*Rubus armeniacus*) and cutleaf blackberry (*Rubus laciniatus*) were the common invasive species established in the wetlands with an occasional patch of reed canarygrass (*Phalaris arundinacea*). These species were mostly observed in disturbed areas of the wetlands including wetland areas directly adjacent to the roadway prism and roadside ditches.

Figure 4. Photo of a typical undisturbed PFO wetland on left and previously disturbed PSS wetland on right

Soils

Soils in the study area are mapped by WDNR (WDNR 2000) and show Tokul gravelly loam is the only soil series mapped in the project (Appendix A-5). The majority of the project is mapped with six to fifteen percent slopes. Slopes are fifteen to thirty percent in a small section of the project on the southern extent of the project limits along SR 18 (Appendix A-5). The Tokul soil series is not listed as hydric soil in King County, Washington on the National List of Hydric Soils (NRCS 2012a).

Tokul soils formed in glacial till, loess, and volcanic ash in till plains and glacially modified hills and mountains. These soils can be moderately well drained to poorly drained (NRCS 2012b).

- Wetlands in the southwest quadrant of the project, with the exception of W5, have relatively undisturbed soils (W1 through W4), in terms of human disturbances. Mineral soils with moderate to high organic matter content are common in these wetlands. Some areas had small pockets of organic soils. Soils in W5 have been disturbed by WSDOT maintenance yard activities.
- Wetlands in the southeast quadrant (W6 through W12) have soils impacted by past land use activities resulting in compaction, fill, addition of non-native soil material, and mixing of native soil layers. These soils have a high mineral content with little organic matter. The compacted, shallow, mineral soils perch precipitation and run-on long enough during the growing season for hydrophytic vegetation to establish.
- Wetlands in the northeast quadrant and one in the southeast quadrant have two different soil types: relatively undisturbed native soils and soils with some human disturbance. The relatively undisturbed native soils are mineral soils with moderate organic matter content (W12 through W14, W17, and W19). Disturbed soils have been impacted by the construction and maintenance of the I-90 ROW. These mineral soils generally have a low organic matter content and some soil compaction and mixing of native soil layers (W15, W16, W18, and W20)

Typical wetland soil profiles near wetland boundaries have depleted matrices or matrix values of 3 or less and chromas of 2 or less with redoximorphic concentrations. A few wetlands had loamy mucky mineral soils with high organic matter content. Soils on the interior of some wetlands with permanent saturation or inundation meet the definition of a hydric soil due to saturation, ponding, or flooding for long periods during the growing season.

Hydrology

In the Upper Snoqualmie River watershed, precipitation falls mostly as rain and mixed rain and snow in winter. Precipitation and snow melt infiltrate the soil and influences the water table. Three different hydrologic regimens generally influence wetland hydrology in the project. Some wetlands have hydrology mainly driven by a high groundwater table (W1 through W5, W8, W9, W13, W14, W17, and W19). A portion of Wetland 4 receives overbank flooding from Lake Creek. The hyporheic flow of Lake Creek also influences the high ground water table in some areas of W4. Other wetlands are mainly driven by surface and/or subsurface hillside seeps (W12, W16, W18, and W20). Wetlands that have formed on slopes with compacted soils have perched water tables on shallow soils mainly driven by precipitation and run-on (W6, W7, W10, W11, and W15).

Wetlands in the southwest quadrant of the project (W1 through W4) occur at toe of slope of the SR 18 westbound lanes. The eastern portions of these wetlands likely receive some stormwater runoff from the roadway structure, providing secondary hydrologic inputs. Small portions of some wetlands along the westbound I-90 lanes (W16, W18, and W20) and SE 104th St. (W8, W10, and W11) also receive stormwater inputs.

Surface water in the project generally runs from north and east, to southwest, ultimately draining to Lake Creek. Snoqualmie/SE 96th St. and the slopes to the south of the road create a hydrologic contributing basin for the northeast quadrant of the project. Surface water in this quadrant of the project generally drains south through the wetlands in this area and then leaves this quadrant through transportation infrastructure, including ditches, culverts, and a stormwater pond. Significant amounts of water leaving both the ditches and the stormwater pond flow into Stream 4, providing the predominant source of hydrology at the headwater of this stream. Stream 4 flows through reconnoitered wetlands east of the project before entering Lake Creek.

Surface water leaving the southeast quadrant drains through roadside ditches along SE 104th St. before entering Stream 4, then moving through the landscape as described above.

Lake Creek drains through a reconnoitered wetland east of the project, crosses SR 18 heading west, and flows through Wetland 4 before entering the Raging River approximately one linear mile west of the southwestern quadrant of the project. All streams in the project drain to Lake Creek.

Table 2. Wetland 1 summary.

WETLAND 1 – INFORMATION SUMMARY			
Location:	SW quadrant of I-90/SR 18 intersection, west of westbound SR 18		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	I	
	King Co. Buffer Width	240 feet	
	Wetland Size	0.79 acre	
	Cowardin Classification	PFO	
	HGM Classification	depressional	
	Wetland Data Sheets	Appendix C; Sampling Point W1-SP1	
	Upland Data Sheets	Appendix C; Sampling Point W1-SP2	
Dominant Vegetation	Trees – western red cedar (<i>Thuja plicata</i>), Shrubs – salmonberry (<i>Rubus spectabilis</i>), red huckleberry (<i>Vaccinium parvifolium</i>), Herbaceous – American skunkcabbage (<i>Lysichiton americanus</i>), water parsley (<i>Oenanthe sarmentosa</i>), with western swordfern (<i>Polystichum munitum</i>) on hummocks, Non-vascular - sphagnum moss (<i>Sphagnum</i> sp.)		
Soils	Soil matrices of 10YR 2/1 with redoximorphic concentrations, hereinafter referred to as concentrations, to greater than 18 inches. Indicator Redox Dark Surface (F6). Some locations had soils with high organic content. Indicator F1: Loamy Mucky Mineral.		
Hydrology	Wetland situated in a forested depression below and to the west of SR 18 with a high water table as the dominant hydrology source. Precipitation and stormwater runoff from SR 18 contribute secondary hydrologic inputs.		
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Topographic break near toe of slope of the depression and obvious change in vegetation community helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 1 is Category I based on both functions and special characteristics for mature forested wetlands. Organic soils and sphagnum moss present in some areas, however, does not meet special characteristics criteria for bogs in the Washington State Wetland Rating System due to the vegetation community not having the characteristic bog species (Hruby 2006).		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to large size and ability to retain significant amounts of water; moderate opportunity because wetland receives overland flow of surface water during and following storms. High potential to trap nutrients and toxicants due to due to densely vegetated topographic depression with high organic content in soils; moderate opportunity because portions of the wetland receive stormwater runoff from SR 18.		
Hydrologic	High potential to alter flood flow due to landscape position high in watershed and depressional topography able to retain high volumes of water; opportunity is high from run-on during precipitation and snow melt events. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	High habitat quality due to connection with large mature forested upland corridor, other wetlands and Raging River. Mature forested wetland with canopy stratification, decadence, various water regimens, and other characteristics able to support various wildlife. Wetland has uniqueness and heritage: Category I Mature Forested and WDFW priority habitats and species (PHS) present.		
Buffer Condition	Buffer function is high. Greater than half of the wetland circumference to the west consists of mature coniferous forest dominated by western red cedar and western hemlock (<i>Tsuga heterophylla</i>), intermixed with some historically logged areas where trees and shrubs have reestablished. The eastern wetland boundary is buffered by a thin strip of mature coniferous trees separating the wetland from the westbound lanes of SR 18. These forested areas provide wildlife habitat, shade, organic matter inputs, and some water quality and hydrologic buffering from stormwater runoff.		

Table 3. Wetland 2 summary.

WETLAND 2 – INFORMATION SUMMARY		
Location:	SW quadrant of I-90/SR 18 intersection, west of westbound SR 18	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	II
	King Co. Buffer Width	210 feet
	Wetland Size	0.02 acre
	Cowardin Classification	PEM
	HGM Classification	depressional
	Wetland Data Sheets	Appendix C; Sampling Point W2-SP1
	Upland Data Sheets	Appendix C; Sampling Point W2-SP2
Dominant Vegetation	Trees – red alder (<i>Alnus rubra</i>) Shrubs – salmonberry Herbaceous – slough sedge (<i>Carex obnupta</i>), common ladyfern (<i>Athyrium filix-femina</i>)	
Soils	Soil matrices were depleted with 2.5Y 6/1 with concentrations to greater than 16 inches. Indicator Depleted Matrix (F3).	
Hydrology	Wetland situated in a depression below and to the west of SR 18 with a high water table as the dominant hydrology source. Precipitation and stormwater runoff from SR 18 contribute secondary hydrologic inputs. Water leaves the wetland through a constricted outlet at a culvert flowing east under SR 18, emptying in to the headwaters of Steam 1.	
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Topographic break near toe of slope of the depression and obvious change in vegetation community helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 2 is Category II.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to depressional topography with dense herbaceous vegetation and a constricted outlet (a culvert), allowing for significant ponding and fine sediments to settle out of the water column; moderate opportunity because wetland receives overland flow of surface water during and following storms. Moderate potential to trap nutrients and toxicants due to the same physical characteristics described for sediment trapping function, though overall size of wetland is small reducing its ability to perform this function; moderate opportunity because wetland receives stormwater runoff from SR 18.	
Hydrologic	Low potential to alter flood flow due to small size; opportunity is moderate as significant amounts of water drain through the wetland from upslope areas during and following precipitation. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality. Wetland is connected to a large upland forested corridor that connects to other wetlands and Raging River. Function limited by wetland size. Wetland provides habitat for aquatic invertebrates, breeding, juvenile, and adult amphibians, passerine birds, small mammals, and deer.	
Buffer Condition	Buffer function is high. Approximately half of the wetland circumference to the west consists of mature forest dominated by western red cedar and red alder, intermixed with some historically logged areas where trees and shrubs have reestablished. The eastern half of the wetland boundary is buffered by a thin strip of mature coniferous trees separating the wetland from the westbound lanes of SR 18. These forested areas provide wildlife habitat, shade, organic matter inputs, and some water quality and hydrologic buffering from stormwater runoff.	

Table 4. Wetland 3 summary.

WETLAND 3 – INFORMATION SUMMARY			
Location:	SW quadrant of I-90/SR 18 intersection, west of westbound SR 18		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	I	
	King Co. Buffer Width	210 feet	
	Wetland Size	0.39 acre	
	Cowardin Classification	PFO	
	HGM Classification	depressional	
	Wetland Data Sheets	Appendix C; Sampling Point W3-SP1	
	Upland Data Sheets	Appendix C; Sampling Point W3-SP2	
Dominant Vegetation	Trees – western red cedar, Shrubs – Devil's club (<i>Oplopanax horridus</i>), salmonberry, western red cedar saplings, Herbaceous – common ladyfern, western swordfern on hummocks, Pacific trillium (<i>Trillium ovatum</i>), Non-vascular - sphagnum moss present		
Soils	Soil matrices were 10YR 3/1 with concentrations to greater than 16 inches. Indicator Redox Dark Surface (F6). High organic matter present in some areas.		
Hydrology	Wetland situated in a forested closed depression below and west of SR 18 with a high water table as the dominant hydrology source. Precipitation and stormwater runoff from SR 18 contribute secondary hydrologic inputs. The wetland has no outlet indicating water leaves through infiltration and evapotranspiration.		
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Topographic break near toe of slope of the depression and obvious change in vegetation community helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 3 is Category I. Soils with high organic content and sphagnum moss present in some areas of the wetland, however, does not meet the bog criteria for special characteristics in the Washington State Wetland Rating System due to the vegetation community not having the characteristic bog species (Hruby 2006)		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to closed depressional topography, dense vegetation, and seasonal ponding which allow fine sediments to settle out of the water column; moderate opportunity because wetland receives overland flow of surface water during and following storms. High potential to trap nutrients and toxicants due to due to densely vegetated topographic closed depression with high organic content in soils; moderate opportunity because portions of the wetland receive stormwater runoff from SR 18.		
Hydrologic	High potential to alter flood flow due to landscape position high in watershed and depressional topography able to retain high volumes of water; opportunity is high from run-on during precipitation events. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	High habitat quality due to connection with large mature forested upland corridor, other wetlands and Raging River. Forested wetland with canopy stratification, decadence, various water regimens, and other characteristics able to support various wildlife. Wetland has uniqueness and heritage: Category I forested and PHS present.		
Buffer Condition	Buffer function is high. Greater than half of the western wetland circumference consists of mature coniferous forest dominated by western red cedar and western hemlock, intermixed with some historically logged areas where trees and shrubs have reestablished. The eastern wetland boundary is buffered by a thin strip of mature coniferous trees separating the wetland from the westbound lanes of SR 18. These forested areas provide wildlife habitat, shade, organic matter inputs, and some water quality and hydrologic buffering form stormwater runoff.

	Wetland Data Sheets	Appendix C; Sampling Point W4-SP1, W4-SP3	
Upland Data Sheets	Appendix C; Sampling Point W4-SP2, W4-SP4		
Dominant Vegetation	Trees – red alder, black cottonwood (<i>Populus balsamifera</i>), Cascara buckthorn (<i>Frangula purshiana</i>), vine maple (<i>Acer circinatum</i>), Shrubs – salmonberry, Pacific ninebark (<i>Physocarpus capitatus</i>), Herbaceous – youth on age (<i>Tolmiea menziesii</i>), sedges (<i>Carex</i> spp.), common ladyfern.		
Soils	Soil matrices were 10YR 2/1 and 10YR 3/2 to five inches. A second layer from five to 16 inches with a depleted matrix of 10YR 5/2 with concentrations and depletions is present. Indicators Depleted Below Dark Surface (A11) and Depleted Matrix (F3).		
Hydrology	Wetland situated in a forested depression with Lake Creek running through it. It is below and to the west of SR 18. A high water table is the dominant hydrology source. Precipitation, hyporheic flow and occasional overbank flooding from Lake Creek, and stormwater runoff from SR 18 contribute secondary hydrologic inputs to portions of the wetland. Parts of the wetland have no outlet, while other areas outlet to Lake Creek.		
Rationale for Delineation	Depressional and riverine wetland with hydric soils, supporting hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and hydric soils helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 4 is Category I. It is Category I based on special characteristics for mature forested wetland and Category II based on functions.		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to large size and ability to retain significant amounts of water; moderate opportunity because wetland receives runoff from multiple sources including Lake Creek during and following storms. High potential to trap nutrients and toxicants due to densely vegetated topographic depression with some organic content in soils; moderate opportunity because portions of the wetland receive stormwater runoff from SR 18.		
Hydrologic	High potential to alter flood flow due to landscape position high in watershed and depressional and undulating topography able to retain water; opportunity is high due to flood overflow from Lake Creek and stormwater inputs. Moderate erosion control and shoreline stabilization functions provided because Lake Creek flows through the wetland.		
Habitat	High habitat quality due to connection with large mature forested upland corridor, other wetlands and Raging River. Mature forested wetland with canopy stratification, decadence, various water regimens, and other characteristics able to support various wildlife including fish, wetland mammals, amphibians, large and small land mammals, and passerine birds. Wetland has uniqueness and heritage: Category I Mature Forested and WDFW priority habitats and species (PHS) present.		
Buffer Condition	Buffer function is high. Greater than half of the western wetland circumference has mature coniferous forest dominated by western red cedar, western hemlock, Douglas-fir (<i>Pseudotsuga menziesii</i>), and vine maple intermixed with some historically logged areas where trees and shrubs have reestablished. The eastern wetland boundary is buffered by a thin strip of mature coniferous trees separating the wetland from the westbound lanes of SR 18 and the southern portion of the WSDOT maintenance yard. These forested areas provide wildlife habitat, shade, organic matter inputs, and some water quality and hydrologic buffering from stormwater runoff.		

Table 6. Wetland 5 summary.

WETLAND 5 – INFORMATION SUMMARY			
Location:	SW quadrant of I-90/SR 18 intersection, south end of WSDOT maintenance yard		
	Local Jurisdiction		King County
	WRIA		7 Snohomish
	Ecology & Local Rating		III
	King Co. Buffer Width		80 feet
	Wetland Size		0.10 acre
	Cowardin Classification		PSS/PEM
	HGM Classification		slope
	Wetland Data Sheets		Appendix C; Sampling Point W5-SP1, W5-SP3
	Upland Data Sheets		Appendix C; Sampling Point W5-SP2
Dominant Vegetation	Trees – none. Shrubs – hardhack (<i>Spiraea douglasii</i>), black cottonwood, willows (<i>Salix spp.</i>), cutleaf blackberry (<i>Rubus laciniatus</i>). Herbaceous – poverty rush (<i>Juncus tenuis</i>), tapertip rush (<i>Juncus acuminatus</i>), sedges, woolgrass (<i>Scirpus cyperinus</i>), spike bentgrass (<i>Agrostis exarata</i>), common velvetgrass (<i>Holcus lanatus</i>).		
Soils	Soil matrices were 10YR 2/2 to seven inches. A second layer from seven to 13 inches had a matrix of 10YR 3/3 with concentrations. Hydric soils are present because soils meet the definition of a hydric soil because: saturated or ponded for long periods during the growing season. In addition, presence of a hydrophytic plant community and wetland hydrology indicate that the soils are hydric.		
Hydrology	Wetland situated in disturbed sloping area on WSDOT maintenance yard. Surface run-on from precipitation from upslope maintenance yard is the primary source of hydrology. Water saturates the upper portion of the soil and small depressions impound water. Water leaves the wetland sheet flowing across the access road to the maintenance yard, and enters a ditch, before draining to Lake Creek.		
Rationale for Delineation	Slope wetland supporting hydrophytic vegetation and wetland hydrology. This is a newly forming wetland area due to activities associated with the WSDOT maintenance yard. Soil excavation in this area allows water to pond and subsequently a hydrophytic plant community has established. Because this wetland is located in an active maintenance yard, future activities could again alter hydrology and vegetation and wetland indicators could disappear.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 5 rates is Category IV.		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to gentle sloping topography with depressions and dense herbaceous vegetation, allowing water to move through system relatively slowly and fine sediments to settle out of the water column; high opportunity because WSDOT maintenance yard is directly up slope, with the majority of sheet flow off the maintenance yard flowing through wetland before entering Lake Creek. High potential to trap nutrients and toxicants due to sloping topography with depressions and dense herbaceous vegetation; high opportunity because maintenance yard up slope contributes inputs.		
Hydrologic	Moderate potential to alter flood flow due to small densely vegetated depressions able to retain runoff; opportunity is moderate as wetland receives surface runoff from upslope maintenance but water leaves wetland as sheetflow across access road flowing to ditch draining to Lake Creek. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	Low habitat quality due to lacking or low functioning buffer, surrounding WSDOT maintenance yard, and small wetland size.		
Buffer Condition	Buffer function is limited for the entire circumference of the wetland. Half of the wetland lacks a buffer and is bordered by a gravel road accessing the WSDOT maintenance yard. The other half of has a sloping buffer on the southern end of the maintenance yard with disturbed/compacted soils dominated by upland pasture grasses and some invasive species. Upland grasses to the north may provide some hydrologic and water quality functions.		

Table 7. Wetland 6 summary.

WETLAND 6 – INFORMATION SUMMARY		
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.05 acre
	Cowardin Classification	PSS
	HGM Classification	slope
	Wetland Data Sheets	Appendix C; Sampling Point W6-SP1
	Upland Data Sheets	Appendix C; Sampling Point W6-SP2
	Dominant Vegetation	Trees – none. Shrubs –red alder, salmonberry, Himalayan blackberry (<i>Rubus armeniacus</i>) Herbaceous – soft rush (<i>Juncus effusus</i>), sedges
Soils	Soil to 16 inches had a depleted matrix of 10YR 4/2 with concentrations. Indicator Depleted Matrix (F3).	
Hydrology	Wetland situated on a slope surrounded by an old temporary access road. Water perches on a disturbed/compacted soils. Hydrology is mainly precipitation driven with surface run-on from upslope areas. Water leaves the wetland as sheet flow flowing down old road and into W7.	
Rationale for Delineation	Slope wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and wetland hydrology indicators helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 6 is Category III.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to sloping topography with dense herbaceous vegetation; moderate opportunity because wetland receives surface water runoff. Moderate potential to trap nutrients and toxicants due to sloping topography with small depressions and herbaceous vegetation; moderate opportunity because wetland receives surface water runoff.	
Hydrologic	Moderate potential to alter flood flow due to gentle sloping topography with dense woody and herbaceous vegetation; moderate opportunity due to surface water run-on. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality due to wetland area with herbaceous vegetation and shrubs and seasonal shallow surface ponding. Buffer connects forested uplands, other wetlands, and a stream. Wetland provides habitat for passerine birds and small mammals.	
Buffer Condition	Buffer function is high for the entire circumference of the wetland. The buffer is a combination of black cottonwood forest with shrubby understory and previously disturbed areas that have red alder and black cottonwood saplings establishing. These areas also include an old abandoned temporary access road. The up-slope buffer areas provide hydrologic functions. The buffer provides wildlife habitat functions.	

Table 8. Wetland 7 summary.

WETLAND 7 – INFORMATION SUMMARY		
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.01 acre
	Cowardin Classification	PEM
	HGM Classification	depressional
Wetland Data Sheets		Appendix C; Sampling Point W7-SP1
Upland Data Sheets		Appendix C; Sampling Point W7-SP2
Dominant Vegetation	Trees – none. Shrubs – hardhack, red alder, willows Herbaceous – soft rush, eggbract sedge (<i>Carex ovalis</i>), common tansy (<i>Tanacetum vulgare</i>), spike bentgrass	
Soils	Soil to four inches was a depleted matrix of 10YR 4/2 with concentrations. A restrictive layer of gravels present at four inches. Indicator Depleted Matrix (F3).	
Hydrology	Wetland situated on a slope with small depressions able to impound surface water. Water perches on a compacted/disturbed soil layer on top of an old temporary access road. Hydrology is mainly precipitation driven with surface run-on from upslope areas and W6.	
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and wetland hydrology indicators helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 7 is Category IV.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to depressional topography with dense herbaceous vegetation; moderate opportunity because wetland receives surface water runoff. Moderate potential to trap nutrients and toxicants due to sloping topography with small depressions and herbaceous vegetation; moderate opportunity because wetland receives surface water runoff.	
Hydrologic	Moderate potential to alter flood flow due to gentle depressional topography with dense woody and herbaceous vegetation; moderate opportunity due to surface water run-on. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality due to wetland area with herbaceous vegetation and seasonal shallow surface ponding. Buffer connects forested uplands, other wetlands, and a stream. Wetland provides habitat for passerine birds and small mammals.	
Buffer Condition	Buffer function is limited for half of the circumference of the wetland. This section of buffer is bordered by SE 104 th St. The other half of the buffer is a combination of black cottonwood forest with shrubby understory and previously disturbed areas that have red alder and black cottonwood saplings establishing. These areas also include an old abandoned temporary access road. The up-slope buffer areas provide hydrologic and habitat functions.	

Table 9. Wetland 8 summary.

WETLAND 8 – INFORMATION SUMMARY		
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co./USFS Buffer Width	80 feet/100 feet
	Wetland Size	0.07 acre
	Cowardin Classification	PFO
	HGM Classification	depressional
	Wetland Data Sheets	Appendix C; Sampling Point W8-SP1
	Upland Data Sheets	Appendix C; Sampling Point W8-SP2
Dominant Vegetation	Trees – Black cottonwood, red alder Shrubs – redosier dogwood (<i>Cornus alba</i>), Pacific ninebark Herbaceous – reed canarygrass, trailing blackberry	
Soils	Hydric soils are present in this wetland. Soils were too wet to observe during the 2012 field visit due to heavy rains. Matrix colors of 10YR 4/2 with redox observed. Soils meet the definition of a hydric soil: soils that are saturated or ponded for long periods during the growing season.	
Hydrology	A high water table is the dominant hydrology source. Precipitation and runoff from SE 104 th St contribute secondary inputs. Surface water leaves the wetland through a culvert draining to a ditch conveying surface water to Stream 4.	
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and hydrology and topography helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 8 is Category III.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to depressional topography with long periods of ponding and a constricted outlet (a culvert), allowing water to move through system relatively slowly and fine sediments to settle out of the water column; moderate opportunity from upland areas and roadside runoff. High potential to trap nutrients and toxicants due to depressional topography with a constricted outlet that ponds greater than two feet of water for long periods; high opportunity because stormwater runoff from SE 104 th St. drains directly to wetland.	
Hydrologic	High potential to alter flood flow due to depression with constricted outlet and ability to impound significant amounts of surface water for long periods; opportunity is high due to run-on from upslope forested areas and stormwater from adjacent street. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality due to connectivity with forested uplands, other wetlands, and streams. Wetland provides minimal habitat for passerine birds and small mammals.	
Buffer Condition	Buffer function is moderate for half of the circumference of the wetland. Wildlife habitat is limited due to a large ROW fence which bisects the buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Western red cedar and Douglas fir dominate the over story with salal and vine maple dominating the shrub layer. The wetland receives stormwater from SE 104 th St. The south side does not have a functioning or regulated buffer. It is a mowed and maintained strip of road ROW along SE 104 th St.	

Table 10. Wetland 9 summary.

WETLAND 9 – INFORMATION SUMMARY		
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.03 acre
	Cowardin Classification	PSS
	HGM Classification	slope
	Wetland Data Sheets	Appendix C; Sampling Point W9-SP1
	Upland Data Sheets	Appendix C; Sampling Point W9-SP2
Dominant Vegetation	Trees – none Shrubs – salmonberry, hardhack, twinberry honeysuckle (<i>Lonicera involucrata</i>), western red cedar Herbaceous – creeping buttercup (<i>Ranunculus repens</i>), trailing blackberry	
Soils	Hydric soils are present in this wetland. Soils were too wet to observe during the 2012 field visit due to heavy rains. Soils meet the definition of a hydric soil: soils that are saturated or ponded for long periods during the growing season.	
Hydrology	A high water table is the primary source of hydrology in this wetland. Surface and subsurface run-on during and following precipitation events provide secondary hydrologic inputs. A ditch conveying runoff from upslope wetlands (W10 - W12) and run-on from precipitation events parallels the I-90 on ramp at toe of slope and flows through this wetland. This ditch runs through W9 and ultimately drains to Stream 5.	
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Vegetation, hydrology and topography helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 9 is a Category III.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to densely vegetated slope with depressions; moderate opportunity because wetland is down slope from I-90 and other wetlands that also contribute surface flows through this wetland. Moderate potential to trap nutrients and toxicants due to vegetated slope with depressions; moderate opportunity because wetland is down slope from I-90 and other wetlands in similar landscape position below I-90, that contribute surface flows through this wetland.	
Hydrologic	Moderate potential to alter flood flow due to sloping topography with vegetated depressions; opportunity is moderate because wetland receives hydrology from up slope wetlands, uplands, and stormwater and drains to Stream 5. Erosion control and shoreline stabilization functions provided at a low level. Wetland is not directly connected to streambank, however it drains to a ditch draining to Stream 5.	
Habitat	Low habitat quality due to tall ROW fence directly adjacent to wetland, cutting off connection with upland buffer areas. Fence limits wildlife connectivity. Small size of wetland also limits habitat functions. Minimal habitat for passerine birds, small mammals, and aquatic invertebrates.	
Buffer Condition	Buffer function is moderate. Wildlife habitat is limited due to a large ROW fence which bisects the buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Western red cedar and Douglas fir dominate the over story with salal dominating in the shrub layer. The wetland is down-slope form I-90 and likely receives stormwater or other sources of poor water quality inputs.	

Table 11. Wetland 10 summary.

WETLAND 10 – INFORMATION SUMMARY		
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.90 acre
	Cowardin Classification	PFO
	HGM Classification	slope/depressional
Wetland Data Sheets		Appendix C; Sampling Point W10-SP1
Upland Data Sheets		Appendix C; Sampling Point W10-SP2 & W11-SP2
Dominant Vegetation	Trees – black cottonwood, Shrubs – hardhack, western red cedar Herbaceous – soft rush, spike bentgrass, sedges	
Soils	Soil to six inches was a depleted matrix of 10YR 3/1 with concentrations. A restrictive layer of gravels present at six inches. Indicator Depleted Matrix (F3).	
Hydrology	Wetland situated on a slope with some depressional areas able to impound surface water. Previous land use activities appear to have compacted soils and cleared/disturbed vegetation. Precipitation and surface run-on from upslope areas perches on compacted soils in sloping areas and runs down slope to a ditch along SE 104 th St. This ditch drains surface water leaving the wetland to Stream 5.	
Rationale for Delineation	Slope and depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and hydric soils helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 10 is Category III.	
Wetland Functions Summary		
Water Quality	High potential to trap sediments due to sloping topography with depressions and densely established herbaceous and woody vegetation; high opportunity because significant sources of stormwater sheet flow and channel flow through the wetland. High potential to trap nutrients and toxicants due to depressions with dense herbaceous vegetation; high opportunity because wetland receives stormwater runoff from I-90 and up-slope wetlands that also receive runoff from I-90.	
Hydrologic	Moderate potential to alter flood flow due to ability to slow small amounts of water as it drains through vegetated areas with variable topography; opportunity is high as significant amounts of water flow through the wetland and then into Stream 5 during and following precipitation events. Low potential to reduce erosion and stabilize banks. Wetland drains to Stream 5 through a ditch which has some ability to reduce erosion and stabilize banks.	
Habitat	Moderate habitat quality due to forested plant community with other vegetation strata below and seasonal inundation. Habitat for passerine birds, small mammals, and amphibians.	
Buffer Condition	Buffer function is high for the circumference of the wetland. The buffer is in a previously disturbed area that has a mixed stand of red alder and black cottonwood with Douglas-fir, western red cedar, and hardhack in the understory. An old abandoned temporary access road borders the east side of the wetland. The up-slope buffer areas provide hydrologic functions. Poor water quality in-puts enter wetland. Wildlife habitat is limited due to a large ROW fence which bisects the wetland and buffer, fragmenting the forested habitat along the current WSDOT ROW from other forested areas.	

Table 12. Wetland 11 summary.

WETLAND 11 – INFORMATION SUMMARY			
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	III	
	King Co. Buffer Width	80 feet	
	Wetland Size	0.35 acre	
	Cowardin Classification	PFO	
	HGM Classification	slope/depressional	
	Wetland Data Sheets	Appendix C; Sampling Point W11-SP1	
Upland Data Sheets	Appendix C; Sampling Point W10-SP2 & W11-SP2		
Dominant Vegetation	Trees – black cottonwood, Shrubs – black cottonwood, hardhack, western red cedar, Herbaceous – soft rush, spike bentgrass, tapertip rush (<i>Juncus acuminatus</i>), common selfheal (<i>Prunella vulgaris</i>)		
Soils	Soil to four inches was a depleted matrix of 10YR 4/1 with concentrations. A restrictive layer of gravels present at four inches. Indicator Depleted Matrix (F3).		
Hydrology	Wetland situated on a slope with some depressional areas able to impound surface water. Previous land use activities appear to have compacted soils and cleared/disturbed vegetation. Precipitation and surface run-on from upslope areas perches on compacted soils in sloping areas and runs down slope to a ditched area with depressions along SE 104 th St where water ponds for long periods. This ditch drains through the ditched area in W10 and ultimately to Stream 5.		
Rationale for Delineation	Slope and depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and hydric soils helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 11 is Category III.		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to sloping topography with depressions and densely established herbaceous and woody vegetation; high opportunity because significant sources of stormwater sheet flow and channel flow through the wetland. High potential to trap nutrients and toxicants due to depressions with dense herbaceous vegetation; high opportunity because wetland receives stormwater runoff from I-90 and an up-slope wetland that also receives runoff from I-90.		
Hydrologic	Moderate potential to alter flood flow due to ability to slow small amounts of water as it drains through vegetated areas with variable topography; opportunity is high as significant amounts of water flow through the wetland, then through W10, and on to Stream 5 during and following precipitation events. Low potential to reduce erosion and stabilize banks. Wetland drains to Stream 5 through a ditch which has some ability to reduce erosion and stabilize banks.		
Habitat	Moderate habitat quality due to forested plant community with other vegetation strata below and seasonal inundation. Habitat for passerine birds, small mammals, and amphibians.		
Buffer Condition	Buffer function is high for the majority of the circumference of the wetland. The buffer is a previously disturbed area that has a mixed stand of red alder and black cottonwood with Douglas-fir, western red cedar, and hardhack in the understory. An old abandoned temporary access road borders the west side of the wetland and SE 104 th St borders the southern boundary. The up-slope buffer areas provide hydrologic functions. Poor water quality in-puts enter wetland. The buffer provides wildlife habitat functions.		

Table 13. Wetland 12 summary.

WETLAND 12 – INFORMATION SUMMARY			
Location:	SE quadrant of I-90/SR 18 intersection, between SE 104 th St and eastbound I-90 on ramp		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	II	
	King Co. Buffer Width	100 feet	
	Wetland Size	0.11 acre	
	Cowardin Classification	PFO	
	HGM Classification	slope/depressional	
	Wetland Data Sheets	Appendix C; Sampling Point W12-SP1	
Upland Data Sheets	Appendix C; Sampling Point W12-SP2		
Dominant Vegetation	Trees – western red cedar, red alder, vine maple Shrubs – salmonberry, twinberry honeysuckle Herbaceous – American skunkcabbage, western swordfern on hummocks		
Soils	Soil matrices of 10YR 4/2 with concentrations and depletions to greater than 16 inches. Indicator Depleted Matrix (F3).		
Hydrology	Wetland situated on a forested slope below and south of I-90 with a water table intercepting a slope; creating a seep. Inundation present in the flatter areas or in small depressions on the slope. Precipitation and stormwater runoff from I-90 contribute secondary hydrologic inputs. Surface water leaves the wetland and flows into the upper portion of W11 near the ROW fence.		
Rationale for Delineation	Slope and depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Obvious change in vegetation community and wetland hydrology indicators helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 12 is Category II.		
Wetland Functions Summary			
Water Quality	High potential to trap sediments due to vegetated surface depressions; high opportunity because significant sources of stormwater enter and flow through the wetland. High potential to trap nutrients and toxicants due to sloping vegetated depressions and soils with high organic matter content; high opportunity because stormwater from I-90 flows through the wetland.		
Hydrologic	Moderate potential to alter flood flow due to densely vegetated areas with depressions; opportunity is moderate as stormwater runoff from I-90 drains through the wetland and wetland occurs high in watershed. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	Low habitat quality due to extremely limited habitat connectivity, as wetland is confined on one side by I-90 and the ROW fence on the other. Function also limited by high stormwater inputs. Provides limited habitat for passerine birds, small mammals, and amphibians.		
Buffer Condition	Buffer function is moderate. Wildlife habitat is limited due to a large ROW fence which bisects the buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Western red cedar, Sitka spruce, and red alder dominate the over story with salmonberry and vine maple in the shrub layer. The wetland is down-slope from I-90 and may receive stormwater or have other sources of poor water quality inputs.		

Table 14. Wetland 13 summary.

WETLAND 13 – INFORMATION SUMMARY		
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90 off ramp at Exit 25	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	II
	King Co. Buffer Width	195 feet
	Wetland Size	0.16 acre
	Cowardin Classification	PFO
	HGM Classification	depressional
	Wetland Data Sheets	Appendix C; Sampling Point W13-SP1
Upland Data Sheets	Appendix C; Sampling Point W13-SP2	
Dominant Vegetation	Trees – black cottonwood (<i>Populus balsamifera</i>), vine maple (<i>Acer circinatum</i>), Cascara buckthorn (<i>Frangula purshiana</i>) Shrubs – salmonberry, vine maple, Devil's club Herbaceous - western swordfern (<i>Polystichum munitum</i>), common ladyfern (<i>Athyrium filix-femina</i>), trailing blackberry (<i>Rubus ursinus</i>)	
Soils	Soil matrices were 10YR 3/1 to greater than 16 inches with concentrations. Indicator Redox Dark Surface (F6).	
Hydrology	Depressional wetland with a constricted outlet situated on a forested terrace above and to the east of SR 18 with a high water table as the dominant hydrology source. Precipitation contributes secondary hydrologic inputs. Outlet flow to a ditch draining to W14.	
Rationale for Delineation	Depressional wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Topographic break near toe of slope of the depression and vegetation helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 13 is Category II.	
Wetland Functions Summary		
Water Quality	High potential to trap sediments due to densely vegetated depression with a constricted outlet, allowing water to move through system relatively slowly and fine sediments to settle out of the water column; low opportunity because significant sources of sediments are not present in surrounding intact upland forest areas. High potential to trap nutrients and toxicants due to densely vegetated depressional topography and mineral soils with high organic content; low opportunity because stormwater runoff from roadways or other sources does not enter the wetland.	
Hydrologic	High potential to alter flood flow due to vegetated depressional topography with a constricted outlet; opportunity is as wetland captures and slows runoff from upland forest areas during and following precipitation events. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	High habitat quality due to habitat connectivity with other forested uplands and wetlands. Good canopy stratification and variable water regimen throughout the growing season provide habitat for passerine birds, small mammals, amphibians, and deer.	
Buffer Condition	Buffer function is high for the entire circumference of the wetland with mature forest providing wildlife habitat, shade, and organic matter inputs. Red alder, western hemlock, and bigleaf maple (<i>Acer macrophyllum</i>) dominate the overstory with salmonberry, vine maple, and red huckleberry (<i>Vaccinium parvifolium</i>) in the shrub layer. The wetland is up slope from I-90 and does not receive stormwater or have other sources of poor water quality inputs.	

Table 15. Wetland 14 summary.

WETLAND 14 – INFORMATION SUMMARY			
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90 off ramp at Exit 25		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	II	
	King Co. Buffer Width	195 feet	
	Wetland Size	0.23 acre	
	Cowardin Classification	PFO/PSS	
	HGM Classification	depressional/slope	
	Wetland Data Sheets	Appendix C; Sampling Point W14-SP1, W14-SP3	
Upland Data Sheets	Appendix C; Sampling Point W14-SP2, W14-SP4		
Dominant Vegetation	Trees – red alder, black cottonwood, Shrubs – salmonberry, vine maple, Cascara buckthorn, Herbaceous - youth on age, common ladyfern, trailing blackberry, sedges, scouring rush horsetail (<i>Equisetum hyemale</i>), reed canarygrass		
Soils	Soils from in the upper two layers were 10YR 2/1 or 10YR 3/2. Concentrations present in some layers. Two different soil types were observed in different areas of the wetland. Some had high organic content in loamy mucky mineral soils meeting Indicator Loamy Mucky Mineral (F1), while others had higher mineral content meeting Indicator Redox Dark Surface (F6).		
Hydrology	Depressional and slope wetland situated in a forested drainage above and to the north of I-90 with a high water table and surface and subsurface run-on as the dominant hydrology sources. A water table intersects the slope and seeps down the slope in some areas. Two ditches draining to the depressional portion of the wetland contribute secondary hydrologic inputs to the lowest portion of the wetland. Wetland lack a surface outlet.		
Rationale for Delineation	Depressional and slope wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. Hydrology and soils helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 14 is Category II.		
Wetland Functions Summary			
Water Quality	High potential to trap sediments in vegetated closed depressional topographic area impounding water and allowing fine sediments to settle out of the water column; low opportunity because stormwater from upland forested areas enters the wetland and is not carrying significant amounts of sediment. High potential to trap nutrients and toxicants in closed depression with some organic matter in the soil; low opportunity because stormwater inputs are from forested upland areas not likely carrying nutrients and toxicants.		
Hydrologic	High potential to alter flood flow due to closed depression at bottom of slope able to retain surface water during and following precipitation events; opportunity is high as water sheet flows off upland forested areas during and after storms. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	High habitat quality due to habitat connectivity with other forested uplands and wetlands. Good canopy stratification and variable water regimen throughout the growing season provide habitat for passerine birds, small mammals, amphibians, and deer.		
Buffer Condition	Buffer function is moderate for the majority of the circumference of the wetland with mature forest providing shade and organic matter inputs. Wildlife habitat is limited due to a large ROW fence which bisects the wetland and buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Western hemlock, red alder, and black cottonwood dominate the overstory with salmonberry, vine maple, and twinberry honeysuckle (<i>Lonicera involucrata</i>) in the shrub layer. The wetland is up slope form I-90 and does not receive polluted stormwater or have other sources of poor water quality inputs.		

Table 16. Wetland 15 summary.

WETLAND 15 – INFORMATION SUMMARY	
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90 off ramp at Exit 25
	Local Jurisdiction
	King County
	WRIA
	7 Snohomish
	Ecology & Local Rating
	III
	King Co. Buffer Width
	80 feet
	Wetland Size
	0.04 acre
	Cowardin Classification
	PSS
	HGM Classification
	slope
	Wetland Data Sheets
	Appendix C; Sampling Point W15-SP1
	Upland Data Sheets
	Appendix C; Sampling Point W15-SP2
Dominant Vegetation	Trees – none Shrubs – hardhack, Scouler's willow (<i>Salix scouleriana</i>), Cascara buckthorn Herbaceous – soft rush, spike bentgrass, red fescue (<i>Festuca rubra</i>), sedges
Soils	A deplete matrix of 2.5Y 5/1 with concentrations is present from zero to six inches. A gravel hardpan restrictive layer present at six inches below the surface. Indicator Depleted Matrix (F3).
Hydrology	Wetland has shallow soils above a restrictive layer which perch water during the rainy season. Precipitation and run-on are the primary hydrologic inputs. Water leaves the wetland through infiltration and as sheetflow following precipitation events.
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Soils helped determine wetland boundary.
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 15 is Category III.
Wetland Functions Summary	
Water Quality	Low potential to trap sediments due to vegetated slope with only a few small depressions; low opportunity because significant sources of sediments are not present. Moderate potential to trap nutrients and toxicants due to sloping topography with only a few vegetated depressions; low opportunity because inputs are low; I-90 is down-slope of the wetland and surrounding upland areas are forested.
Hydrologic	Low potential to alter flood flow due to small size of wetland and sloping topography with an unconstricted outlet and few depressions; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.
Habitat	Moderate habitat quality due to forested buffers and connection to other wetlands. Habitat connectivity limited because wetland is in ROW between I-90 and ROW fence. Wetland provides habitat for passerine birds and small mammals.
Buffer Condition	Buffer function is moderate for the majority of the circumference of the wetland with mature forest providing shade and organic matter inputs. Wildlife habitat is limited due to a large ROW fence which fragments the habitat along the current WSDOT ROW from other forested areas. Black cottonwood and Douglas-fir dominate the overstory with hardhack in the shrub layer. The wetland is up slope from I-90 and does not receive stormwater or have other sources of poor water quality inputs.

Table 17. Wetland 16 summary.

WETLAND 16 – INFORMATION SUMMARY			
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90, east of Exit 25 off ramp		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	III	
	King Co. Buffer Width	80 feet	
	Wetland Size	0.07 acre	
	Cowardin Classification	PSS/PEM	
	HGM Classification	slope	
	Wetland Data Sheets	Appendix C; Sampling Point W16-SP1, W16-SP3	
	Upland Data Sheets	Appendix C; Sampling Point W16-SP2	
Dominant Vegetation	Trees – none, Shrubs – hardhack and salmonberry Herbaceous – soft rush, small-fruited bulrush (<i>Scirpus microcarpus</i>), colonial bentgrass, giant horsetail (<i>Equisetum telmateia</i>), common ladyfern		
Soils	Dark 10YR 2/2 soils from zero to three inches. Depleted matrices of 10YR 4/2 with concentrations present from three to ten inches underlain by a restrictive layer of cobbles and gravel. Indicators Depleted Below Dark Surface (A11) and Depleted Matrix (F3).		
Hydrology	A high water table is the primary source of hydrology in small depressional areas of the wetland. A water table intersecting the slope and then saturating the slope below is the primary source of hydrology in the slope wetland area. Surface and subsurface run-on during and following precipitation events provide secondary hydrologic inputs. Water leaves the wetland as sheetflow into the roadside ditch at the toe of slope.		
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Soils and vegetation helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 16 is Category III.		
Wetland Functions Summary			
Water Quality	Moderate potential to trap sediments due to sloping topography with dense herbaceous vegetation and depressional areas in the western portion of the wetland; low opportunity because significant sources of sediments are not present. Moderate potential to trap nutrients and toxicants due to sloping topography with dense herbaceous vegetation and depressional areas in the western portion of the wetland; low opportunity because inputs are low; stormwater from I-90 only enters the lowest portion of the wetland that is ditched at the toe of slope of the I-90 roadway structure.		
Hydrologic	Low potential to alter flood flow due to small size of wetland and sloping topography with an unconstricted outlet and few depressions; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	Moderate habitat quality due to forested buffers and connection to other wetlands. Habitat connectivity limited because wetland is in ROW between I-90 and ROW fence. Wetland provides habitat for passerine birds, small mammals, and possibly amphibians.		
Buffer Condition	Buffer function is limited for the majority of the circumference of the wetland. The wetland is bordered by the I-90 road prism to the south and by a tall ROW fence to the north. Stormwater from I-90 flows directly into a small portion of the wetland that is ditched along I-90, and the fence creates habitat fragmentation. Some deciduous trees and shrubs are directly adjacent to the wetland and may provide limited buffering functions.		

Table 18. Wetland 17 summary.

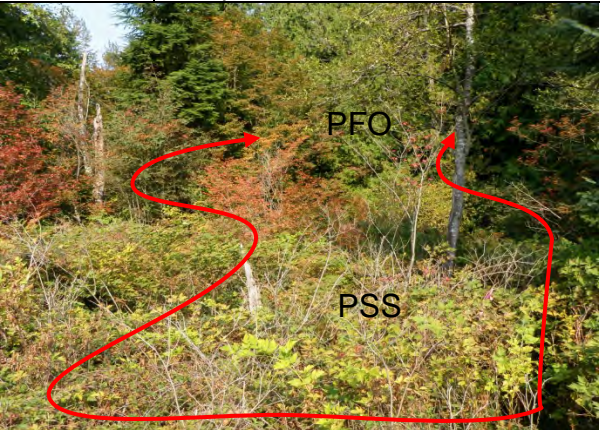

WETLAND 17 – INFORMATION SUMMARY		
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90, east of Exit 25 off ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.11 acre
	Cowardin Classification	PFO/PSS
	HGM Classification	slope
	Wetland Data Sheets	Appendix C; Sampling Point W17-SP1, W17-SP3
	Upland Data Sheets	Appendix C; Sampling Point W17-SP2, W17-SP4
Dominant Vegetation	Trees – western red cedar Shrubs – hardhack and salmonberry Herbaceous – common ladyfern, giant horsetail	
Soils	Soils were dark 10YR 2/1 from zero to 8 inches. The matrix from 8 to 12 inches was 10YR3/2 with concentrations. Indicator Redox Dark Surface (F6). In other areas soils meet Indicator Loamy Mucky Mineral (F1)	
Hydrology	Slope wetland situated in a forested drainage above and to the north of I-90 which receives surface and subsurface run-on as the dominant hydrology source. A water table intersects the slope and seeps down the slope in some areas. A water conveyance structure is located at the lowest point in the wetland at toe of slope of the I-90 roadway structure, allowing surface water to leave the wetland through this constricted outlet.	
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Soils and vegetation helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 17 is Category III.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to sloping topography with dense herbaceous vegetation and small depressional areas; low opportunity because significant sources of sediments are not present. Moderate potential to trap nutrients and toxicants due to sloping topography with dense herbaceous vegetation and small depressional areas; low opportunity because inputs are low; I-90 is down-slope of the wetland and surrounding upland areas are forested.	
Hydrologic	Low potential to alter flood flow due to small size of wetland and sloping topography with few depressions and a constricted outlet through a culvert; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality due to forested buffers and connection to other wetlands. Habitat connectivity limited because wetland is in ROW between I-90 and ROW fence. Wetland provides habitat for passerine birds, small mammals, and possibly amphibians.	
Buffer Condition	Buffer function is moderate for the majority of the circumference of the wetland with mature forest providing shade and organic matter inputs. Wildlife habitat is limited due to the tall ROW fence which bisects the wetland and buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Sitka spruce, black cottonwood, Douglas-fir, and red alder dominate the over story with salmonberry, vine maple, and Devil's club in the shrub layer. The wetland is up slope from I-90 and does not receive stormwater or have other sources of poor water quality inputs.	

Table 19. Wetland 18 summary.

WETLAND 18 – INFORMATION SUMMARY			
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90, east of Exit 25 off ramp		
	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	IV	
	King Co. Buffer Width	50 feet	
	Wetland Size	0.14 acre	
	Cowardin Classification	PEM	
	HGM Classification	slope	
	Wetland Data Sheets	Appendix C; Sampling Point W18-SP1	
	Upland Data Sheets	Appendix C; Sampling Point W18-SP2	
Dominant Vegetation	Trees and Shrubs – none Herbaceous – giant horsetail, common velvetgrass, red fescue		
Soils	Soils from zero to > 12 inches were 10YR 3/2 with concentrations and depletions. Indicator Redox Dark Surface (F6) and Depleted Dark Surface (F7).		
Hydrology	A water table intersecting the slope and then saturating the slope below is the primary source of hydrology. Surface and subsurface run-on during and following precipitation events provide secondary hydrologic inputs. Water leaves the wetland as sheetflow into the roadside ditch at the toe of slope.		
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Soils and vegetation helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 18 is Category IV.		
Wetland Functions Summary			
Water Quality	Low potential to trap sediments due to steep vegetated slope lacking depressions; low opportunity because significant sources of sediments are not present. Low potential to trap nutrients and toxicants due to due to steep vegetated slope lacking depressions; low opportunity because inputs are low; I-90 is down-slope of the wetland and surrounding upland areas are forested.		
Hydrologic	Flood flow alteration functions not provided due to steep slopes without woody vegetation; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	Low habitat quality due to cutslope wetland in ROW between I-90 and ROW fence. Wetland provides minimal habitat for passerine birds and small mammals.		
Buffer Condition	Buffer function is limited for the majority of the circumference of the wetland. The wetland is bordered by the I-90 road prism to the south and by a tall ROW fence to the north. Stormwater from I-90 flows directly into a small portion of the wetland, and the fence creates habitat fragmentation. Some deciduous trees and shrubs are directly adjacent to the wetland and may provide limited buffering functions.

WETLAND 19 – INFORMATION SUMMARY			
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90, east of Exit 25 off ramp		
 wetland	Local Jurisdiction	King County	
	WRIA	7 Snohomish	
	Ecology & Local Rating	IV	
	King Co. Buffer Width	50 feet	
	Wetland Size	0.05 acre	
	Cowardin Classification	PSS	
	HGM Classification	slope	
	Wetland Data Sheets	Appendix C; Sampling Point W19-SP1	
Upland Data Sheets	Appendix C; Sampling Point W19-SP2		
Dominant Vegetation	Trees – none. Shrubs – salmonberry Herbaceous - youth on age, common ladyfern, sedges		
Soils	Soils from zero to ten inches were 10YR 2/1 with concentrations. A layer from 10 to 23 inches was 10YR 4/1 with concentrations and depletions. High organic content in this loamy mucky mineral soil. Indicators Depleted Below Dark Surface (A11), Loamy Mucky Mineral (F1), Depleted Matrix (F3), and Redox Dark Surface (F6).		
Hydrology	Slope wetland in a forested drainage above and north of I-90 with a high water table and surface and subsurface run-on as the dominant hydrology sources. A water table intersects the slope and seeps down the slope in some areas. A catch basin is present on the lowest end of the wetland draining surface water from the lowest part of the wetland as well as other adjacent areas.		
Rationale for Delineation	Slope wetland with hydric soils, supports hydrophytic vegetation, and wetland hydrology. All three factors helped determine wetland boundary.		
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 19 is Category IV.		
Wetland Functions Summary			
Water Quality	Low potential to trap sediments due to steep vegetated slope lacking depressions; low opportunity because significant sources of sediments are not present. Low potential to trap nutrients and toxicants due to due to steep vegetated slope lacking depressions; low opportunity because inputs are low; I-90 is down-slope of the wetland and surrounding upland areas are forested.		
Hydrologic	Low potential to alter flood flow due to sloping topography lacking depressions and a constricted outlet through a culvert/French drain; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.		
Habitat	Moderate habitat quality due to forested buffers and connection to other wetlands. Habitat connectivity limited due to ROW fence bisecting the wetland and buffer. Wetland provides habitat for passerine birds, small mammals, and deer.		
Buffer Condition	Buffer function is moderate for the majority of the circumference of the wetland with mature forest providing shade and organic matter inputs. Wildlife habitat is limited due to a large ROW fence which bisects the wetland and buffer, fragmenting the habitat along the current WSDOT ROW from other forested areas. Bigleaf maple, vine maple, red alder, and western red cedar dominate the over story with salmonberry in the shrub layer. The wetland is up slope form I-90 and does not receive stormwater or have other sources of poor water quality inputs.		

Table 21. Wetland 20 summary.

WETLAND 20 – INFORMATION SUMMARY		
Location:	NE quadrant of I-90/SR 18 intersection, north of eastbound I-90, east of Exit 25 off ramp	
	Local Jurisdiction	King County
	WRIA	7 Snohomish
	Ecology & Local Rating	III
	King Co. Buffer Width	80 feet
	Wetland Size	0.22 acre
	Cowardin Classification	PEM
	HGM Classification	slope
	Wetland Data Sheets	Appendix C; Sampling Point W20-SP1
	Upland Data Sheets	Appendix C; Sampling Point W20-SP2
Dominant Vegetation	Trees and shrubs – none Herbaceous – broadleaf cattail (<i>Typha latifolia</i>), sawbeak sedge (<i>Carex stipata</i>), common velvetgrass, soft rush, red fescue, quackgrass (<i>Elymus repens</i>)	
Soils	Soils from zero to >12 inches were 10YR 2/1 with concentrations. Indicator Redox Dark Surface (F6).	
Hydrology	A water table intersecting the slope and then saturating the slope below is the primary source of hydrology. Surface and subsurface run-on during and following precipitation events provide secondary hydrologic inputs. Water leaves the wetland as sheetflow into the roadside ditch at the toe of slope.	
Rationale for Delineation	Slope wetland with wetland hydrology, hydrophytic vegetation, and hydric soils. Soils and vegetation helped determine wetland boundary.	
Rationale for Local Rating	King County classifies wetlands based on the Washington State Wetland Rating System (King County 2012). Wetland 20 is Category III.	
Wetland Functions Summary		
Water Quality	Moderate potential to trap sediments due to sloping topography with dense herbaceous vegetation with small depressions; low opportunity because significant sources of sediments are not present. Moderate potential to trap nutrients and toxicants due to sloping topography with dense herbaceous vegetation and small depressional areas; low opportunity because inputs are low; stormwater from I-90 only enters the lowest portion of the wetland that is ditched at the toe of slope of the I-90 roadway structure.	
Hydrologic	Low potential to alter flood flow due to sloping topography with an unconstricted outlet and few depressions; opportunity is low due to forested upland areas not contributing significant amounts runoff. Erosion control and shoreline stabilization functions not provided because wetland lacks hydrologic surface connection with a stream.	
Habitat	Moderate habitat quality due to forested buffers and connection to other wetlands. Habitat connectivity limited due to ROW fence. Wetland provides habitat for passerine birds and small mammals.	
Buffer Condition	Buffer function is limited for the majority of the circumference of the wetland. The wetland is bordered by the I-90 road prism to the south and by a tall ROW fence to the north. Stormwater from I-90 flows directly into a small portion of the wetland, and the fence creates habitat fragmentation. Upland grasses and Himalayan blackberry (<i>Rubus armeniacus</i>) are present on the northern wetland boundary and may provide limited buffering functions.	

4.3.3. Wetland Functions

Physical characteristics of wetlands and their surroundings including HGM class, Cowardin class, buffer condition, and habitat connectivity influence the functions they perform. Wetlands in the project provide a range of water quality, hydrologic, and habitat functions (Table 22). Detailed functional summaries addressing these attributes are provided for each wetland (Tables 2- 21; Appendix E).

Wetlands in the project are headwater wetlands in the Upper Snoqualmie River watershed (BLM 2012). In general, these headwater wetlands filter toxicants from stormwater runoff from the transportation system and provide flood attenuation functions during and following precipitation events. Both of these functions help improve wildlife habitat lower in the watershed. Wetlands in the project are not likely to provide educational functions due to inaccessibility for a large groups and lack of adequate parking. Sensitive wildlife species are known to occur within the project (Section 4.5). Sensitive plants and habitats are not known within the project. Wetland 1 and W4 are Category I wetlands based on special characteristics for mature forested wetlands.

Table 22. Functions and values of the existing wetlands.

M = Moderate, indicating that the function is present and is of moderate quality

H = High, indicating that the function is present and is of higher quality

4.3.4. Wetland Buffers

State Route 18, I-90, SE 104th St, and a tall ROW fence bisecting some wetlands and/or buffers (W9 through W20) create breaks in the habitat corridor. Despite these setbacks to buffer functions, buffers in the project connect streams, riparian areas, other wetlands and provide various levels of screening, habitat, hydrologic, and water quality functions.

In general each wetland has a relatively high functioning portion of buffer with forests dominated by Douglas fir, western hemlock, western red cedar, and bigleaf maple. These buffer areas provide relatively high screening, habitat, and hydrologic functions, and moderate water quality functions. The ROW fence reduces wildlife functions in some buffers. Most wetlands in the project also have a portion of buffer directly adjacent to or near I-90 or SR 18 with the exception of the wetlands in the southeast quadrant (W6 through W12). Buffers near or adjacent to highways provide limited to moderate buffering function. Some buffers near or adjacent to highways have mature forested trees with understories of shrubs and herbaceous species (W1 through W4, W13, W14, W17, and W19). These buffer areas are able to provide relatively high buffering function including screening from the highway for wildlife, shading, organic matter inputs, and some water quality functions. Other buffers near or adjacent to highways (W12, W15, W16, W18, and W20) provide little water quality, hydrologic, and wildlife functions due to vegetation generally maintained by WSDOT maintenance activities in the I-90 ROW, or lack of buffers where wetlands abut toe of slope of the roadway structure.

Forested buffers west of wetlands in the southwest quadrant are on USFS or WDNR land. The southeast quadrant is bordered by mixed deciduous and coniferous forested areas owned by USFS and King County, with low density rural residential areas west of Echo Lake. Buffer areas north of I-90 are in private ownership and are predominantly forested with native coniferous species. In general, these buffers provide high buffering functions.

Invasive species are present but cover is low in wetland buffers, generally providing less than five percent cover. Invasive species cover is higher in buffer areas adjacent to the road prism and ROW. Himalayan blackberry and cut-leaf blackberry were the common invasive species established in the buffers.

Figure 5. Photo of typical existing mature forested and roadside wetland buffers.

4.4. Streams

Lake Creek and three unnamed and unmapped streams were identified within the study area and one unnamed and unmapped stream was identified directly adjacent to the eastern boundary of the project (Tables 23 through 28). It is assumed that all of these streams may provide fish habitat for resident or anadromous fish. Lake Creek connects to the Raging River approximately one linear mile west of the study area downstream. Lake Creek has documented fish including Chinook and coho salmon and steelhead trout (WDFW 2010).

Streams 1 and 2 flow through straight, ditched channels below the SR 18 roadway structure and generally do not provide fish habitat but may provide refugia for juvenile fish during high flow events in Lake Creek. Streams 1, 2, and Lake Creek/3 have or may have portions flowing through USFS property (Appendix A-1). Streams 4 and 5 likely converge in a reconnoitered wetland east of SE 104th St, before draining to Lake Creek east of the project. These two streams are on WSDOT ROW or King County property (Appendix A-1). Streams 4 and 5 are assumed to provide fish habitat due to their connection to Lake Creek. It is unknown if culverts under SE 104th St. are fish passable. These culverts connect the portions of Streams 4 and 5 within the project to the section of the converged streams in the reconnoitered wetland. The portion of Streams 4 and 5 within the study area may be cut off from potential fish bearing portions of the stream by these culverts.

Table 23. Streams within the project

Stream ^a	Stream Type ^b	King Co. ^c / USFS ^d Buffer Width (feet)
1	assumed F	fish presence assumed = 165/300
2	assumed F	fish presence assumed = 165/300
Lake Creek/3	F	165/300
4	assumed F	fish presence assumed = 165
5	assumed F	fish presence assumed = 165

^a Stream identifier

^b WDNR stream types. Type F = waters provide fish habitat (WDNR 2012)

^c King County buffers applied for streams outside the UGA (King County 2012)

^d USFS buffers applied for fish-bearing streams for streams. USFS buffers only provided for streams that have or may have portions occurring on USFS property (USDA, USFS, USDI, BLM 1994)

Table 24. Stream 1 summary

STREAM 1 - INFORMATION SUMMARY		
Stream Name	unnamed stream – Stream 1	
	WRIA ID #	07-0393(a)
	Jurisdiction for portion of stream in study area	King County/USFS
	DNR Stream Type	assumed type F, seasonal
	King County/USFS Buffer Width	165 feet/300 feet
Location of Stream Relative to Project	Stream 1 is outside of the study area. The stream is included in this report despite falling outside of the potential impact areas of the project because it is directly adjacent to SR 18 eastbound lanes at toe of slope.	
Connectivity (where stream flows from/to)	The creek has seasonal flows originating from two sources. Surface water flows out of a large reconnoitered wetland east of SR 18 and contributes flows to this creek. A second hydrologic input is from a culvert flowing east under SR 18, draining surface water from W2, contributing flows to this creek's headwaters. The creek parallels eastbound SR 18, flowing north, and empties into Lake Creek just upstream of the Lake Creek culvert under SR 18 (Figure 3; Appendix B).	
Fish Presence	Due to the highly channelized character of this stream, necessary habitat elements required to support fish are not present, despite its connection to Lake Creek. It is possible the creek may provide refugia for juvenile fish during high flows in Lake Creek. Fish presence is not documented in this creek.	
Habitat	The creek is generally channelized at the toe of slope of eastbound SR 18. It lacks riffle/pool complexes and channel migration or meanders. Substrates are silty mud with some gravels. Overhanging coniferous and deciduous trees and shrubs contribute organic matter, small amounts of woody debris, and shade.	
Riparian/Buffer Condition	Riparian vegetation is generally intact on the east side of Stream 1 and consists of mature forested vegetation in reconnoitered wetlands east of SR 18 dominated by red alder and western red cedar. A skinny strip of buffer, averaging approximately 20 feet wide is present in some locations between the western OHWM of Stream 1 and toe of slope of eastbound SR 18. In other areas the western OHWM is at or within approximately five feet of toe of slope of the SR 18 road prism. Portions of this western creek buffer are dominated by salmonberry which provides some limited screening function from SR 18. Other western buffer areas are dominated by grasses and are maintained by routine highway maintenance activities.	

Table 25. Stream 2 summary

STREAM 2 - INFORMATION SUMMARY		
Stream Name	unnamed stream - Stream 2	
	WRIA ID #	07-0393(b)
	Jurisdiction for portion of stream in study area	King County/USFS
	DNR Stream Type	assumed type F, seasonal
	King County/USFS Buffer Width	165 feet/300 feet
Location of Stream Relative to Project	Stream 2 is entirely within the study area. It parallels the westbound lanes of SR 18 near toe of slope of roadway structure, and runs along the eastern boundary of W4, and then converges with Lake Creek.	
Connectivity (where stream flows from/to)	The creek has seasonal flows originating near the southeastern boundary of W4. A culvert under SR 18 allows flows from Stream 1 to pass under the highway and enter the headwaters of this creek. The creek parallels westbound SR 18, flowing north, and empties into Lake Creek on the northeastern boundary of W4 (Figure 3; Appendix B).	
Fish Presence	Due to the highly channelized character of this stream and uniform silty substrate, necessary habitat elements required to support fish are not present, despite its connection to Lake Creek. It is possible the creek may provide refugia for juvenile fish during high flows in Lake Creek. Fish presence is not documented in this creek.	
Habitat	The creek is generally channelized at the toe of slope of westbound SR 18. It lacks riffle/pool complexes and channel migration or meanders. Substrates are silty mud. Overhanging coniferous and deciduous trees and shrubs contribute organic matter, small amounts of woody debris, and shade.	
Riparian/Buffer Condition	Riparian vegetation is generally intact on the west side of Stream 2 and consists of mature forested vegetation in W4 dominated by red alder and black cottonwood. A strip of mature trees with a shrubby understory, generally fifty feet wide, buffers the eastern OHWM of Stream 2 from SR 18.	

Table 26. Lake Creek/Stream 3 summary

LAKE CREEK - INFORMATION SUMMARY			
Stream Name		Lake Creek/Stream 3	
		WRIA ID #	07-0393
		Jurisdiction for portion of stream in study area	King County/USFS
		DNR Stream Type	F, perennial
		King County/USFS Buffer Width	165 feet/300 feet
Location of Stream Relative to Project		Lake Creek runs east to west crossing SR 18 through a culvert just south of the I-90/SR 18 interchange. It is a tributary to the Raging River.	
Connectivity (where stream flows from/to)		The perennial flows in Lake Creek drain Echo Lake which lies just south of the eastern project limits. The headwaters of this creek flow through riparian corridors and wetlands including reconnoitered wetlands east of the study area and through W4 (Figure 3; Appendix B). The Creek drains to the Raging River approximately one linear mile west of the western project limits. The Raging River is a tributary to the Snoqualmie River. The confluence of the two rivers is approximately four and a half linear miles downstream and northwest of the project.	
Fish Presence		Lake Creek connects to the Raging River. Lake Creek has documented Coho, Chinook and, steelhead (WDFW 2010). Other resident fish species may also have access to the fish habitat provided by Lake Creek.	
Habitat		Lake Creek generally has a defined channel throughout the study area. Substrate in this area is mainly sand and gravel. Riffle/pool complexes with gravels and cobbles are not present in the portion of the stream in the Project. A scour pool created by the culvert under SR 18 is present within the project area but it is not representative of a riffle/pool complex. Overhanging vegetation contributes organic matter, shade, and woody debris to the creek.	
Riparian/Buffer Condition		Riparian vegetation is generally intact for the entire length of the Lake Creek and consists of mature mixed coniferous and deciduous forest with an understory dominated by native shrubs and herbaceous plants.	

Table 27. Stream 4 summary

STREAM 4 - INFORMATION SUMMARY		
Stream Name	unnamed stream - Stream 4	
	WRIA ID #	07-0393(c)
	Jurisdiction for portion of stream in study area	King County
	DNR Stream Type	assumed type F, seasonal
	Local Jurisdiction Buffer Width	165 feet
Location of Stream Relative to Project	Stream 4 originates in the study area. The southern fork of the creek parallels SR 18 just north of the SE 104 th St and SR 18 intersection. The northern fork begins at a culvert at toe of slope along eastbound SR 18 lanes just before the eastbound I-90 on ramp.	
Connectivity (where stream flows from/to)	The southern fork appears to originate from a high groundwater table. The northern fork receives stormwater from ditches associated with the transportation infrastructure. A culvert delivers stormwater from the west side of SR 18 and the eastbound I-90 off ramp. A ditch along the westbound SR 18 lanes also conveys stormwater to the headwaters of the north fork of the stream. Both forks of the stream converge just east of SR 18 and flow east from that point. They leave the study area through a culvert running east under SE 104 th St and enter a reconnoitered wetland east of SE 104 th St. (Figure 3; Appendix B). It is assumed that this is a seasonal stream with water flowing to Lake Creek through the reconnoitered wetland east of SE 104 th St.	
Fish Presence	It is unknown if the culvert under SE 104 th St is fish passable. It is small and appeared to be partially blocked and clogged, however the stream does provide habitat suitable for fish when seasonal flows are present and had seasonal surface connection with Lake Creek.	
Habitat	The creek is generally channelized and lacks riffle/pool complexes and channel migration or meanders. Substrates are silty mud with some small gravels. Overhanging coniferous and deciduous trees and shrubs contribute organic matter, small amounts of woody debris, and shade.	
Riparian/Buffer Condition	Riparian vegetation is generally intact surrounding Stream 4 with the intersection of SR 18 and SE 104 th St. Buffer vegetation consists of mature forested vegetation dominated by red alder and black cottonwood, Douglas fir, and western red cedar with an understory of salmonberry and sword fern.	

Table 28. Stream 5 summary

Stream 5 - INFORMATION SUMMARY	
Stream Name	unnamed stream - Stream 5
	WRIA ID #
	07-0393(d)
	Jurisdiction for portion of stream in study area
	King County
	DNR Stream Type
	assumed type F, seasonal
	Local Jurisdiction Buffer Width
	165 feet
Location of Stream Relative to Project	<p>Stream 5 originates from a few sources within the study area. Stormwater running off westbound I-90 lanes and on and off ramps, flows through ditches, culverts and a stormwater pond, then outfalls at the headwaters of this creek. This outfall is just south of the eastbound I-90 on ramp from eastbound SR 18. A second hydrologic input at the headwaters of Stream 5 is the ditch flowing through and between the northern portions of Wetlands 9 through W12 along the ROW fence.</p> <p>Stream 5 then parallels SE 104th St before flowing through a culvert and into a reconnoitered wetland east of the project.</p>
Connectivity (where stream flows from/to)	<p>Stream 5 originates at an outfall conveying stormwater south of eastbound I-90 on ramp. Water then flows through a short section of forest and then through a roadside ditch along SE 104th St. Flows from the lowest/ditched portions of Wetlands 10 and W11 flow west through a ditch along SE 104th St., emptying into Stream 5 just before it passes through a culvert under SE 104th St. The creek then flows into a reconnoitered wetland south of the project eventually converging with Lake Creek (Figure 3; Appendix B).</p>
Fish Presence	<p>The culvert under SE 104th St appears to be impassable by fish. It is small and appears to have a relatively steep gradient. The creek is flashy and is often dry and then quickly swells to occasional high flows during and following precipitation events. The ditched nature of the channel does not likely provide fish habitat. However, due to its connection to Lake Creek, fish presence is assumed.</p>
Habitat	<p>The creek is generally a channelized ditch at the toe of slope of SE 104th St. It lacks riffle/pool complexes and channel migration or meanders. Substrates are silty mud.</p> <p>Overhanging coniferous and deciduous trees and shrubs contribute organic matter, small amounts of woody debris, and shade on the north side of the creek.</p>
Riparian/Buffer Condition	<p>Riparian vegetation is generally intact on the north side of Stream 5 and through the short forested upstream section of the creek and consists of mature forested vegetation by mixed coniferous and deciduous forest with and understory of salal and salmonberry. Overhanging riparian vegetation on the north side contributes organic matter. The south side does not have a functioning or regulated buffer. It is a mowed and maintained strip of road ROW along SE 104th St.</p>

4.5. Species and Habitats of Interest

Three federally listed fish species could occur in the study area (Table 26). Puget Sound Chinook evolutionarily significant unit (ESU) and Puget Sound steelhead distinct population segment (DPS) have been documented in the study area in Lake Creek (WDFW 2012a). Coastal-Puget Sound DPS bull trout have not been documented in the study area, but are known to occur in the Snoqualmie River watershed. Designated critical habitat is not known to occur in the study area.

Table 29. Federally listed species within the project.

Common name	Scientific Name	Federal Endangered Species Act Status ^a
Puget Sound Chinook salmon ESU	<i>Oncorhynchus tshawytscha</i>	Threatened
Puget Sound steelhead DPS	<i>Oncorhynchus mykiss</i>	Threatened
Coastal-Puget Sound bull trout DPS	<i>Salvelinus confluentus</i>	Threatened

^a(USFWS 2012 and NMFS 2012)

Western toad (*Anaxyrus boreas*), a federal species of concern and Washington State candidate species are documented beyond the study area in Echo Lake (WDFW 2012c and WDFW 2012d).

The WDFW Priority Habitats and Species (PHS) show Green/Cedar River winter elk range is documented within the southeast quadrant of the Project and that wetlands are present adjacent to and near the study area (WDFW 2012b).

Threatened or endangered plants are not known to occur within the study area (WNHP 2012).

A separate Biological Assessment will be prepared to document potential impacts to federally listed species and designated and proposed critical habitat.

None of the wetlands in the project occur in a section, township, and range identified by WDNR Natural Heritage Program to contain Natural Heritage Features associated with wetlands (WNHP 2012), however Wetland 1 and W4 are mature forested wetlands according to the Washington State Wetland Rating System for Western Washington - Revised (Hruby 2006) (Appendix D).

5. Limitations

The wetland and stream delineations were performed in compliance with accepted standards for professional wetland biologists and applicable federal, state, and local ordinances. This wetland and stream assessment report documents the investigation, best professional judgment, and conclusions of WSDOT based on the circumstances and site conditions encountered at the time of this study.

The information contained in this report is correct and complete to the best of our knowledge. It should be considered a Preliminary Jurisdictional Determination of wetlands and other waters until it has been reviewed and approved in writing by the appropriate jurisdictional authorities. The final determination of the wetland and stream boundary, classification, and required setback and buffer will be made by local, state, and federal jurisdictions.

Appendix A. Background Information

This Appendix includes the following sub-appendices:

- A-1 Property Ownership Within and Adjacent to the Project
- A-2 Monthly Precipitation Data for Landsburg and Maple Valley, Washington
- A-3 Daily Precipitation for 10 Days Preceding Fieldwork, Landsburg and Maple Valley, Washington
- A-4 USGS Topographic Map
- A-5 NRCS Soil Map
- A-6 National Wetland Inventory Map
- A-7 Plant Species Observed On or Near the Project Site

Appendix A-1. Property Ownership Within and Adjacent to the Project

Appendix A-2. Comparison of Observed and Normal Precipitation

The Landsburg, Washington WA4486 WETS station location was selected to determine if normal precipitation conditions were present prior to field work because it is the WETS station with the most similar geomorphic characteristics to the Project and with the necessary available data. The Landsburg, Washington WETS station is at 540 foot elevation and roughly 17 miles inland from Puget Sound. The project just south of the City of Snoqualmie lies at approximately 850 foot elevation and 22 miles inland. The WETS Station is approximately 8 ½ miles south of the project.

For October 31, 2011 field work - Monthly precipitation data for Landsburg, Washington.

		Long-term rainfall records ^a			Rain fall ^b	Condition dry, wet, normal ^c	Condition Value	Month weight value	Product of previous two columns
		3 yrs. in 10 less than	Average	3 yrs. in 10 more than					
1 st prior month	Oct	2.95	4.79	5.73	6.81	W	3	3	6
2 nd prior month	Sept	1.08	2.70	3.28	2.00	N	2	2	4
3 rd prior month	Aug	0.89	1.63	1.98	0.64	D	1	1	1
								Sum	11

^a NRCS 2002

^b NOAA 2012

^c Conditions are considered normal if they fall within the low and high range around the average.

Note: If sum is

6 - 9 then prior period has been
drier than normal
10 - 14 then period has been
normal
15 - 18 then period has been
wetter than normal

Condition value:

Dry (D) =1
Normal (N) =2
Wet (W) =3

Conclusion: Normal precipitation conditions were present prior to the October 31, 2011 field work.

Information presented here based on methods described in Chapter 19 in *Engineering Field Handbook* (NRCS1997).

For September 18, 2012 field work - Monthly precipitation data for Landsburg, Washington.

wetter than normal

Condition value:

Dry (D) =1

Normal (N) =2

Wet (W) =3

Conclusion: Drier than normal precipitation conditions were present prior to the September 24, October 1, and October 3, 2012 field work.

Information presented here based on methods described in Chapter 19 in *Engineering Field Handbook* (NRCS1997).

Data from the last two field visits on October 22, 2012 and November 19, 2012 was not yet available for the Landsburg, Washington WA4486 WETS station location at the time this report was written. Weather data for these two site visits was taken from the Lake Wilderness, Maple Valley, Washington Weather Underground Station KWAMAPLE28. This weather station is the nearest station to the Landsburg, Washington WA4486 WETS station with available data for these site visits.

For October 22, 2012 and November 19, 2012 field work - Monthly precipitation data for Maple Valley, Washington.

		Long-term rainfall records ^a			Rain fall ^b	Condition dry, wet, normal ^c	Condition Value	Month weight value	Product of previous two columns

Appendix A-4. USGS Topographic Map

Appendix A-5. DNR Forest Land Soils Map

Appendix A-6. USFWS National Wetland Inventory Map

Appendix A-7. Plant Species Observed In The Study Area

The below table is not a complete list of plants occurring in the study area but rather a list of observed plants from September 2012 through early November 2012 when the most recent wetland and stream field work was completed. Since the majority of the field work was done towards the end of the growing season, there are likely many more plants occurring in the study area that were not present during field work.

Scientific Name	Common Name	Wetland Indicator Status ^a
<i>Acer circinatum</i>	vine maple	FAC
<i>Acer macrophyllum</i>	bigleaf maple	FACU
<i>Agrostis capillaris</i>	colonial bentgrass	FAC
<i>Agrostis exarata</i>	spike bentgrass	FACW
<i>Alnus rubra</i>	red alder	FAC
<i>Alopecurus pratensis</i>	meadow foxtail	FAC
<i>Athyrium filix-femina</i>	common ladyfern	FAC
<i>Blechnum spicant</i>	deer fern	FAC
<i>Cardamine oligosperma</i>	little western bittercress	FAC
<i>Carex obnupta</i>	slough sedge	OBL
<i>Carex ovalis</i>	eggbract sedge	FACW
<i>Carex spp.</i>	sedges	-
<i>Carex stipata</i>	sawbeak sedge	OBL
<i>Scirpus microcarpus</i>	small-fruited bulrush	OBL
<i>Cirsium arvense</i>	Canada thistle	FAC
<i>Cornus alba</i>	redosier dogwood	FACW
<i>Cytisus scoparius</i>	Scotch broom	UPL
<i>Dactylis glomerata</i>	orchard grass	FACU
<i>Dryopteris expansa</i>	spreading wood fern	FACW
<i>Elymus repens</i>	quackgrass	FAC
<i>Epilobium ciliatum</i>	fringed willowherb	FACW
<i>Equisetum arvense</i>	field horsetail	FAC
<i>Equisetum hyemale</i>	scouringrush horsetail	FACW
<i>Equisetum telmateia</i>	giant horsetail	FACW
<i>Fallopia japonica</i>	Japanese knotweed	FACU
<i>Festuca rubra</i>	red fescue	FAC
<i>Frangula purshiana</i>	Cascara buckthorn	FAC
<i>Gaultheria shallon</i>	salal	FACU
<i>Geranium molle</i>	dovefoot geranium	UPL

<i>Geranium robertianum</i>	Robert geranium	UPL
<i>Geum macrophyllum</i>	<i>largeleaf avens</i>	FACW
<i>Ilex aquifolium</i>	<i>English holly</i>	NL
<i>Juncus acuminatus</i>	tapertip rush	OBL
<i>Juncus articulatus</i>	Joint-Leaf Rush	OBL
<i>Juncus effusus</i>	soft rush	FACW
<i>Holcus lanatus</i>	common velvetgrass	FAC
<i>Hypericum perforatum</i>	common St. Johnswort	FACU
<i>Hypochaeris radicata</i>	hairy cat's ear	FACU
<i>Juncus effusus</i>	soft rush	FACW
<i>Lonicera involucrata</i>	twinberry honeysuckle	FAC
<i>Lysichiton americanus</i>	American skunkcabbage	OBL
<i>Mahonia aquifolium</i>	tall oregongrape	FACU
<i>Maianthemum dilatatum</i>	false lily-of-the-valley	FAC
<i>Malus fusca</i>	Pacific crabapple	FACW
<i>Oenanthe sarmentosa</i>	water parsley	OBL
<i>oplopanax horridus</i>	devil's club	FAC
<i>Phalaris arundinacea</i>	reed canarygrass	FACW

<i>Solidago Canadensis</i>	Canadian Goldenrod	FACU
<i>Spiraea douglasii</i>	hardhack	FACW
<i>Tanacetum vulgare</i>	common tansy	FACU
<i>Thuja plicata</i>	western red cedar	FAC
<i>Tolmiea menziesii</i>	youth on age	FAC
<i>Trillium ovatum</i>	Pacific trillium	UPL
<i>Tsuga heterophylla</i>	western hemlock	FACU
<i>Typha latifolia</i>	broadleaf cattail	OBL
<i>Vaccinium parvifolium</i>	red huckleberry	FACU
<i>Verbascum thapsus</i>	common mullein	FACU
<i>Veronica americana</i>	American speedwell	OBL
<i>Vicia americana</i>	American vetch	FAC

^a(Lichvar and Kartesz 2012):

OBL = Almost always occur in wetlands

FACW = Usually occur in wetlands, but may occur in non-wetlands

FAC = Occur in wetlands or non-wetlands

FACU = Usually occur in non-wetlands, but may occur in wetlands

UPL = Almost never occur in wetlands.

If the plant is not listed on the National Wetland Plant List (Lichvar 2012) and it does not occur on the list in and adjacent region the plant is assumed to be UPL.

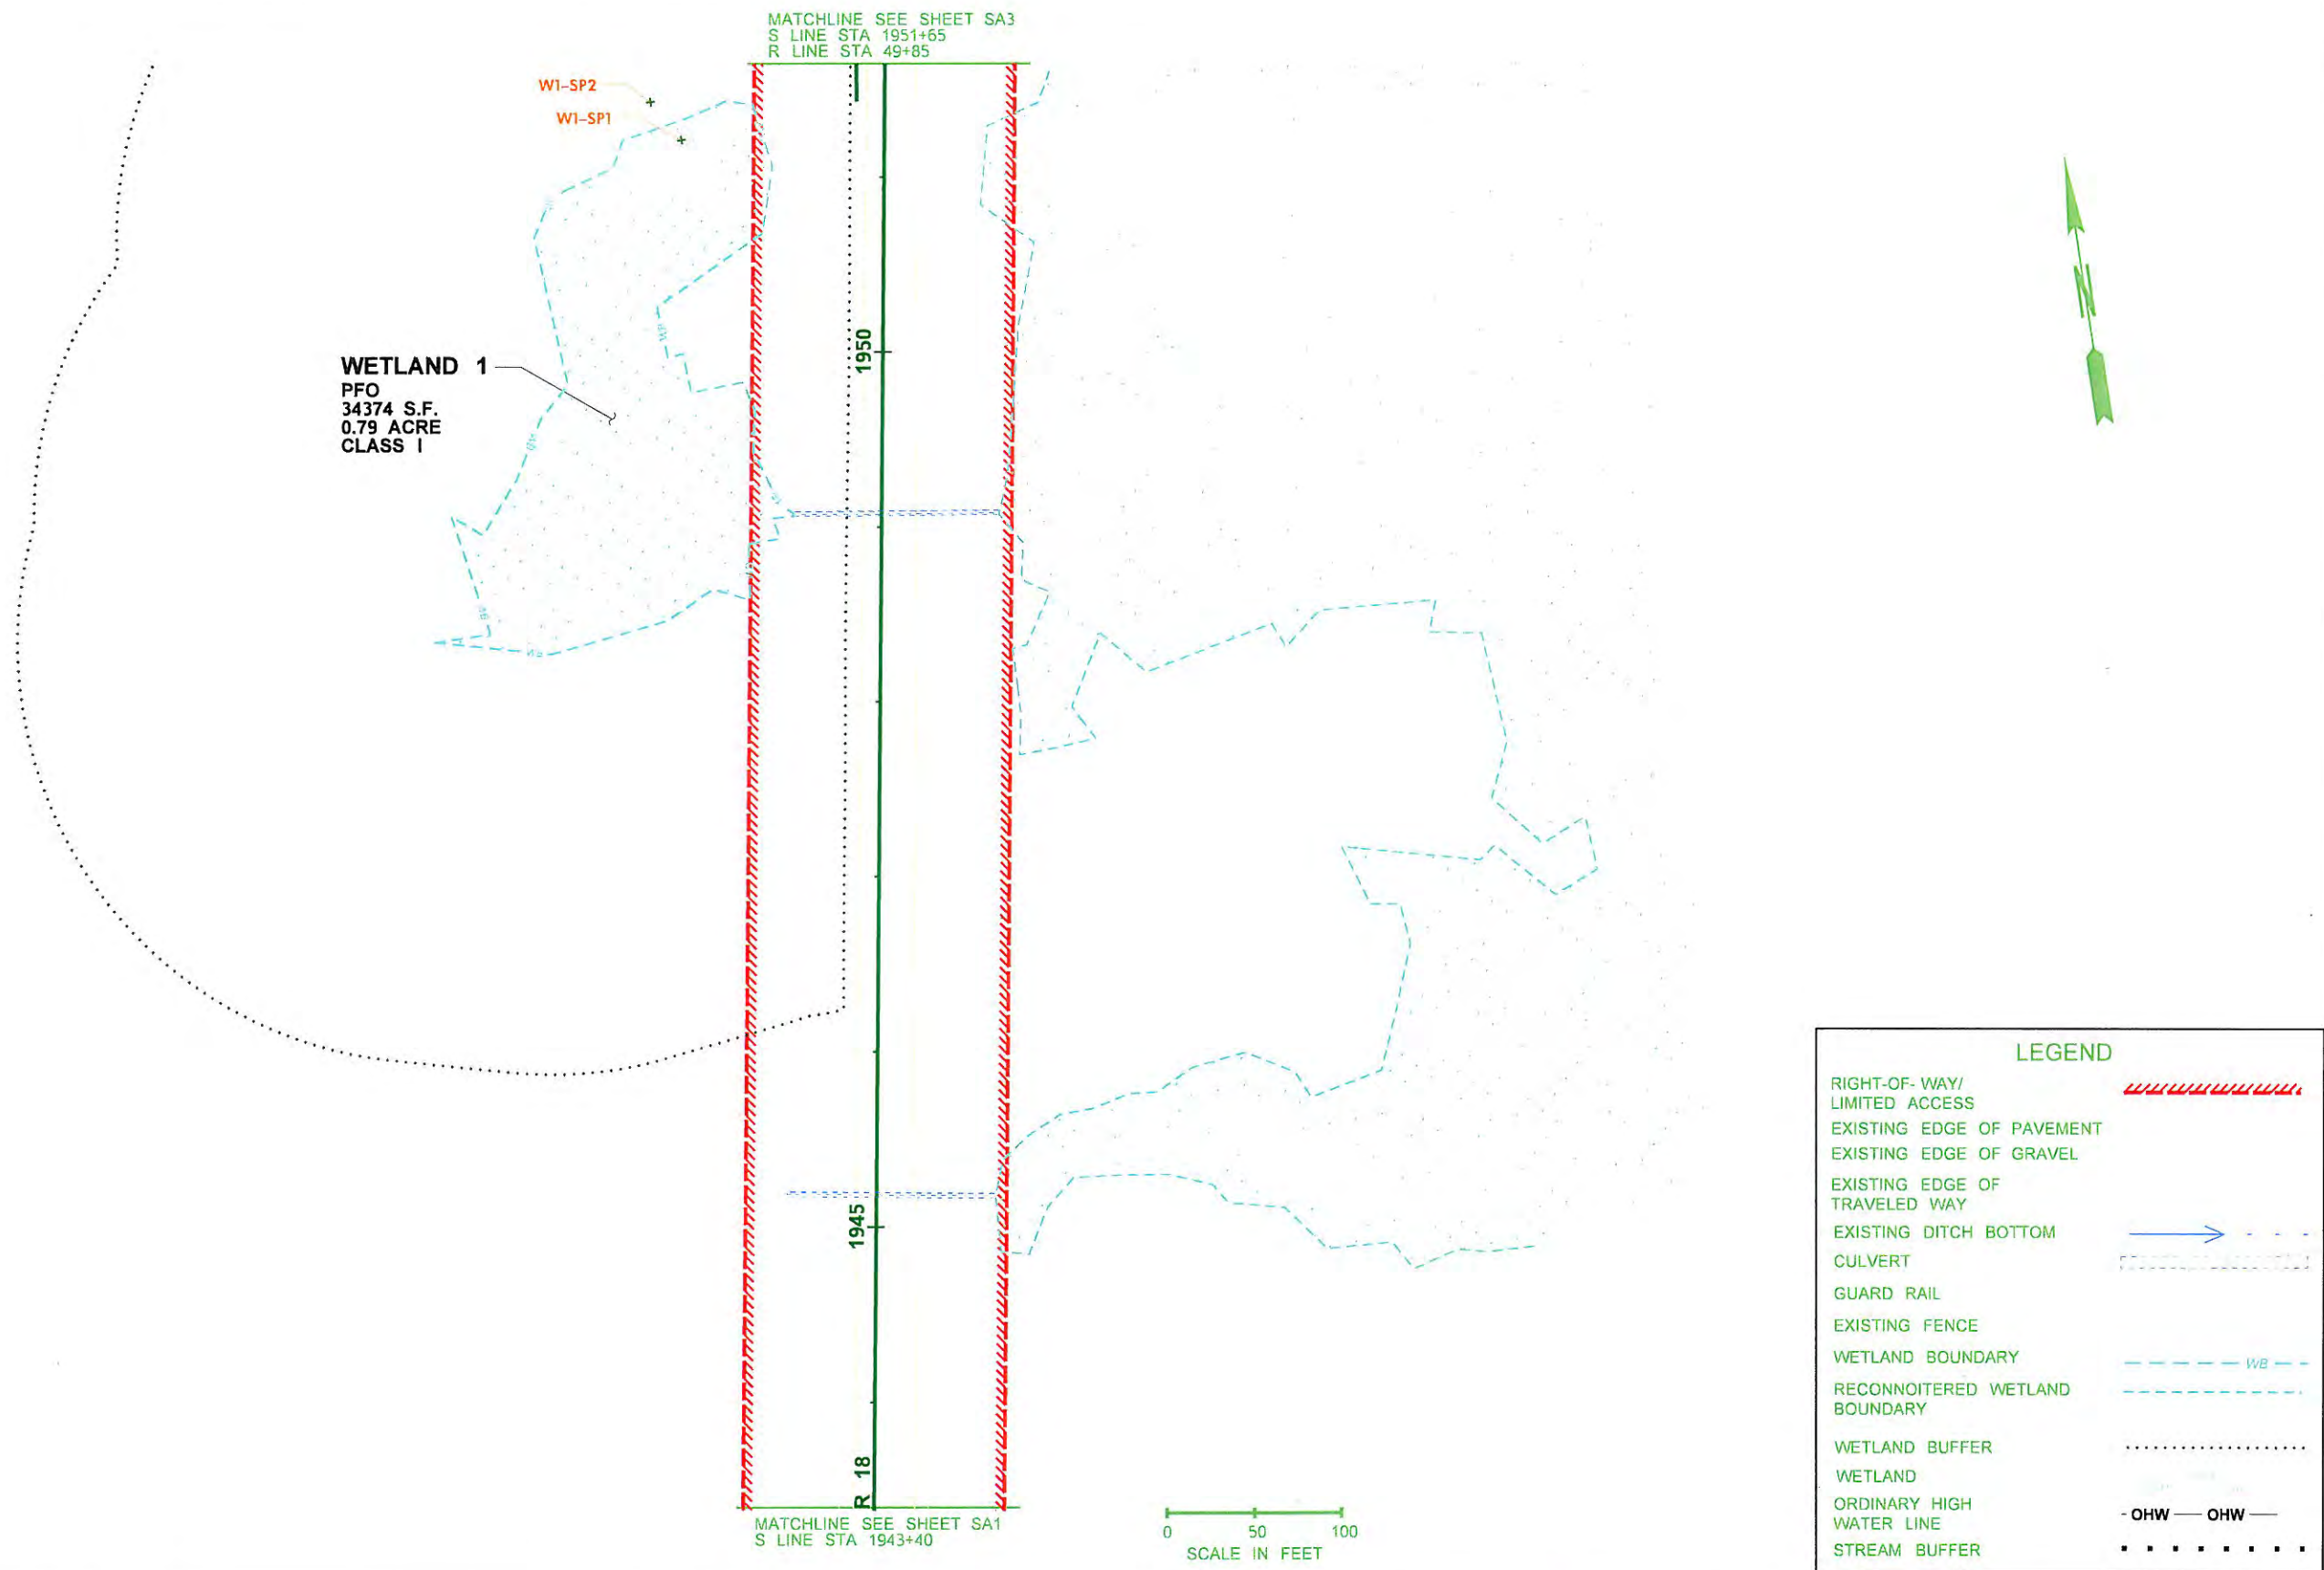

Appendix B. Plan Sheets

Plan sheets showing

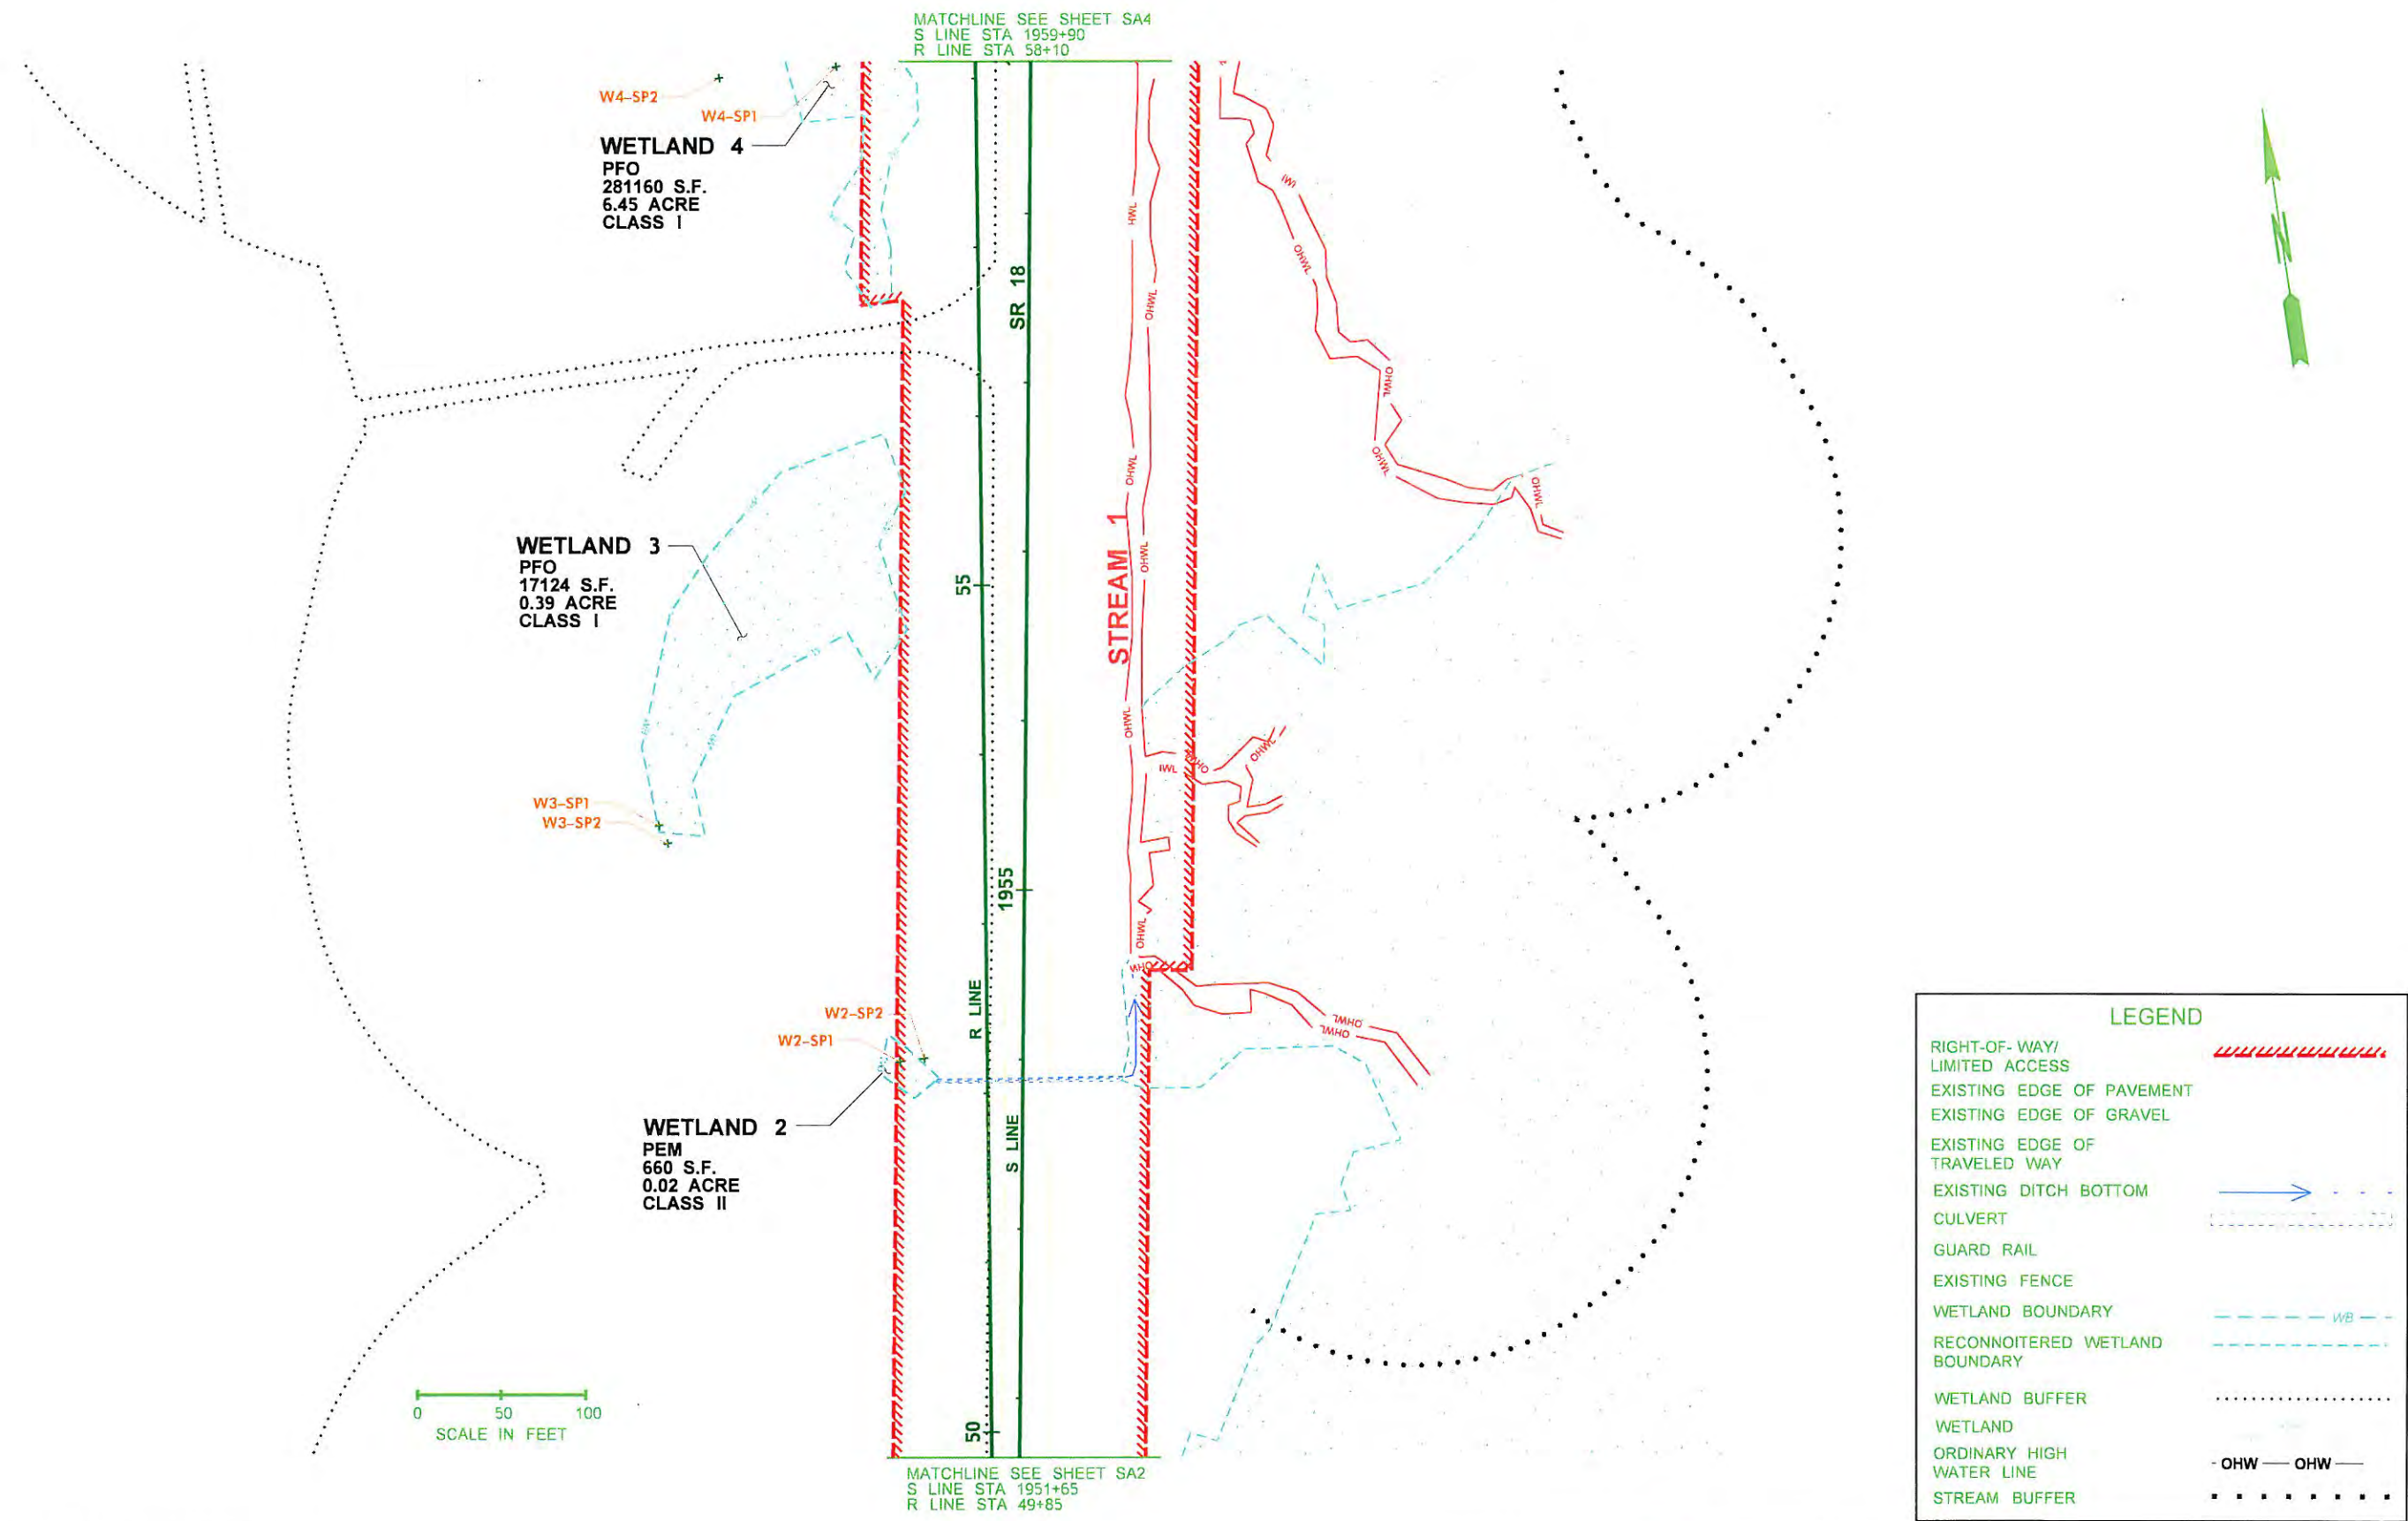

- wetland name
- wetland boundaries
- sampling point locations
- wetland area
- wetland category
- King County wetland buffers (W4 and W9 occur on USFS land. Refer to Table 1 for USFS buffers)
- reconnoitered wetland boundaries
- stream name
- stream OHWM
- stream water type
- King County stream buffers (Streams 1, 2, and Lake Creek/3 have portions on USFS land. Refer to Table 23 for USFS buffers)
- culverts

In some locations, wetlands and/or their buffers overlap with stream buffers. When this occurs the buffer is shown as:

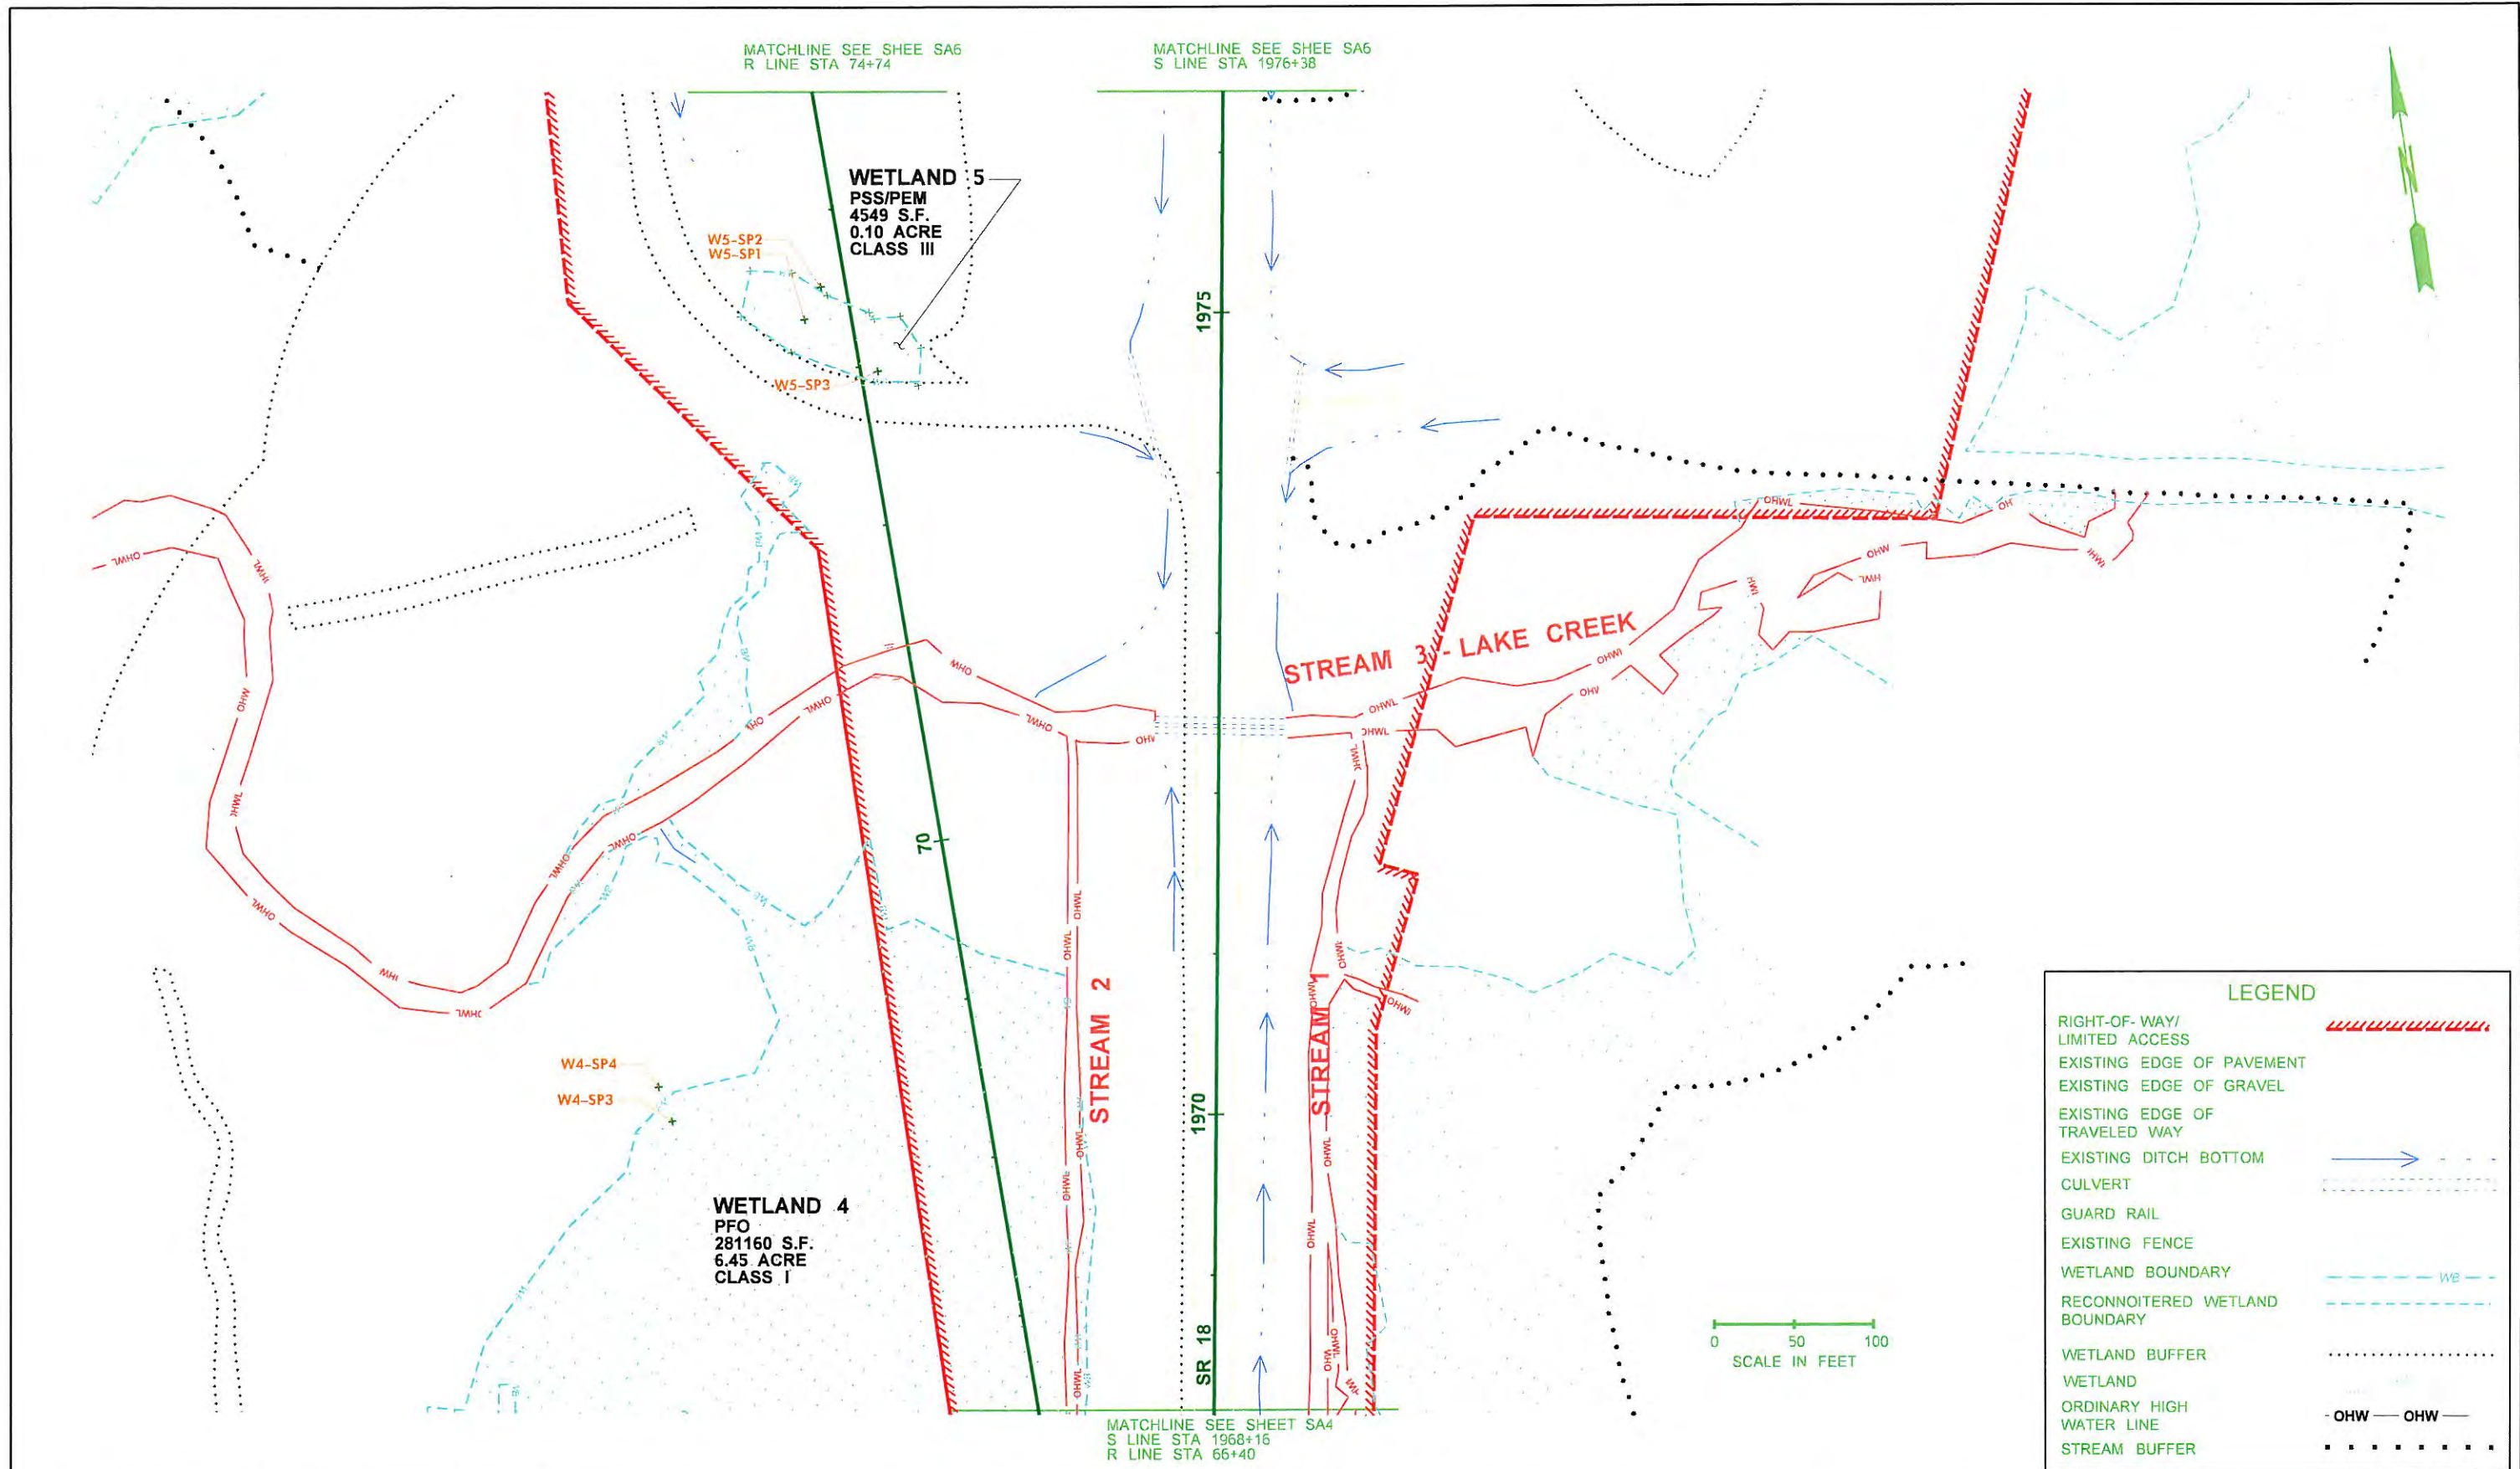

- wetland buffer, when wetland and stream buffers overlap, or
- where stream buffers overlap wetlands, the area is identified as wetland (not as stream buffer overlapping the wetland)

Appendix C. Wetland Delineation Data Sheets

Wetland polygons shown in Figure 3 and Appendix B. Instrument-surveyed wetland boundaries and sampling point locations shown in Appendix B.

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: I-90/SR 18 Interchange - Westbound Flyover Ramp City/County: /King Sampling Date: 10/31/2011
 Applicant/Owner: Washington State Department of Transportation State: WA Sampling Point: W1-SP1
 Investigator(s): D. Littauer, A. Gross Section, Township, Range: S11, T23N, R7E
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): concave Slope (%): 5
 Subregion (LRR): A Lat: 47.498 Long: -121.886 Datum: NAD 83 Harn
 Soil Map Unit Name: Tokul gravelly loam, 15 to 30 percent slopes NWI classification: PFO
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
Remarks:			

VEGETATION – Use scientific names of plants

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: I-90/SR 18 Interchange - Westbound Flyover Ramp City/County: /King Sampling Date: 10/31/2011
 Applicant/Owner: Washington State Department of Transportation State: WA Sampling Point: W3-SP1
 Investigator(s): D. Littauer, A. Gross Section, Township, Range: S11, T23N, R7E
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): concave Slope (%): 5
 Subregion (LRR): A Lat: 47.5 Long: -121.886 Datum: NAD 83 Harn
 Soil Map Unit Name: Tokol gravelly loam, 15 to 30 percent slopes NWI classification: PFO
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐, Soil ☐, or Hydrology ☒, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Hydric Soil Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
Wetland Hydrology Present?	Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>		
Remarks: The naturally problematic box for hydrology is checked because wetland hydrology indicators were not present during time of fieldwork, but are likely present during the early part of the growing season. Due to the presence of the other two factors, the landscape position, topography, and the field work occurring at the end of the growing season, wetland hydrology is assumed present.			

VEGETATION – Use scientific names of plants

Field Observations:Surface Water Present? Yes ☐ No ☒ Depth (inches): _____Water Table Present? Yes ☐ No ☒ Depth (inches): _____Saturation Present? (includes capillary fringe) Yes ☐ No ☒ Depth (inches): _____**Wetland Hydrology Present?** Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Late growing season conditions present. Wetland hydrology indicators are not present at this time but are assumed to be present during the early growing season. Due to the presence of the other two factors, the landscape position, topography, and the field work occurring at the end of the growing season, wetland hydrology is assumed present. So the yes box is checked for wetland hydrology even though indicators were not observable at this late date in the growing season.

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: I-90/SR 18 Interchange - Westbound Flyover Ramp City/County: /King Sampling Date: 10/31/2011
 Applicant/Owner: Washington State Department of Transportation State: WA Sampling Point: W3-SP2
 Investigator(s): D. Littauer, A. Gross Section, Township, Range: S11, T23N, R7E
 Landform (hillslope, terrace, etc.): hillslope Local relief (concave, convex, none): concave Slope (%): 10
 Subregion (LRR): A Lat: 47.5 Long: -121.886 Datum: NAD 83 Harn
 Soil Map Unit Name: Tokol gravelly loam, 15 to 30 percent slopes NWI classification: upland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

WETLAND DETERMINATION DATA FORM – Western Mountains, Valleys, and Coast Region

Project Site: I-90/SR 18 Interchange - Westbound Flyover Ramp City/County: /King Sampling Date: 10/31/2011
 Applicant/Owner: Washington State Department of Transportation State: WA Sampling Point: W4-SP2
 Investigator(s): Tatiana Dreisbach, Brian Bigler Section, Township, Range: S2, T23N, R7E
 Landform (hillslope, terrace, etc.): slope Local relief (concave, convex, none): concave Slope (%): 10
 Subregion (LRR): A Lat: 47.504 Long: -121.886 Datum: NAD 83 HARN
 Soil Map Unit Name: Tokol gravelly loam, 15 to 30 percent slopes NWI classification: upland
 Are climatic / hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐, Soil ☐, or Hydrology ☐, naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>		
Wetland Hydrology Present?	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>

Remarks:

WETLAND DETERMINATION DATA FORM - Western Mountains, Valleys, and Coast Region

Project/Site: SR 18/I-90 Interchange - Westbound Flyover Ramp City/County: King Sampling Date: 22-Oct-12
 Applicant/Owner: WSDOT State: WA Sampling Point: w5-sp1
 Investigator(s): Tatiana Dreisbach/Beth Toberer Section, Township, Range: S 2 T 23N R 7E
 Landform (hillslope, terrace, etc.): depression Local relief (concave, convex, none): concave Slope: 5.0 % / 2.9 °
 Subregion (LRR): LRR A Lat.: 47.505 Long.: -121.886 Datum: NAD83HARN
 Soil Map Unit Name: Tokul gravelly loam, 15% to 30% slopes NWI classification: PSS

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☒ , Soil ☒ , or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☐ naturally problematic? (If needed, explain any answers in Remarks.)

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Remarks: This wetland area is forming in excavated/disturbed WSDOT maintenance yard. Soils have been excavated and vegetation cleared and these factors are considered significantly disturbed. Excavation of soils may have inadvertently resulted in the establishment of this newly forming wetland. It is adjacent to W4. It may have been excavated in upland or maybe historic wetland given close proximity to W4.	

VEGETATION - Use scientific names of plants.

% Bare Ground in Herb Stratum: <u>76</u>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on both the Carex species and Salix species were not present and therefore the plants were not identifiable to species. Given that all of the species in this location except one are wetland species and that the soils and hydrology meet wetland criteria, the Carex and Salix species are likely a wetland species. The Salix species is not a dominant so its indicator status does not affect the dominance test calculation. The Carex species is included in the dominance calculation as a FAC or wetter plant. If the Carex was counted as an upland plant, the dominance test would still be met.

Indicators for Problematic Hydric Soils³:

- ☐ 2 cm Muck (A10)
- ☐ Red Parent Material (TF2)
- ☒ Other (Explain in Remarks)

³Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes ☒ No ☐

Remarks: This wetland is in a disturbed area on a WSDOT maintenance yard. The area appears to have been relatively recently excavated and is a newly forming wetland. Soils are bright and don't meet an indicator, however, they are still hydric soils and this is why the "other" box is checked. Soils meet the definition of hydric soils: ponding and saturation for long periods during the growing season. The presence of wetland hydrology and a hydrophytic plant community also indicate that the soils are wetland soils.

Hydrology

Describe Recorded Data (stream gauge, monitor well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM - Western Mountains, Valleys, and Coast Region

Project/Site: SR 18/I-90 Interchange - Westbound Flyover Ramp City/County: King Sampling Date: 22-Oct-12
 Applicant/Owner: WSDOT State: WA Sampling Point: w6-sp1
 Investigator(s): Tatiana Dreisbach/Beth Toberer Section, Township, Range: S 2 T 23N R 7E
 Landform (hillslope, terrace, etc.): Undulating Local relief (concave, convex, none): undulating Slope: 5.0 % / 2.9 °
 Subregion (LRR): LRR A Lat.: 47.505 Long.: -121.884 Datum: NAD83HARN
 Soil Map Unit Name: Tokul gravelly loam, 15% to 30% slopes NWI classification: PSS

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ☒ No ☐ (If no, explain in Remarks.)
 Are Vegetation ☒ , Soil ☒ , or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☐ naturally problematic? (If needed, explain any answers in Remarks.)

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Remarks: Soil pit in middle of old abandon gravel driveway circle. Wetland appears to have formed on disturbed/compacted soils. Hydrology mainly driven by precipitation and run-on which perches on the compacted soils. Vegetation recetnly cleared andvolunteer saplings appear to be five to ten years old.	

VEGETATION - Use scientific names of plants.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on the Carex species was not present and therefore the plant was not identifiable to species. Given that all except one of the species in this location are wetland species and that the soils and hydrology meet wetland criteria, the Carex species is likely a wetland species. The Carex species is included as a FAC or wetter species in the dominance test calculation. If it were excluded from the dominance calculation it would not be met but the prevalence index would still be met if the Carex species is counted as a FAC plant.

Surface Water Present? Yes ☐ No ☒

Water Table Present? Yes ☒ No ☐

Saturation Present?
(includes capillary fringe) Yes ☒ No ☐

Depth (inches):

Depth (inches):

Depth (inches):

Wetland Hydrology Present? Yes ☐ No ☒

Remarks:

Direct observations of water are not representative of wetland hydrology. Heavy rains in past 24 hrs. Due to landscape position, upland vegetation, and upland soils this area is assumed to not have wetland hydrology present, despite the presence of water in the upland plot during heavy precipitation event.

WETLAND DETERMINATION DATA FORM - Western Mountains, Valleys, and Coast Region

 Subregion (LRR): LRR A Lat.: 47.508 Long.: -121.879 Datum: NAD83HARN
 Soil Map Unit Name: Tokul gravelly loam, 15% to 30% slopes NWI classification: PFO

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ☐ No ☒ (If no, explain in Remarks.)
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Remarks: Drier than normal precipitation conditions were present prior to the October 3, 2012 field work (Appendix A-1), indicating hydrology is naturally problematic during this field visit. Wetland hydrology is assumed to be present during periods with normal precipitation. Wetland formed on top of restricted soil layer of that perches water during the growing season.	

VEGETATION - Use scientific names of plants.

Field Observations:

Surface Water Present? Yes ☐ No ☒Depth (inches): Water Table Present? Yes ☐ No ☒Depth (inches): Saturation Present? (includes capillary fringe) Yes ☐ No ☒Depth (inches): Wetland Hydrology Present? Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitor well, aerial photos, previous inspections), if available:

Remarks:

Drier than normal precipitation conditions were present prior to the October 3, 2012 field work (Appendix A-1). Wetland hydrology is presumed present during periods with normal precipitation in this location given the vegetation community dominated by hydrophytic plants and the presence of hydric soils. Precipitation likely driven by precipitation and run-on which perches on the restrictive layer. Wetland is in MLRA 2 so water-stained leaves are a secondary indicator.

Describe Recorded Data (stream gauge, monitor well, aerial photos, previous inspections), if available:

Remarks:

Drier than normal precipitation conditions were present prior to the October 3, 2012 field work (Appendix A-1). Wetland hydrology is presumed present during periods with normal precipitation in this location given the vegetation community dominated by hydrophytic plants and the presence of hydric soils and surface soil cracks. Precipitation likely driven by precipitation and run-on which perches on the restrictive layer. Wetland is in MLRA 2 so water-stained leaves are a secondary indicator.

% Bare Ground in Herb Stratum: <u>63</u>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on the Carex species was not present and therefore the plant was not identifiable to species. Given that all of the species in this location are wetland species and that the soils and hydrology meet wetland criteria, the Carex species is likely a wetland species. The Carex species is not a dominant so its indicator status does not affect the dominance test calculation.

- ☐ Saturation Visible on Aerial Imagery (C9)
- ☐ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-neutral Test (D5)
- ☐ Raised Ant Mounds (D6) (LRR A)
- ☐ Frost Heave Hummocks (D7)

Field Observations:

Surface Water Present? Yes ☐ No ☒

Depth (inches):

Water Table Present? Yes ☐ No ☒

Depth (inches):

Saturation Present? (includes capillary fringe) Yes ☒ No ☐

Depth (inches):

Wetland Hydrology Present? Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitor well, aerial photos, previous inspections), if available:

Remarks:

Standing water to 6 inches in depression approximately 10 feet east of sample point. Wetland is in MLRA 2 so water-stained leaves are a secondary indicator.

2. _____	<u>0</u>	<input type="checkbox"/> 0.0%	_____	% Bare Ground in Herb Stratum: <u>39</u>
= Total Cover <u>0</u>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on the Carex species was not present and therefore the plant was not identifiable to species. Given that all but one of the species in this location are wetland species and that the soils and hydrology meet wetland criteria, the Carex species is likely a wetland species. The Carex species is not a dominant so its indicator status does not affect the dominance test calculation.				

Soil

Sampling Point: w14-sp3

 Soil Map Unit Name: Tokul gravelly loam, 15% to 30% slopes NWI classification: PSS

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ☐ No ☒ (If no, explain in Remarks.)
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="radio"/> No <input type="radio"/>
Hydric Soil Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Wetland Hydrology Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	
Remarks: Drier than normal precipitation conditions were present prior to the September 24, 2012 field work (Appendix A-1), indicating hydrology is naturally problematic during this field visit.	

VEGETATION - Use scientific names of plants.

% Bare Ground in Herb Stratum: <u>40</u>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on the Carex species was not present and therefore the plant was not identifiable to species. Given that all of the species in this location are wetland species and that the soils and hydrology meet wetland criteria, the Carex species is likely a wetland species. The Carex species is not a dominant so its indicator status does not affect the dominance test calculation.				

Sampling Point: w15-sp1

Hydrology

Primary Indicators (minimum of one required; check all that apply)

Secondary Indicators (minimum of two required)

- ☒ Water-Stained Leaves (B9) (MLRA 1, 2, 4A, and 4B)
- ☐ Drainage Patterns (B10)
- ☐ Dry Season Water Table (C2)
- ☐ Saturation Visible on Aerial Imagery (C9)
- ☒ Geomorphic Position (D2)
- ☐ Shallow Aquitard (D3)
- ☒ FAC-neutral Test (D5)
- ☐ Raised Ant Mounds (D6) (LRR A)
- ☐ Frost Heave Hummocks (D7)

Surface Water Present? Yes ☐ No ☒

Water Table Present? Yes ☐ No ☒

Saturation Present?
(includes capillary fringe) Yes ☐ No ☒

Depth (inches):

Depth (inches):

Depth (inches):

Wetland Hydrology Present? Yes ☒ No ☐

Describe Recorded Data (stream gauge, monitor well, aerial photos, previous inspections), if available:

Though drier than normal conditions were present during the time of the field visit, and direct observation of water was not present, other wetland hydrology indicators were present indicating wetland hydrology is present. Wetland is in MLRA 2 so water-stained leaves are a secondary indicator.

WETLAND DETERMINATION DATA FORM - Western Mountains, Valleys, and Coast Region

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>	Is the Sampled Area within a Wetland? Yes <input type="radio"/> No <input checked="" type="radio"/>
Hydric Soil Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	
Wetland Hydrology Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	
Remarks: Drier than normal precipitation conditions were present prior to the September 24, 2012 field work (Appendix A-1), indicating hydrology is naturally problematic during this field visit. This upland data point is characteristic of some other upland areas in the project which are dominated by <i>Spiraea douglasii</i> . These upland areas at a glance may look like possible wetlands, however they are usually on slopes and do not retain water for long enough periods to support wetland hydrology. They also have upland and FAC species in the understory such as <i>Rubus ursinus</i> and <i>Holcus lanatus</i> and lack hydric soils.	

VEGETATION - Use scientific names of plants.

Hydrophytic Vegetation Present? Yes <input checked="" type="radio"/> No <input type="radio"/>				
Remarks: - in the Indicator Status column indicates the species is unknown. The inflorescence on the Carex species was not present and therefore the plant was not identifiable to species. Given that all of the species in this location are wetland species and that the soils and hydrology meet wetland criteria, the Carex species is likely a wetland species. The Carex species is not a dominant so its indicator status does not affect the dominance test calculation.

Remarks:

Drier than normal precipitation conditions were present prior to the September 24, 2012 field work. Although direct observation of water was not observed other hydrology indicators were still present.

WETLAND DETERMINATION DATA FORM - Western Mountains, Valleys, and Coast Region

Project/Site: SR 18/I-90 Interchange - Westbound Flyover Ramp City/County: King Sampling Date: 24-Sep-12
 Applicant/Owner: WSDOT State: WA Sampling Point: w20-sp2
 Investigator(s): Tatiana Dreisbach/Beth Toberer Section, Township, Range: S 2 T 23N R 7E
 Landform (hillslope, terrace, etc.): slope Local relief (concave, convex, none): concave Slope: 15.0 % / 8.5 °
 Subregion (LRR): LRR A Lat.: 47.511 Long.: -121.869 Datum: NAD83HARN
 Soil Map Unit Name: Tokul gravelly loam, 15% to 30% slopes NWI classification: Upland

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ☐ No ☒ (If no, explain in Remarks.)
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☐ significantly disturbed? Are "Normal Circumstances" present? Yes ☒ No ☐
 Are Vegetation ☐ , Soil ☐ , or Hydrology ☒ naturally problematic? (If needed, explain any answers in Remarks.)

Summary of Findings - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	Is the Sampled Area within a Wetland? Yes <input type="radio"/> No <input checked="" type="radio"/>
Hydric Soil Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	
Wetland Hydrology Present? Yes <input type="radio"/> No <input checked="" type="radio"/>	
Remarks: Drier than normal precipitation conditions were present prior to the September 24, 2012 field work (Appendix A-1), indicating hydrology is naturally problematic during this field visit.	

VEGETATION - Use scientific names of plants.

Appendix D. Wetland Rating Forms

Wetland name or number: 1

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 1 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.79 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☒

II ☐

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 30

Score for Hydrologic Functions 24

Score for Habitat Functions 26

TOTAL score for functions 80

Category based on SPECIAL CHARACTERISTICS of wetland

I ☒

II ☐

Does not Apply ☐

Final Category

(choose the "highest" category from above)

I

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input checked="" type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

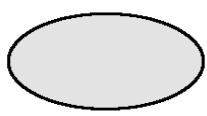

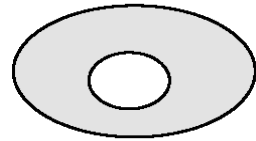

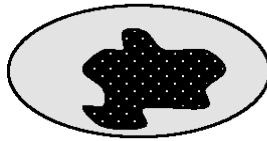

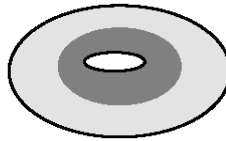

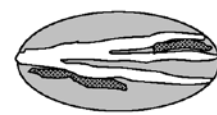

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input checked="" type="checkbox"/> YES Points = 4 <input type="checkbox"/> NO Points = 0	4
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 15
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input checked="" type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 30 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input checked="" type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	5
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input checked="" type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	5
Total for D 3		<i>Add the points in the boxes above</i> 12
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input checked="" type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier
		2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. Add score to table on p. 1 24

<p><i>These questions apply to wetlands of all HGM classes</i></p> <p>HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.</p>			Points
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?		
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). <p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p>None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p style="text-align: center;">High = 3 points [riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<p style="text-align: center;">Points</p> <p style="text-align: center;">2</p>	
<p>H 1.5 <u>Special Habitat Features</u> (<i>see p. 77</i>)</p> <p><i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<p style="text-align: center;">3</p>	
<p style="text-align: center;"><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>		
<p style="text-align: center;">H 1. TOTAL Score - potential for providing habitat Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</p>		<p style="text-align: center;">9</p>
<p>Comments:</p>		

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u> Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	4
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	4
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 8

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input checked="" type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	4

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5

<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		26

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

SC 2.0	Natural Heritage Wetlands (<i>see p. 87</i>) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.	Category
SC 2.1	Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.) S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO	
SC 2.2	Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland	
SC 3.0	Bogs (<i>see p. 87</i>) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input checked="" type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input checked="" type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		I
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

<div>SC 6.0</div> <div>Interdunal Wetlands (<i>see p. 93</i>)</div> <div>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</div> <div><div><input type="checkbox"/> YES - go to SC 6.1</div><div><input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</div></div> <div><i>If you answer YES, you will still need to rate the wetland based on its functions.</i></div> <div>In practical terms, that means the following geographic areas:</div> <div><ul style="list-style-type: none">• Long Beach Peninsula - lands west of SR 103• Grayland-Westport - lands west of SR 105• Ocean Shores-Copalis - lands west of SR 1115 and SR 109.</div> <div>SC 6.1</div> <div>Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</div> <div><div><input type="checkbox"/> YES = Category II</div><div><input type="checkbox"/> NO - go to SC 6.2</div></div> <div>SC 6.2</div> <div>Is the wetland unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</div> <div><input type="checkbox"/> YES = Category III</div>	<div>Category</div> <div></div> <div>I</div>
<div>Category of wetland based on Special Characteristics</div> <div>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</div> <div>If you answered NO for all types, enter "Not Applicable" on p. 1.</div>	

Wetland name or number: 2

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 2 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.02 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☒

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 22

Score for Hydrologic Functions 10

Score for Habitat Functions 24

TOTAL score for functions 56

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

II

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<i>Does the wetland unit have a local significance in addition to its functions?</i> For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 11
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 22 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input checked="" type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	0
Total for D 3		<i>Add the points in the boxes above</i> 5
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input checked="" type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier 2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 10

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u> Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	4
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	4
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 8

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input checked="" type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input checked="" type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	4

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p>H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		17
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		24

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

SC 2.0	Natural Heritage Wetlands (<i>see p. 87</i>) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.	Category
SC 2.1	Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.) S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO	
SC 2.2	Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland	
SC 3.0	Bogs (<i>see p. 87</i>) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p>NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 3

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 3 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.39 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☒

II ☐

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 32

Score for Hydrologic Functions 20

Score for Habitat Functions 24

TOTAL score for functions 76

Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

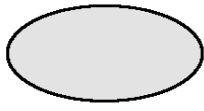

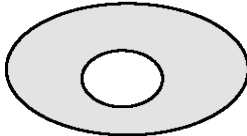

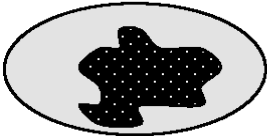

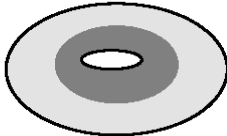

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input checked="" type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	3
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input checked="" type="checkbox"/> YES Points = 4 <input type="checkbox"/> NO Points = 0	4
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 95\%$ of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/2$ of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/10$ of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $< 1/10$ of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is $> 1/2$ total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is $> 1/4$ total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is $< 1/4$ total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 16
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. Add score to table on p. 1 32

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input checked="" type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	4
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 10
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input checked="" type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier
		2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. Add score to table on p. 1 20

<i>These questions apply to wetlands of all HGM classes</i> HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.		
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?	Points
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>) Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</p> <div style="margin-left: 40px;"> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </div> <p><i>If the unit has a forested class, check if:</i></p> <div style="margin-left: 40px;"> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </div> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <div style="margin-left: 40px; text-align: right;"> 4 structures or more Points = 4 3 structures Points = 2 2 structures Points = 1 1 structure Points = 0 </div>	1
Map of Cowardin classes		Figure __
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>) Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</p> <div style="margin-left: 40px;"> <input type="checkbox"/> Permanently flooded or inundated 4 or more types present Points = 3 <input checked="" type="checkbox"/> Seasonally flooded or inundated 3 types present Points = 2 <input type="checkbox"/> Occasionally flooded or inundated 2 types present Points = 1 <input checked="" type="checkbox"/> Saturated only 1 type present Points = 0 <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </div>	1
Map of hydroperiods		Figure __
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>) Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</p> <div style="margin-left: 40px; text-align: right;"> <p><i>If you counted:</i></p> >19 species Points = 2 5-19 species Points = 1 <5 species Points = 0</div> <p><i>List species below if you want to:</i></p>	1

<p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersions between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p style="text-align: center;">None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p style="text-align: center;">High = 3 points</p> <p>[riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<table border="1"> <tr> <th style="background-color: #cccccc;">Points</th> </tr> <tr> <td style="text-align: center; vertical-align: middle;">2</td> </tr> </table>	Points	2

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u> Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	3
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	4
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 7

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input checked="" type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input checked="" type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	4

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p align="center">H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		16
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		24

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

SC 2.0	Natural Heritage Wetlands (<i>see p. 87</i>) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.	Category
SC 2.1	Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.) S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO	
SC 2.2	Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland	
SC 3.0	Bogs (<i>see p. 87</i>) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p>The lagoon in which the wetland is located contains surface water that is saline or</p> <p><input type="checkbox"/> brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>		
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

<div>SC 6.0</div> <div>Interdunal Wetlands (<i>see p. 93</i>)</div> <div>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</div> <div><div><input type="checkbox"/> YES - go to SC 6.1</div><div><input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</div></div> <div><i>If you answer YES, you will still need to rate the wetland based on its functions.</i></div> <div>In practical terms, that means the following geographic areas:</div> <div><ul style="list-style-type: none">• Long Beach Peninsula - lands west of SR 103• Grayland-Westport - lands west of SR 105• Ocean Shores-Copalis - lands west of SR 1115 and SR 109.</div> <div>SC 6.1</div> <div>Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</div> <div><div><input type="checkbox"/> YES = Category II</div><div><input type="checkbox"/> NO - go to SC 6.2</div></div> <div>SC 6.2</div> <div>Is the wetland unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</div> <div><input type="checkbox"/> YES = Category III</div>	<div>Category</div> <div></div> <div>N/A</div>

Wetland name or number: 4

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 4 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 6.45 acres

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☒

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 18

Score for Hydrologic Functions 20

Score for Habitat Functions 30

TOTAL score for functions 68

Category based on SPECIAL CHARACTERISTICS of wetland

I ☒

II ☐

Does not Apply ☐

Final Category

(choose the "highest" category from above)

I

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input checked="" type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input checked="" type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input checked="" type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☒ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

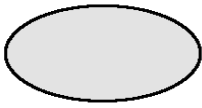

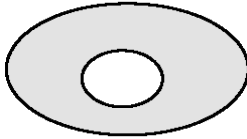

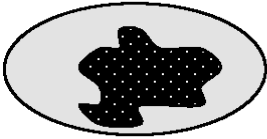

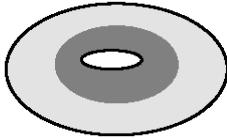

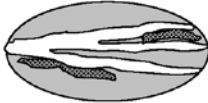

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input checked="" type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input checked="" type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	2
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 9
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 18 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input checked="" type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	5
Total for D 3		<i>Add the points in the boxes above</i> 10
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input checked="" type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier 2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 20

<i>These questions apply to wetlands of all HGM classes</i> HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.			
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>) <i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <div> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </div> <p><i>If the unit has a forested class, check if:</i></p> <div> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </div> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <div> <div>4 structures or more</div> <div>3 structures</div> <div>2 structures</div> <div>1 structure</div> <div>Points = 4</div> <div>Points = 2</div> <div>Points = 1</div> <div>Points = 0</div> </div>		1
Map of Cowardin classes			Figure __
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>) <i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <div> <div> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input checked="" type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input checked="" type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </div> <div> 4 or more types present 3 types present 2 types present 1 type present </div> <div> Points = 3 Points = 2 Points = 1 Points = 0 </div> </div>		3
Map of hydroperiods			Figure __
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>) <i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <div> <div> If you counted: List species below if you want to: </div> <div> <div>>19 species</div> <div>5-19 species</div> <div><5 species</div> <div>Points = 2</div> <div>Points = 1</div> <div>Points = 0</div> </div> </div>		2

<p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersions between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <div style="display: flex; justify-content: space-around; margin-top: 10px;"> <div style="text-align: center;"> <p>None = 0 points</p> </div> <div style="text-align: center;"> <p>Low = 1 point</p> </div> <div style="text-align: center;"> <p>Moderate = 2 points</p> </div> </div> <div style="text-align: center; margin-top: 20px;">    </div> <p style="text-align: center; margin-top: 10px;">High = 3 points</p> <p style="text-align: right; margin-right: 50px;">[riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<div style="background-color: #cccccc; padding: 2px;">Points</div> <div style="text-align: center; font-size: 24pt; margin-top: 20px;">3</div>
<p>H 1.5 <u>Special Habitat Features</u> (<i>see p. 77</i>)</p> <p><i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input checked="" type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<div style="text-align: center; font-size: 24pt; margin-top: 20px;">4</div>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>	
<div style="display: flex; justify-content: space-between;"> <div style="border: 1px solid black; padding: 5px;"> <p>H 1. TOTAL Score - potential for providing habitat</p> <p><i>Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</i></p> </div> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>13</p> </div> </div>	
<p>Comments:</p> <div style="border: 1px solid black; height: 150px; margin-top: 10px;"></div>	

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u> Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	4
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	4
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 8

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input checked="" type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input checked="" type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	4

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p align="center">H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		17
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		30

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

SC 2.0	Natural Heritage Wetlands (<i>see p. 87</i>) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.	Category
SC 2.1	Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.) S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO	
SC 2.2	Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland	
SC 3.0	Bogs (<i>see p. 87</i>) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

SC 4.0 Forested Wetlands (see p. 90)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input checked="" type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input checked="" type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		I
<p>SC 5.0 Wetlands in Coastal Lagoons (see p. 91)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>		
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 5

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 5 Date of site visit: 10/22/12

Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07

SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.10 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 14

Score for Hydrologic Functions 10

Score for Habitat Functions 15

TOTAL score for functions 39

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☒ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☒ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

HGM Classes Within a Delineated Wetland Boundary	Class to Use in Rating	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

<p>S Slope Wetlands</p> <p>HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.</p>

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p>No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input checked="" type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	1
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	1
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input checked="" type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 2

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input checked="" type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input checked="" type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	4

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	3
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		9
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		15

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input checked="" type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

Wetland name or number: 6

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 6 Date of site visit: 10/22/12

Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07

SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.05 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 16

Score for Hydrologic Functions 16

Score for Habitat Functions 12

TOTAL score for functions 44

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

<p>S Slope Wetlands</p> <p>HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.</p>

H 1.4	<p>Interspersion of Habitats (<i>see p. 76</i>)</p> <p>Decide from the diagrams below whether interspersions between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</p> <div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p>None = 0 points</p> </div> <div style="text-align: center;">  <p>Low = 1 point</p> </div> <div style="text-align: center;">  <p>Moderate = 2 points</p> </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-end; margin-top: 10px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: left; margin-left: 20px;"> <p>[riparian braided channels]</p> </div> </div> <p style="text-align: center; margin-top: 10px;">High = 3 points</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<div style="background-color: #cccccc; padding: 2px; text-align: center; font-weight: bold;">Points</div> <div style="text-align: center; padding: 20px 0;">0</div>
H 1.5	<p>Special Habitat Features (<i>see p. 77</i>)</p> <p>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<div style="text-align: center; padding: 20px 0;">0</div>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>		
<p style="text-align: center; margin: 0;">H 1. TOTAL Score - potential for providing habitat</p> <p style="text-align: center; margin: 0;"><i>Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</i></p>		1
<p>Comments:</p> <div style="height: 100px; border: 1px solid black; margin-top: 5px;"></div>		

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p>No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> <input checked="" type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	2
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	1
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input checked="" type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	<p>3</p>

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		11
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		12

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = <i>go to SC 5.1</i> <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p><input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</p> <p><i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p><input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i></p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p><input type="checkbox"/> YES = Category III</p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 7

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 7 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.01 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 14

Score for Hydrologic Functions 4

Score for Habitat Functions 12

TOTAL score for functions 30

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>

Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

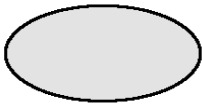

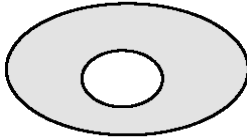

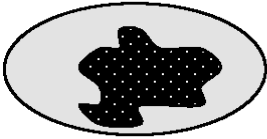

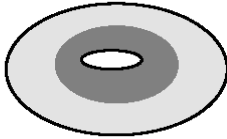

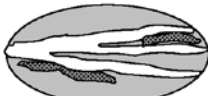

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 95\%$ of area. Points = 5 <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/2$ of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/10$ of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $< 1/10$ of area Points = 0	3
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input type="checkbox"/> Area seasonally ponded is $> 1/2$ total area of wetland. Points = 4 <input checked="" type="checkbox"/> Area seasonally ponded is $> 1/4$ total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is $< 1/4$ total area of wetland. Points = 0	2
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 7
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input checked="" type="checkbox"/> Other: <u>Area disturbed during past land use including: veg. clearing/soil compaction</u>	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 14 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input checked="" type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	0
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input checked="" type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	0
Total for D 3		<i>Add the points in the boxes above</i> 2
D 4.	Does wetland unit have the opportunity to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input checked="" type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier
		2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 4

<p><i>These questions apply to wetlands of all HGM classes</i></p> <p>HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.</p>										
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?	Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p><i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input checked="" type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	2
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	1
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input checked="" type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 3

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	Wetland Landscape (see p. 84) Choose the one description of the landscape around the wetland that best fits.	Points
<p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5

Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		12

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p>NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 8

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 8 Date of site visit: 10/22/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.07 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 18

Score for Hydrologic Functions 16

Score for Habitat Functions 16

TOTAL score for functions 50

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	3
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 9
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 18 <i>Add score to table on p. 1</i>

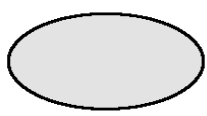

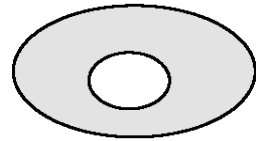

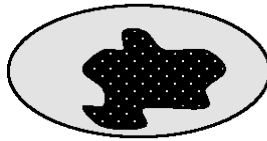

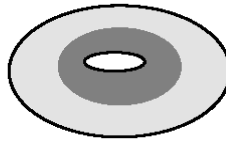

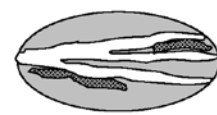

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 8
D 4.	Does wetland unit have the opportunity to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input checked="" type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier 2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 16

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p style="text-align: right;">Map of Cowardin classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	<p>1</p> <p>Figure __</p>
4 structures or more	Points = 4

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p>H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		16

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (see p. 90)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p>NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (see p. 91)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 9

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 9 Date of site visit: 10/#/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: **Figure** Plansheet Estimated size: 0.03 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 14

Score for Hydrologic Functions 16

Score for Habitat Functions 13

TOTAL score for functions 43

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☐

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☒ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5

☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

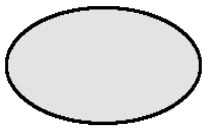

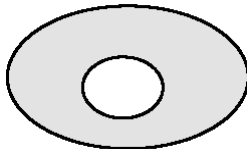

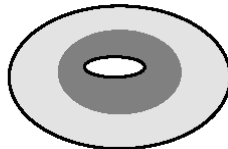

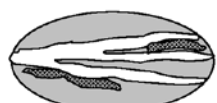

S Slope Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.		
S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1 Characteristics of vegetation that reduce the velocity of surface flows during storms. Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches. <div> <input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6 </div> <div> <input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3 </div> <div> <input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1 </div> <div> <input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0 </div>		6
S 3.2 Characteristics of the slope wetland that holds back small amounts of flood flows: the slope wetland has small surface depressions that can retain water over at least 10% of its area YES = 2 points NO = 0 points		2
Record the points from the boxes above		8
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70) Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? Note which of the following conditions apply. <div> <input checked="" type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems </div> <div> <input type="checkbox"/> Other: _____ </div>		Multiplier
YES - multiplier is 2 NO - multiplier is 1		2
TOTAL - Hydrologic Functions		16
Multiply the score from S 3. by S 4. Add score to table on p. 1		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table border="0"> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p><i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <p>If you counted:</p> <table border="0"> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p><i>List species below if you want to:</i></p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1		
>19 species	Points = 2									
5-19 species	Points = 1									
<5 species	Points = 0									

Total for page 2

H 1.4	<p>Interspersion of Habitats (<i>see p. 76</i>)</p> <p>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</p> <div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p>None = 0 points</p> </div> <div style="text-align: center;">  <p>Low = 1 point</p> </div> <div style="text-align: center;">  <p>Moderate = 2 points</p> </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-end; margin-top: 10px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: left; margin-left: 20px;"> <p>[riparian braided channels]</p> </div> </div> <p style="text-align: center; margin-top: 10px;">High = 3 points</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<div style="background-color: #cccccc; padding: 2px; text-align: center; font-weight: bold;">Points</div> <div style="text-align: center; padding: 20px 0;">0</div>
H 1.5	<p>Special Habitat Features (<i>see p. 77</i>)</p> <p>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<div style="text-align: center; padding: 20px 0;">2</div>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>		
<p style="text-align: center; margin: 0;">H 1. TOTAL Score - potential for providing habitat</p> <p style="text-align: center; margin: 0;"><i>Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</i></p>		4
<p>Comments:</p> <div style="height: 100px; border: 1px solid black; margin-top: 5px;"></div>		

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p><i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p>No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input checked="" type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	1
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	2
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	3
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		9
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		13

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> </div> <div style="text-align: right; margin-right: 20px;"> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I </div> <div style="text-align: right; margin-right: 20px;"> <input checked="" type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I </div> <div style="text-align: right; margin-right: 20px;"> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic oils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p><input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</p> <p><i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p><input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i></p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p><input type="checkbox"/> YES = Category III</p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 10

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 10 Date of site visit: 11/18/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.90 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 18

Score for Hydrologic Functions 10

Score for Habitat Functions 15

TOTAL score for functions 43

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input checked="" type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

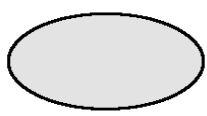

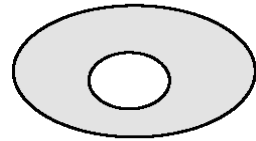

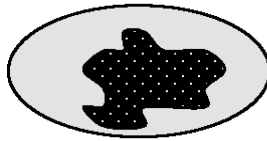

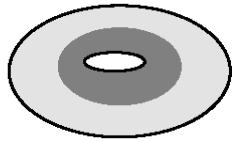

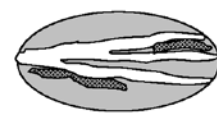

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input checked="" type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 95\%$ of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/2$ of area. Total for D 1		<i>Add the points in the boxes above</i> 9
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 18 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input checked="" type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	0
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 5
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input checked="" type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier 2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 10

<i>These questions apply to wetlands of all HGM classes</i> HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.			Points
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?		
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>) Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</p> <div> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </div> <p><i>If the unit has a forested class, check if:</i></p> <div> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </div> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <div> <div>4 structures or more</div> <div>3 structures</div> <div>2 structures</div> <div>1 structure</div> <div>Points = 4</div> <div>Points = 2</div> <div>Points = 1</div> <div>Points = 0</div> </div>	0	
Map of Cowardin classes			Figure __
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>) Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (<i>see text for descriptions of hydroperiods</i>).</p> <div> <div> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </div> <div> 4 or more types present 3 types present 2 types present 1 type present </div> <div> Points = 3 Points = 2 Points = 1 Points = 0 </div> </div>	1	
Map of hydroperiods			Figure __
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>) Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</p> <div> <div> If you counted: List species below if you want to: </div> <div> >19 species 5-19 species <5 species </div> <div> Points = 2 Points = 1 Points = 0 </div> </div>	1	

<p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersions between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p>None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p style="text-align: center;">High = 3 points</p> <p>[riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<p style="text-align: center;">Points</p> <p style="text-align: center;">0</p>
<p>H 1.5 <u>Special Habitat Features</u> (<i>see p. 77</i>)</p> <p><i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<p style="text-align: center;">1</p>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p align="center">H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		12
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		15

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = Go to SC 1.1 <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Go to SC 1.2</p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

<div>SC 6.0</div> <div>Interdunal Wetlands (<i>see p. 93</i>)</div> <div>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</div> <div><div><input type="checkbox"/> YES - <i>go to SC 6.1</i></div><div><input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</div></div> <div><i>If you answer YES, you will still need to rate the wetland based on its functions.</i></div> <div>In practical terms, that means the following geographic areas:</div> <div><ul style="list-style-type: none">• Long Beach Peninsula - lands west of SR 103• Grayland-Westport - lands west of SR 105• Ocean Shores-Copalis - lands west of SR 1115 and SR 109.</div> <div>SC 6.1</div> <div>Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</div> <div><div><input type="checkbox"/> YES = Category II</div><div><input checked="" type="checkbox"/> NO - <i>go to SC 6.2</i></div></div> <div>SC 6.2</div> <div>Is the wetland unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</div> <div><input type="checkbox"/> YES = Category III</div>	<div>Category</div> <div></div> <div>N/A</div>

Wetland name or number: 11

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 11 Date of site visit: 10/18/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.35 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 18

Score for Hydrologic Functions 10

Score for Habitat Functions 15

TOTAL score for functions 43

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input checked="" type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

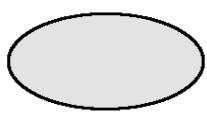

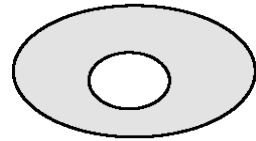

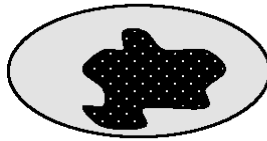

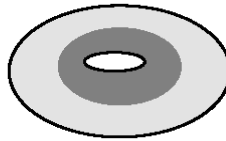

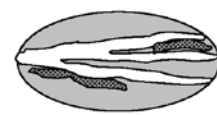

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input checked="" type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 95\%$ of area. Points = 5 <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/2$ of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $\geq 1/10$ of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation $< 1/10$ of area Points = 0	3
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is $> 1/2$ total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is $> 1/4$ total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is $< 1/4$ total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 9
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. 18 <i>Add score to table on p. 1</i>

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input checked="" type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	0
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 5
D 4.	Does wetland unit have the opportunity to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input checked="" type="checkbox"/> Other: <u>Wetland detains floodwaters prior to downstream road and wetlands.</u>	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. Add score to table on p. 1 10

<i>These questions apply to wetlands of all HGM classes</i> HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.		
H 1.	Does the wetland unit have the <u>potential</u> to provide habitat for many species?	Points
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>) Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</p> <div style="display: flex; justify-content: space-between;"> <div> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) <i>If the unit has a forested class, check if:</i> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon <i>Add the number of vegetation types that qualify. If you have:</i> </div> <div> 4 structures or more Points = 4 3 structures Points = 2 2 structures Points = 1 1 structure Points = 0 </div> </div>	0
Map of Cowardin classes		Figure __
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>) Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (<i>see text for descriptions of hydroperiods</i>).</p> <div style="display: flex; justify-content: space-between;"> <div> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </div> <div> 4 or more types present Points = 3 3 types present Points = 2 2 types present Points = 1 1 type present Points = 0 </div> </div>	1
Map of hydroperiods		Figure __
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>) Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</p> <div style="display: flex; justify-content: space-between;"> <div> <p style="text-align: right;">If you counted:</p> <p>List species below if you want to:</p> </div> <div> >19 species Points = 2 5-19 species Points = 1 <5 species Points = 0 </div> </div>	1

<p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p>None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p>High = 3 points [riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<p style="text-align: center;">Points</p> <p style="text-align: center;">0</p>
<p>H 1.5 <u>Special Habitat Features</u> (<i>see p. 77</i>)</p> <p><i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<p style="text-align: center;">1</p>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>	
<p style="text-align: center;">H 1. TOTAL Score - potential for providing habitat Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</p>	
<p>Comments:</p>	

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u> <i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input checked="" type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	3
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	1
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input checked="" type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 4

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input checked="" type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p>H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		12
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		15

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p>The lagoon in which the wetland is located contains surface water that is saline or</p> <p><input type="checkbox"/> brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 12

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 12 Date of site visit: 11/18/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.11 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 22

Score for Hydrologic Functions 20

Score for Habitat Functions 19

TOTAL score for functions 61

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

II

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input checked="" type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
SP4.	<i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input checked="" type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 11
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input checked="" type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. Add score to table on p. 1 22

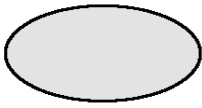

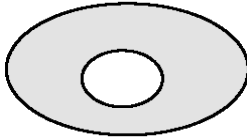

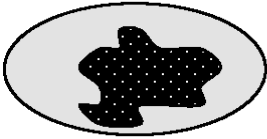

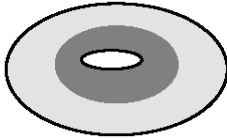

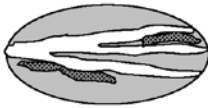

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input checked="" type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	5
Total for D 3		<i>Add the points in the boxes above</i> 10
D 4.	Does wetland unit have the <u>opportunity</u> to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input checked="" type="checkbox"/> Other: <u>Wetland detains floodwaters prior to downstream road and wetlands.</u>	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. Add score to table on p. 1 20

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. <p>H 1.4 <u>Interspersion of Habitats</u> (<i>see p. 76</i>)</p> <p><i>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p>None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p>High = 3 points [riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<p style="text-align: center;">Points</p> <p style="text-align: center;">2</p>
<p>H 1.5 <u>Special Habitat Features</u> (<i>see p. 77</i>)</p> <p><i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<p style="text-align: center;">1</p>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>	
<p style="text-align: center;">H 1. TOTAL Score - potential for providing habitat Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</p>	
<p>Comments:</p>	

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p><i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input checked="" type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	4
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	1
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input checked="" type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 5

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p>H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		19

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = Go to SC 1.1 <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Go to SC 1.2</p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual</p> <p><input type="checkbox"/> rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p>The lagoon in which the wetland is located contains surface water that is saline or</p> <p><input type="checkbox"/> brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

<div>SC 6.0</div> <div>Interdunal Wetlands (<i>see p. 93</i>)</div> <div>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</div> <div><div><input type="checkbox"/> YES - go to SC 6.1</div><div><input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</div></div> <div><i>If you answer YES, you will still need to rate the wetland based on its functions.</i></div> <div>In practical terms, that means the following geographic areas:</div> <div><ul style="list-style-type: none">• Long Beach Peninsula - lands west of SR 103• Grayland-Westport - lands west of SR 105• Ocean Shores-Copalis - lands west of SR 1115 and SR 109.</div> <div>SC 6.1</div> <div>Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</div> <div><div><input type="checkbox"/> YES = Category II</div><div><input type="checkbox"/> NO - go to SC 6.2</div></div> <div>SC 6.2</div> <div>Is the wetland unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</div> <div><input type="checkbox"/> YES = Category III</div>	<div>Category</div> <div></div> <div>N/A</div>

Wetland name or number: 13

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 13 Date of site visit: 9/18/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.16 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☒

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 11

Score for Hydrologic Functions 16

Score for Habitat Functions 24

TOTAL score for functions 51

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

II

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<p><i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<p><i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i></p> <p>For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).</p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<p><i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<p><i>Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.</i></p>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5 ☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☒ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input checked="" type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	2
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input checked="" type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	4
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 11
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		1
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. Add score to table on p. 1 11

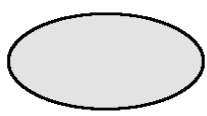

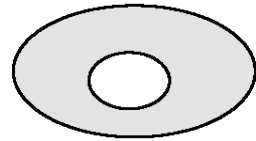

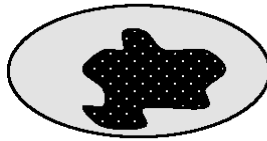

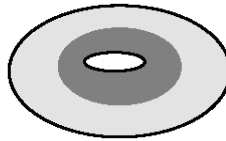

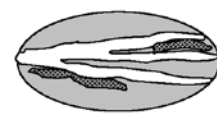

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input checked="" type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	2
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 8
D 4.	Does wetland unit have the opportunity to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input checked="" type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input type="checkbox"/> Other: _____ YES - multiplier is 2 NO - multiplier is 1	Multiplier 2
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 16

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	1
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only </p> <p> <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p><i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <p>If you counted:</p> <table> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p><i>List species below if you want to:</i></p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1		
>19 species	Points = 2									
5-19 species	Points = 1									
<5 species	Points = 0

<p>H 1.4</p>	<p>Interspersion of Habitats (see p. 76) <i>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</i></p> <div style="text-align: center;">     </div> <p>None = 0 points Low = 1 point Moderate = 2 points</p> <div style="text-align: center;">    </div> <p>High = 3 points</p> <p>[riparian braided channels]</p> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	<p>Points</p> <p style="text-align: center;">3</p>
<p>H 1.5</p>	<p>Special Habitat Features (see p. 77) <i>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</i></p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input checked="" type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	<p style="text-align: center;">3</p>
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>		
<p>H 1. TOTAL Score - potential for providing habitat <i>Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</i></p>		<p style="text-align: center;">9</p>
<p>Comments:</p>		

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers (see p. 80)</u></p> <p><i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input checked="" type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	5
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections (see p. 81)</u>	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (go to H 2.3) NO = go to H 2.2.2</p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (go to H 2.3) NO = go to H 2.2.3</p>	2
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>	

Total for page 7

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points	
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5	
<p>H 2. TOTAL Score - opportunity for providing habitat</p> <p><i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>			15
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>			24

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual</p> <p><input type="checkbox"/> rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

SC 2.0	Natural Heritage Wetlands (<i>see p. 87</i>) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.	Category
SC 2.1	Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.) S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO	
SC 2.2	Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland	
SC 3.0	Bogs (<i>see p. 87</i>) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p>The lagoon in which the wetland is located contains surface water that is saline or</p> <p><input type="checkbox"/> brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 14

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 14 Date of site visit: 9/18/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.23 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☒

III ☐

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 10

Score for Hydrologic Functions 20

Score for Habitat Functions 23

TOTAL score for functions 53

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

II

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input checked="" type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if unit has multiple HGM classes present	<input checked="" type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	<i>Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered animal or plant species (T/E species)?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	<i>Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species?</i> For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands (see p. 19 of data form).	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	<i>Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	<i>Does the wetland unit have a local significance in addition to its functions?</i> For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of permanent open water (without any vegetation on the surface) at least 20 acres (8 ha) in size;

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☐ The wetland is on a slope (*slope can be very gradual*).

☐ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☐ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit **meet all** of the following criteria?
- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**
6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*
- ☐ NO - go to 7 ☒ YES - the wetland class is **Depressional**
7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high ground water in the area. The wetland may be ditched, but has no obvious natural outlet.
- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**
8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes within your wetland. **NOTE:** Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represent more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input checked="" type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

D Depressional and Flats Wetlands		
WATER QUALITY FUNCTIONS - Indicators that wetland functions to improve water quality.		
D 1.	Does the wetland unit have the <u>potential</u> to improve water quality? (see p. 38)	Points
D 1.1	Characteristics of surface water flows out of the wetland: <input checked="" type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet) Points = 3 <input type="checkbox"/> Unit has an intermittently flowing, or highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (<i>permanently flowing</i>). Points = 1 <input type="checkbox"/> Unit is a flat depression (Q. 7 on key) or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit as "intermittently flowing.") Points = 1	3
		Provide photo or drawing Figure __
D 1.2	The soil 2 inches below the surface (or duff layer) is clay or organic (use NRCS definitions): <input type="checkbox"/> YES Points = 4 <input checked="" type="checkbox"/> NO Points = 0	0
D 1.3	Characteristics of persistent vegetation (emergent, shrub, and/or forest Cowardin class): <input checked="" type="checkbox"/> Wetland has persistent, ungrazed vegetation >=95% of area. Points = 5 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/2 of area. Points = 3 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation >=1/10 of area. Points = 1 <input type="checkbox"/> Wetland has persistent, ungrazed vegetation <1/10 of area Points = 0	5
		Map of Cowardin vegetation classes Figure __
D 1.4	Characteristics of seasonal ponding or inundation. <i>This is the area of the wetland that is ponded for at least 2 months, but dries out sometime during the year. Do not count the area that is permanently ponded. Estimate area as the average condition 5 out of 10 years.</i> <input type="checkbox"/> Area seasonally ponded is >1/2 total area of wetland. Points = 4 <input checked="" type="checkbox"/> Area seasonally ponded is >1/4 total area of wetland. Points = 2 <input type="checkbox"/> Area seasonally ponded is <1/4 total area of wetland. Points = 0	2
		Map of hydroperiods Figure __
Total for D 1		<i>Add the points in the boxes above</i> 10
D 2.	Does the wetland unit have the <u>opportunity</u> to improve water quality? (see p. 44) Answer YES if you know or believe there are pollutants in ground water or surface water coming into the wetland that would otherwise reduce water quality in streams, lakes, or ground water downgradient from the wetland. <i>Note which of the following conditions provide the sources of pollutants:</i> <input type="checkbox"/> Grazing in the wetland or within 150 feet. <input type="checkbox"/> Untreated stormwater discharges to wetland. <input type="checkbox"/> Tilled fields or orchards within 150 feet of wetland. <input type="checkbox"/> A stream or culvert discharges into wetland that drains developed areas, residential areas, farmed fields, roads, or clear-cut logging. <input type="checkbox"/> Residential, urban areas, golf courses are within 150 feet of wetland. <input type="checkbox"/> Wetland is fed by ground water high in phosphorus or nitrogen. <input type="checkbox"/> Other: _____	Multiplier
YES - multiplier is 2		1
NO - multiplier is 1		
TOTAL - Water Quality Functions		Multiply the score from D 1. by D 2. Add score to table on p. 1 10

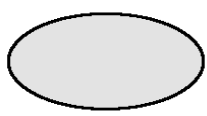

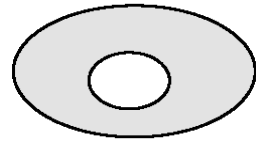

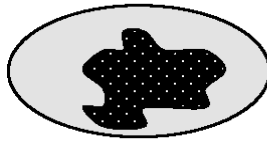

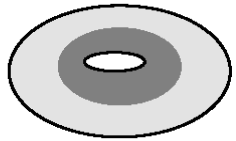

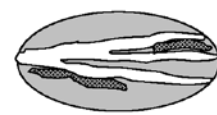

D Depressional and Flats Wetlands		
HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding/stream degradation.		
D 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 46)	Points
D 3.1	Characteristics of surface water flows out of the wetland: <input checked="" type="checkbox"/> Unit is a depression with no surface water leaving it (no outlet). Points = 4 <input type="checkbox"/> Unit has an intermittently flowing, OR highly constricted permanently flowing outlet. Points = 2 <input type="checkbox"/> Unit is a "flat" depression (Q. 7 on key), or in the Flats class, with permanent surface outflow and no obvious natural outlet and/or outlet is a man-made ditch. (If ditch is not permanently flowing, treat unit at "intermittently flowing.") Points = 1 <input type="checkbox"/> Unit has an unconstricted, or slightly constricted, surface outlet (permanently flowing). Points = 0	4
D 3.2	Depth of storage during wet periods. <i>Estimate the height of ponding above the bottom of the outlet. For units with no outlet measure from the surface of permanent water or deepest part (if dry).</i> <input type="checkbox"/> Marks of ponding are 3 feet or more above the surface or bottom of outlet. Points = 7 <input type="checkbox"/> The wetland is a "headwater" wetland. Points = 5 <input type="checkbox"/> Marks of ponding between 2 feet to <3 feet from surface or bottom of outlet. Points = 5 <input checked="" type="checkbox"/> Marks are at least 0.5 feet to <2 feet from surface or bottom of outlet. Points = 3 <input type="checkbox"/> Wetland is flat (yes to Q. 2 or Q. 7 on key) but has small depressions on the surface that trap water. Points = 1 <input type="checkbox"/> Marks of ponding are less than 0.5 feet. Points = 0	3
D 3.3	Contribution of wetland to storage in the watershed. <i>Estimate the ratio of the area of upstream basin contributing surface water to the wetland to the area of the wetland itself.</i> <input type="checkbox"/> The area of the basin is <10 times the area of the unit. Points = 5 <input checked="" type="checkbox"/> The area of the basin is 10 to 100 times the area of the unit. Points = 3 <input type="checkbox"/> The area of the basin is >100 times the area of the unit. Points = 0 <input type="checkbox"/> Entire unit is in the Flats class (basin=wetland) Points = 5	3
Total for D 3		<i>Add the points in the boxes above</i> 10
D 4.	Does wetland unit have the opportunity to reduce flooding/erosion? (see p. 49) Answer YES if the unit is in a location in the watershed where the flood storage, or reduction in water velocity, helps protect downstream property and aquatic resources from flooding or excessive and/or erosive flows. Answer NO if the water coming into the wetland is controlled by a structure such as flood gate, tide gate, flap valve, reservoir, etc. OR you estimate that more than 90% of the water in the wetland is from groundwater in areas where damaging groundwater flooding does not occur. <i>Note which of the following indicators of opportunity apply:</i> <input type="checkbox"/> Wetland is in a headwater of a river or stream that has flooding problems. <input type="checkbox"/> Wetland drains to a river or stream that has flooding problems. <input checked="" type="checkbox"/> Wetland has no outlet and impounds surface runoff water that might otherwise flow into a river or stream that has flooding problems. <input checked="" type="checkbox"/> Other: <u>Wetland upslope of roadway, jurisdictional ditches, and wetlands.</u>	Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		Multiply the score from D 3. by D 4. <i>Add score to table on p. 1</i> 20

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points																								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input checked="" type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p style="text-align: right;">Map of Cowardin classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	2

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests: (Old growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8/acre) >81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadance, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H 2.4	<u>Wetland Landscape (see p. 84)</u>	Points
<p><i>Choose the one description of the landscape around the wetland that best fits.</i></p> <p>There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands</p> <p><input checked="" type="checkbox"/> OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5</p> <p><input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3</p> <p><input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3</p> <p><input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2</p> <p><input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0</p>		5
<p>H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i></p>		15
<p>Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1</p>		23

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type		Category
Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.		
SC 1.0	<p><u>Estuarine Wetlands</u> (see p. 86)</p> <p>Does the wetland unit meet the following criteria for Estuarine wetlands?</p> <p><input type="checkbox"/> The dominant water regime is tidal,</p> <p><input type="checkbox"/> Vegetated, and</p> <p><input type="checkbox"/> With a salinity greater than 0.5 ppt.</p> <p><input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland</p>	
SC 1.1	<p>Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i></p>	
SC 1.2	<p>Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre.</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands.</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species?</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetation in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <ol style="list-style-type: none"> Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <p><input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <ol style="list-style-type: none"> Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <p><input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4</p> <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <ol style="list-style-type: none"> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <p><input type="checkbox"/> YES - Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

SC 4.0 Forested Wetlands (<i>see p. 90</i>)		Category
<p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p>NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>		
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p>The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p> <p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p>The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = Category II</p>		

Wetland name or number: 15

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 15 Date of site visit: 9/23/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.04 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 7

Score for Hydrologic Functions 16

Score for Habitat Functions 16

TOTAL score for functions 39

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5

☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

HGM Classes Within a Delineated Wetland Boundary	Class to Use in Rating	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

<p>S Slope Wetlands</p> <p>HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.</p>

S 3.	Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (<i>see p. 68</i>)	Points
------	--	--------

6.2.1	Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Chlorophyll</i>	
-------	---	--

<input checked="" type="checkbox"/>	Dense, uncut, rigid vegetation covers >90% of wetland area	Points = 6	6
<input type="checkbox"/>	Dense, uncut, rigid vegetation covers >1/2 of wetland area	Points = 3	
<input type="checkbox"/>	Dense, uncut, rigid vegetation covers >1/4 of wetland area	Points = 1	
<input type="checkbox"/>	More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid	Points = 0	

YES = 2 points	NO = 0 points
-----------------------	----------------------

NO = 0 points

Record the points from the boxes above 8

[illegible]

☐ Wetland has surface runoff that drains to a river or stream that has flooding problems

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50	51	52	53	54	55	56	57	58	59	60	61	62	63	64	65	66	67	68	69	70	71	72	73	74	75	76	77	78	79	80	81	82	83	84	85	86	87	88	89	90	91	92	93	94	95	96	97	98	99	100	101	102	103	104	105	106	107	108	109	110	111	112	113	114	115	116	117	118	119	120	121	122	123	124	125	126	127	128	129	130	131	132	133	134	135	136	137	138	139	140	141	142	143	144	145	146	147	148	149	150	151	152	153	154	155	156	157	158	159	160	161	162	163	164	165	166	167	168	169	170	171	172	173	174	175	176	177	178	179	180	181	182	183	184	185	186	187	188	189	190	191	192	193	194	195	196	197	198	199	200	201	202	203	204	205	206	207	208	209	210	211	212	213	214	215	216	217	218	219	220	221	222	223	224	225	226	227	228	229	230	231	232	233	234	235	236	237	238	239	240	241	242	243	244	245	246	247	248	249	250	251	252	253	254	255	256	257	258	259	260	261	262	263	264	265	266	267	268	269	270	271	272	273	274	275	276	277	278	279	280	281	282	283	284	285	286	287	288	289	290	291	292	293	294	295	296	297	298	299	300	301	302	303	304	305	306	307	308	309	310	311	312	313	314	315	316	317	318	319	320	321	322	323	324	325	326	327	328	329	330	331	332	333	334	335	336	337	338	339	340	341	342	343	344	345	346	347	348	349	350	351	352	353	354	355	356	357	358	359	360	361	362	363	364	365	366	367	368	369	370	371	372	373	374	375	376	377	378	379	380	381	382	383	384	385	386	387	388	389	390	391	392	393	394	395	396	397	398	399	400	401	402	403	404	405	406	407	408	409	410	411	412	413	414	415	416	417	418	419	420	421	422	423	424	425	426	427	428	429	430	431	432	433	434	435	436	437	438	439	440	441	442	443	444	445	446	447	448	449	450	451	452	453	454	455	456	457	458	459	460	461	462	463	464	465	466
---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

NO - multiplier is 1

<i>Add score to table on p. 1</i>	10
-----------------------------------	----

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table border="0"> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p><i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <p>If you counted:</p> <table border="0"> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p><i>List species below if you want to:</i></p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1		
>19 species	Points = 2									
5-19 species	Points = 1									
<5 species	Points = 0

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p><i>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</i></p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input checked="" type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	4
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	<p>3</p>

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		12
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		16

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic oils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p> <input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i> </p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p> <input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i> </p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p> <input type="checkbox"/> YES = Category III </p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 16

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 16 Date of site visit: 9/25/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.07 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 10

Score for Hydrologic Functions 10

Score for Habitat Functions 17

TOTAL score for functions 37

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2 ☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe** ☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3 ☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4 ☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5 ☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

HGM Classes Within a Delineated Wetland Boundary	Class to Use in Rating	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

S	Slope Wetlands
---	----------------

HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.

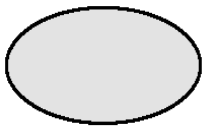

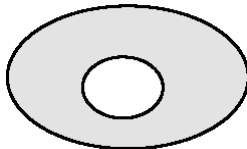

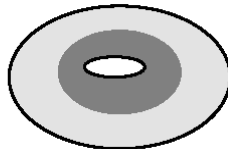

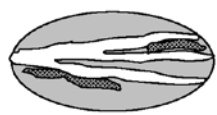

S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1	<p>Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches.</i></p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6</p> <p><input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1</p> <p><input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0</p>	3
S 3.2	<p>Characteristics of the slope wetland that holds back small amounts of flood flows: <i>the slope wetland has small surface depressions that can retain water over at least 10% of its area</i></p> <p>YES = 2 points NO = 0 points</p>	2
Record the points from the boxes above		5
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70)		
<p>Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? <i>Note which of the following conditions apply.</i></p> <p><input type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems</p> <p><input checked="" type="checkbox"/> Other: <u>Wetland upslope of roadway and jurisdictional ditches.</u></p>		Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		10
<p>Multiply the score from S 3. by S 4.</p> <p><i>Add score to table on p. 1</i></p>		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	1
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p><i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <p>If you counted:</p> <table> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p>List species below if you want to:</p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1		
>19 species	Points = 2									
5-19 species	Points = 1									
<5 species	Points = 0

H 2.3		Points
<p>Near or Adjacent to Other Priority Habitats Listed by WDFW (see p. 82)</p> <p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>		1

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3

H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		11
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		17

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic oils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p> <input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i> </p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p> <input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i> </p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p> <input type="checkbox"/> YES = Category III </p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 17

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 17 Date of site visit: 9/25/12

Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07

SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.11 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 6

Score for Hydrologic Functions 16

Score for Habitat Functions 19

TOTAL score for functions 41

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5

☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

HGM Classes Within a Delineated Wetland Boundary	Class to Use in Rating	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

S	Slope Wetlands
---	----------------

HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.

S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1	<p>Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches.</i></p> <p><input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1</p> <p><input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0</p>	6
S 3.2	<p>Characteristics of the slope wetland that holds back small amounts of flood flows: <i>the slope wetland has small surface depressions that can retain water over at least 10% of its area</i></p> <p>YES = 2 points NO = 0 points</p>	2
Record the points from the boxes above		8
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70)		
<p>Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? <i>Note which of the following conditions apply.</i></p> <p><input type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems</p> <p><input checked="" type="checkbox"/> Other: <u>Wetland upslope of the highway and other wetlands.</u></p>		Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		16
<p>Multiply the score from S 3. by S 4.</p> <p><i>Add score to table on p. 1</i></p>		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input checked="" type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p>If the unit has a forested class, check if:</p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p>Add the number of vegetation types that qualify. If you have:</p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	1
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table border="0"> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		14
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		19

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic oils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	<p>0</p>

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = <i>go to SC 5.1</i> <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p> <input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i> </p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p> <input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i> </p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p> <input type="checkbox"/> YES = Category III </p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 18

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 18 Date of site visit: 9/24/12

Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07

SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: **Figure** Plansheet Estimated size: 0.14 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☐

IV ☒

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 6

Score for Hydrologic Functions 2

Score for Habitat Functions 14

TOTAL score for functions 22

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

IV

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5

☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

S	Slope Wetlands
---	----------------

HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.

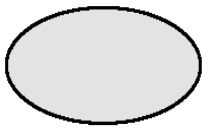

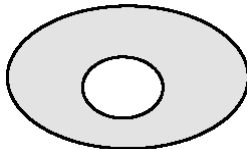

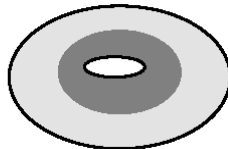

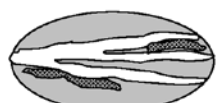

S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1	<p>Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches.</i></p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3</p> <p><input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1</p> <p><input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0</p>	1
S 3.2	<p>Characteristics of the slope wetland that holds back small amounts of flood flows: <i>the slope wetland has small surface depressions that can retain water over at least 10% of its area</i></p> <p>YES = 2 points NO = 0 points</p>	0
Record the points from the boxes above		1
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70)		
<p>Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? <i>Note which of the following conditions apply.</i></p> <p><input type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems</p> <p><input checked="" type="checkbox"/> Other: <u>Wetland is upslope of roadway, jurisdictional ditches and other wetlands.</u></p>		Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		2
<p>Multiply the score from S 3. by S 4.</p> <p><i>Add score to table on p. 1</i></p>		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	3

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		14
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		14

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p><input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</p> <p><i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p><input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i></p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p><input type="checkbox"/> YES = Category III</p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 19

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 19 Date of site visit: 9/25/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.05 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☐

IV ☒

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 2

Score for Hydrologic Functions 6

Score for Habitat Functions 18

TOTAL score for functions 26

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

IV

Check the appropriate type and class of wetland being rated.

Wetland Type	
Estuarine	<input type="checkbox"/>
Natural Heritage Wetland	<input type="checkbox"/>
Bog	<input type="checkbox"/>
Mature Forest	<input type="checkbox"/>
Old Growth Forest	<input type="checkbox"/>
Coastal Lagoon	<input type="checkbox"/>
Interdunal	<input type="checkbox"/>
None of the above	<input checked="" type="checkbox"/>

Wetland Class	
Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☒ NO - go to 5

☐ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

S	Slope Wetlands
---	----------------

HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.

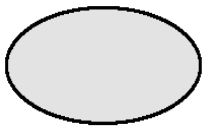

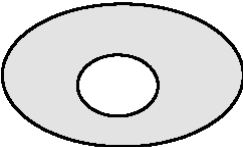

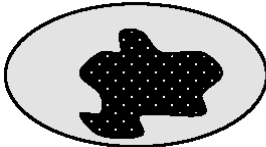

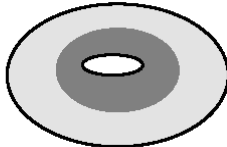

S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1	<p>Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches.</i></p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6</p> <p><input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1</p> <p><input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0</p>	3
S 3.2	<p>Characteristics of the slope wetland that holds back small amounts of flood flows: <i>the slope wetland has small surface depressions that can retain water over at least 10% of its area</i></p> <p>YES = 2 points NO = 0 points</p>	0
Record the points from the boxes above		3
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70)		
<p>Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? <i>Note which of the following conditions apply.</i></p> <p><input type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems</p> <p><input checked="" type="checkbox"/> Other: <u>Wetland is upslope of roadway, jurisdictional ditches, and wetlands.</u></p>		Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		6
Multiply the score from S 3. by S 4.		
Add score to table on p. 1		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</p> <p> <input type="checkbox"/> Aquatic bed <input type="checkbox"/> Emergent plants <input checked="" type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p>If the unit has a forested class, check if:</p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p>Add the number of vegetation types that qualify. If you have:</p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table border="0"> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</p> <p>If you counted:</p> <table border="0"> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p>List species below if you want to:</p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1

H 2.3		Points
<p><u>Near or Adjacent to Other Priority Habitats Listed by WDFW (see p. 82)</u></p> <p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>		3

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		14
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		18

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 Natural Heritage Wetlands (<i>see p. 87</i>)</p> <p>Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (<i>see p. 79</i>) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 Bogs (<i>see p. 87</i>)</p> <p>Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <ol style="list-style-type: none"> Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic soils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2 Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 <p>NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating 	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p><input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</p> <p><i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p><input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i></p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p><input type="checkbox"/> YES = Category III</p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Wetland name or number: 20

WETLAND RATING FORM - WESTERN WASHINGTON

Version 2 - Updated July 2006 to increase accuracy and reproducibility among users

Updated Oct. 2008 with the new WDFW definitions for priority habitats

Name of wetland (if known): SR 18/I-90 Flyover Ramp-Wetland 20 Date of site visit: 9/24/12
Rated by : Beth Toberer Trained by Ecology? Yes ☒ No ☐ Date: 11/7/07
SEC: 2 TOWNSHIP: 23 North RANGE: 7 East Is S/T/R in Appendix D? Yes ☐ No ☒

Map of wetland unit: Figure Plansheet Estimated size: 0.22 acre

SUMMARY OF RATING

Category based on FUNCTIONS provided by wetland:

I ☐

II ☐

III ☒

IV ☐

Category I = Score ≥ 70

Category II = Score 51-69

Category III = Score 30-50

Category IV = Score < 30

Score for Water Quality Functions 12

Score for Hydrologic Functions 12

Score for Habitat Functions 16

TOTAL score for functions 40

Category based on SPECIAL CHARACTERISTICS of wetland

I ☐

II ☐

Does not Apply ☒

Final Category

(choose the "highest" category from above)

III

Check the appropriate type and class of wetland being rated.

Depressional	<input type="checkbox"/>
Riverine	<input type="checkbox"/>
Lake-fringe	<input type="checkbox"/>
Slope	<input checked="" type="checkbox"/>
Flats	<input type="checkbox"/>
Freshwater Tidal	<input type="checkbox"/>
Check if multiple HGM classes are present	<input type="checkbox"/>

Comments:

Does the wetland unit being rated meet any of the criteria below?

If you answer YES to any of the questions below, you will need to protect the wetland according to the regulations regarding the special characteristics found in the wetland.

Check List for Wetlands That May Need Special Protection (in addition to the protection recommended for its category)		YES	NO
SP1.	Has the wetland unit been documented as a habitat for any federally listed Threatened or Endangered (T/E) plant or animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state or federal database.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP2.	Has the wetland unit been documented as habitat for any state listed Threatened or Endangered animal species? For the purposes of this rating system, "documented" means the wetland is on the appropriate state database. Note: Wetlands with State listed plant species are categorized as Category I Natural Heritage Wetlands.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP3.	Does the wetland unit contain individuals of Priority species listed by the WDFW for the state?	<input type="checkbox"/>	<input checked="" type="checkbox"/>
SP4.	Does the wetland unit have a local significance in addition to its functions? For example, the wetland has been identified in the Shoreline Master Program, the Critical Areas Ordinance, or in a local management plan as having special significance.	<input type="checkbox"/>	<input checked="" type="checkbox"/>

To complete the next part of the data sheet, you will need to determine the Hydrogeomorphic Class of the wetland being rated.

The hydrogeomorphic classification groups wetlands into those that function in similar ways. This simplifies the questions needed to answer how well the wetland functions. The Hydrogeomorphic Class of a wetland can be determined using the key below. See p. 24 for more detailed instructions on classifying wetlands.

Classification of Vegetated Wetlands in Western Washington

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides (i.e., except during floods)?

☒ NO - go to 2

☐ YES - the wetland class is **Tidal Fringe**

If YES, is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

☐ YES - **Freshwater Tidal Fringe**

☐ NO - **Saltwater Tidal Fringe (Estuarine)**

If your wetland can be classified as a Freshwater Tidal Fringe, use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is rated as an Estuarine wetland. Wetlands that were called estuarine in the first and second editions of the rating system are called Saltwater Tidal Fringe in the Hydrogeomorphic Classification. Estuarine wetlands were categorized separately in the earlier editions, and this separation is being kept in this revision. To maintain consistency between editions, the term "Estuarine" wetland is being kept. Please note, however, that the characteristics that define Category I and II estuarine wetlands have changed (see p. xx).

2. The entire wetland unit is flat and precipitation is only source (>90%) of water to it. Groundwater and surface water

☒ NO - go to 3

☐ YES - the wetland class is **Flats**

If your wetland can be classified as a "Flats" wetland, use the form for **Depressional** wetlands.

3. Does the entire wetland unit **meet both** of the following criteria?

☐ The vegetated part of the wetland is on the shores of a body of open water (without any vegetation on the surface) where at least 20 acres (8 ha) are permanently inundated (ponded or flooded);

☐ At least 30% of the open water area is deeper than 6.6 feet (2 m)?

☒ NO - go to 4

☐ YES - the wetland class is **Lake-fringe (Lacustrine Fringe)**

4. Does the entire wetland unit **meet all** of the following criteria?

☒ The wetland is on a slope (*slope can be very gradual*).

☒ The water flows through the wetland in one direction (unidirectional) and usually comes from seeps. It may flow subsurface, as sheetflow, or in a swale without distinct banks.

☒ The water leaves the wetland **without being impounded**.

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 feet in diameter and less than 1 foot deep).

☐ NO - go to 5

☒ YES - the wetland class is **Slope**

5. Does the entire wetland unit meet all of the following criteria?

- ☐ The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river.
- ☐ The overbank flooding occurs once every two years.
- ☐ NO - go to 6 ☐ YES - the wetland class is **Riverine**

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time of the year? *This means that any outlet, if present, is higher than the interior of the wetland.*

- ☐ NO - go to 7 ☐ YES - the wetland class is **Depressional**

7. Is the entire wetland unit located in a very flat area with no obvious depression and no stream or river running through it and providing water? The unit seems to be maintained by higher ground water in the area. The wetland may be ditched, but has no obvious natural outlet.

- ☐ NO - go to 8 ☐ YES - the wetland class is **Depressional**

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a depressional wetland has a zone of flooding along its sides. **GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT** (make a rough sketch to help you decide.) Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within your wetland. NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the second class is less than 10% of the unit, classify the wetland using the class that represents more than 90% of the total area.

<i>HGM Classes Within a Delineated Wetland Boundary</i>	<i>Class to Use in Rating</i>	
Slope + Riverine	Riverine	<input type="checkbox"/>
Slope + Depressional	Depressional	<input type="checkbox"/>
Slope + Lake-fringe	Lake-fringe	<input type="checkbox"/>
Depressional + Riverine along stream within boundary	Depressional	<input type="checkbox"/>
Depressional + Lake-fringe	Depressional	<input type="checkbox"/>
Saltwater Tidal Fringe and any other class of freshwater wetland	Treat as ESTUARINE under wetlands with special characteristics	<input type="checkbox"/>

If you are unable still to determine which of the above criteria apply to your wetland, or you have more than 2 HGM classes within a wetland boundary, classify the wetland as **Depressional** for the rating.

S	Slope Wetlands
---	----------------

HYDROLOGIC FUNCTIONS - Indicators that wetland functions to reduce flooding and stream erosion.

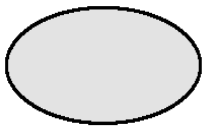

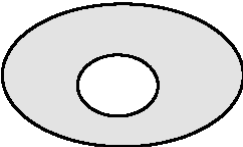

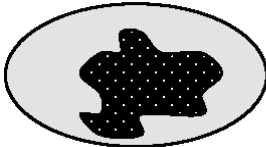

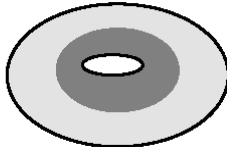

S 3. Does wetland unit have the <u>potential</u> to reduce flooding/erosion? (see p. 68)		Points
S 3.1	<p>Characteristics of vegetation that reduce the velocity of surface flows during storms. <i>Choose the points appropriate for the description that best fits the vegetation in the wetland. Dense vegetation means you have trouble seeing the soil surface (>75% cover), and uncut means not grazed or mowed and plants are higher than 6 inches.</i></p> <p><input checked="" type="checkbox"/> Dense, uncut, rigid vegetation covers >90% of wetland area Points = 6</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/2 of wetland area Points = 3</p> <p><input type="checkbox"/> Dense, uncut, rigid vegetation covers >1/4 of wetland area Points = 1</p> <p><input type="checkbox"/> More than 3/4 of area is grazed, mowed, tilled, or vegetation is not rigid Points = 0</p>	6
S 3.2	<p>Characteristics of the slope wetland that holds back small amounts of flood flows: <i>the slope wetland has small surface depressions that can retain water over at least 10% of its area</i></p> <p>YES = 2 points NO = 0 points</p>	0
Record the points from the boxes above		6
S 4. Does wetland unit have the opportunity to reduce flooding and erosion? (see p. 70)		
<p>Is the wetland in a landscape position where the reduction in water velocity it provides help to protect downstream property and aquatic resources from flooding or excessive and/or erosive flows? <i>Note which of the following conditions apply.</i></p> <p><input type="checkbox"/> Wetland has surface runoff that drains to a river or stream that has flooding problems</p> <p><input checked="" type="checkbox"/> Other: <u>Wetland is upslope of jurisdictional ditches, roadway and other wetlands.</u></p>		Multiplier
YES - multiplier is 2		2
NO - multiplier is 1		
TOTAL - Hydrologic Functions		12
<p>Multiply the score from S 3. by S 4.</p> <p><i>Add score to table on p. 1</i></p>		

These questions apply to wetlands of all HGM classes

HABITAT FUNCTIONS - Indicators that wetland functions to provide important habitat.

H 1. Does the wetland unit have the <u>potential</u> to provide habitat for many species?		Points								
H 1.1	<p><u>Vegetation structure</u> (<i>see p. 72</i>)</p> <p><i>Check the types of vegetation classes present (as defined by Cowardin). Size threshold for class is 1/4 acre or more than 10% of the area if unit is smaller than 2.5 acres.</i></p> <p> <input type="checkbox"/> Aquatic bed <input checked="" type="checkbox"/> Emergent plants <input type="checkbox"/> Scrub/shrub (areas where shrubs have >30% cover) <input type="checkbox"/> Forested (areas where trees have >30% cover) </p> <p><i>If the unit has a forested class, check if:</i></p> <p> <input type="checkbox"/> The forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/ground-cover) that each cover 20% within the forested polygon. </p> <p><i>Add the number of vegetation types that qualify. If you have:</i></p> <table border="0"> <tr> <td>4 structures or more</td> <td>Points = 4</td> </tr> <tr> <td>3 structures</td> <td>Points = 2</td> </tr> <tr> <td>2 structures</td> <td>Points = 1</td> </tr> <tr> <td>1 structure</td> <td>Points = 0</td> </tr> </table> <p>Map of Cowardin vegetation classes</p>	4 structures or more	Points = 4	3 structures	Points = 2	2 structures	Points = 1	1 structure	Points = 0	0
4 structures or more	Points = 4									
3 structures	Points = 2									
2 structures	Points = 1									
1 structure	Points = 0									
H 1.2	<p><u>Hydroperiods</u> (<i>see p. 73</i>)</p> <p><i>Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover more than 10% of the wetland if less than 2.5 acres in size or 1/4 acre to count (see text for descriptions of hydroperiods).</i></p> <p> <input type="checkbox"/> Permanently flooded or inundated <input checked="" type="checkbox"/> Seasonally flooded or inundated <input type="checkbox"/> Occasionally flooded or inundated <input checked="" type="checkbox"/> Saturated only <input type="checkbox"/> Permanently flowing stream or river in, or adjacent to, the wetland <input type="checkbox"/> Seasonally flowing stream in, or adjacent to, the wetland <input type="checkbox"/> Lake-fringe wetland = 2 points <input type="checkbox"/> Freshwater tidal wetland = 2 points </p> <table border="0"> <tr> <td>4 or more types present</td> <td>Points = 3</td> </tr> <tr> <td>3 types present</td> <td>Points = 2</td> </tr> <tr> <td>2 types present</td> <td>Points = 1</td> </tr> <tr> <td>1 type present</td> <td>Points = 0</td> </tr> </table> <p>Map of hydroperiods</p>	4 or more types present	Points = 3	3 types present	Points = 2	2 types present	Points = 1	1 type present	Points = 0	1
4 or more types present	Points = 3									
3 types present	Points = 2									
2 types present	Points = 1									
1 type present	Points = 0									
H 1.3	<p><u>Richness of Plant Species</u> (<i>see p. 75</i>)</p> <p><i>Count the number of plant species in the wetland that cover at least 10 sq. ft. (different patches of the same species can be combined to meet the size threshold). You do not have to name the species. Do not include Eurasian Milfoil, reed canarygrass, purple loosestrife, Canadian Thistle.</i></p> <p><i>If you counted:</i></p> <table border="0"> <tr> <td>>19 species</td> <td>Points = 2</td> </tr> <tr> <td>5-19 species</td> <td>Points = 1</td> </tr> <tr> <td><5 species</td> <td>Points = 0</td> </tr> </table> <p><i>List species below if you want to:</i></p>	>19 species	Points = 2	5-19 species	Points = 1	<5 species	Points = 0	1		
>19 species	Points = 2									
5-19 species	Points = 1									
<5 species	Points = 0									

Total for page 2

H 1.4	<p>Interspersion of Habitats (<i>see p. 76</i>)</p> <p>Decide from the diagrams below whether interspersion between Cowardin vegetation classes (described in H 1.1) or the classes and unvegetated areas (can include open water or mudflats) is high, medium, low, or none.</p> <div style="display: flex; justify-content: space-around; align-items: flex-end;"> <div style="text-align: center;">  <p>None = 0 points</p> </div> <div style="text-align: center;">  <p>Low = 1 point</p> </div> <div style="text-align: center;">  <p>Moderate = 2 points</p> </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-end; margin-top: 10px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  <p>High = 3 points</p> </div> <div style="text-align: center;">  </div> <div style="text-align: center;"> <p>[riparian braided channels]</p> </div> </div> <p>NOTE: If you have four or more vegetation types or three vegetation types and open water, the rating is always "high". Use map of Cowardin vegetation classes.</p>	Points 0
H 1.5	<p>Special Habitat Features (<i>see p. 77</i>)</p> <p>Check the habitat features that are present in the wetland. The number of checks is the number of points you put into the next column.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Large, downed, woody debris within the wetland (>4 inches in diameter and 6 feet long). <input type="checkbox"/> Standing snags (diameter at the bottom >4 inches) in the wetland. <input type="checkbox"/> Undercut banks are present for at least 6.6 feet (2 m) and/or overhanging vegetation extends at least 3.3 feet (1 m) over a stream (or ditch) in or contiguous with the wetland, for at least 33 feet (10 m). <input type="checkbox"/> Stable steep banks of fine material that might be used by beaver/muskrat for denning (>30° slope) OR signs of recent beaver activity are present (<i>cut shrubs or trees that have not yet turned brown/gray</i>). <input type="checkbox"/> At least 1/4 acre of thin-stemmed persistent vegetation or woody branches are present in areas that are permanently or seasonally inundated (<i>structures for egg-laying by amphibians</i>). <input checked="" type="checkbox"/> Invasive plants cover less than 25% of the wetland area in each stratum of plants. 	1
<p><i>Note: The 20% stated in early printings of the manual on page 78 is an error.</i></p>		
<p>H 1. TOTAL Score - potential for providing habitat</p> <p>Add the scores from H1.1, H1.2, H1.3, H1.4, H1.5</p>		3
<p>Comments:</p>		

H 2. Does the wetland unit have the opportunity to provide habitat for many species?		Points
H 2.1	<p><u>Buffers</u> (<i>see p. 80</i>)</p> <p>Choose the description that best represents condition of buffer of wetland unit. The highest scoring criterion that applies to the wetland is to be used in the rating. See text for definition of "undisturbed."</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% of circumference. No structures are within undisturbed part of buffer (<i>relatively undisturbed also means no grazing, no landscaping, no daily human use</i>). Points = 5</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >50% of circumference. Points = 4</p> <p><input type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water >95% circumference. Points = 4</p> <p><input type="checkbox"/> 100 m (330 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >25% circumference. Points = 3</p> <p><input checked="" type="checkbox"/> 50 m (170 feet) of relatively undisturbed vegetated areas, rocky areas, or open water for >50% circumference. Points = 3</p> <p>If buffer does not meet any of the criteria above:</p> <p><input type="checkbox"/> No paved areas (except paved trails) or buildings within 25 m (80 feet) of wetland >95% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> No paved areas or buildings within 50 m of wetland for >50% circumference. Light to moderate grazing, or lawns are OK. Points = 2</p> <p><input type="checkbox"/> Heavy grazing in buffer. Points = 1</p> <p><input type="checkbox"/> Vegetated buffers are <2 m wide (6.6 feet) for more than 95% of the circumference (e.g., tilled fields, paving, basalt bedrock extend to edge of wetland). Points = 0</p> <p><input type="checkbox"/> Buffer does not meet any of the criteria above. Points = 1</p>	3
Aerial photo showing buffers		Figure __
H 2.2	<u>Corridors and Connections</u> (<i>see p. 81</i>)	
H 2.2.1	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (riparian or upland) at least 150 feet wide, has at least 30% cover of shrubs, forest, or native undisturbed prairie, that connects to estuaries, other wetlands, or undisturbed uplands that are at least 250 acres in size? (<i>Dams in riparian corridors, heavily used gravel roads, and paved roads are considered breaks in the corridor.</i>)</p> <p>YES = 4 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.2</i></p>	
H 2.2.2	<p>Is the wetland part of a relatively undisturbed/unbroken vegetated corridor (either riparian or upland) at least 50 feet wide, has at least 30% cover of shrubs or forest, and connects to estuaries, other wetlands, or undisturbed uplands that are at least 25 acres in size OR a Lake-fringe wetland, if it does not have an undisturbed corridor as in the question above?</p> <p>YES = 2 points (<i>go to H 2.3</i>) NO = <i>go to H 2.2.3</i></p>	2
H 2.2.3	<p>Is the wetland:</p> <p><input type="checkbox"/> within 5 miles (8 km) of a brackish or salt water estuary OR</p> <p><input type="checkbox"/> within 3 miles of a large field or pasture > 40 acres in size OR</p> <p><input type="checkbox"/> within 1 mile of a lake greater than 20 acres in size?</p> <p>YES = 1 point NO = 0 points</p>

5

H 2.3	Near or Adjacent to Other Priority Habitats Listed by WDFW (<i>see p. 82</i>)	Points
	<p>Which of the following priority habitats are within 330 feet (100 m) of the wetland unit? <i>NOTE: the connections do not have to be relatively undisturbed. These are DFW definitions. Check with your local DFW biologist if there are any questions</i></p> <ul style="list-style-type: none"> <input type="checkbox"/> Aspen stands: Pure or mixed stands of aspen >0.4 ha (1 acre). <input type="checkbox"/> Biodiversity Areas and Corridors: Areas of habitat that are relatively important to various species of native fish and wildlife (<i>full descriptions in WDFW PHS report p. 152</i>). <input type="checkbox"/> Herbaceous Balds: Variable size patches of grass and forbs on shallow soils over bedrock. <input checked="" type="checkbox"/> Old-growth/Mature forests:(Old-growth west of Cascade crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 20 trees/ha (8 trees/acre) > 81 cm (32 in) dbh or > 200 years of age. (Mature forests) Stands with average diameters exceeding 53 cm (21 in) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80 - 200 years old west of the Cascade crest. <input type="checkbox"/> Oregon white Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is 25% (<i>full descriptions in WDFW PHS report p. 158</i>). <input type="checkbox"/> Riparian: The area adjacent to aquatic systems with flowing water that contains elements of both aquatic and terrestrial ecosystems which mutually influence each other. <input type="checkbox"/> Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie (<i>full descriptions in WDFW PHS report p. 161</i>). <input type="checkbox"/> Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. <input type="checkbox"/> Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coastal Nearshore, and Puget Sound Nearshore. (<i>full descriptions of habitats and the definition of relatively undisturbed are in WDFW report pp. 167-169 and glossary in Appendix A</i>). <input type="checkbox"/> Caves: Naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human. <input type="checkbox"/> Cliffs: Greater than 7.6 m (25 ft) high and occurring below 5,000 ft. <input type="checkbox"/> Talus: Homogenous areas of rock rubble ranging in average size 0.15 - 2.0 m (0.5 - 6.5 ft), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs. <input checked="" type="checkbox"/> Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 51 cm (20 in) in western Washington and are > 2 m (6.5 ft) in height. Priority logs are > 30 cm (12 in) in diameter at the largest end, and > 6 m (20 ft) long. <p>If wetland has: 3+ priority habitats = 4 points 1 priority habitat = 1 point 2 priority habitats = 3 points No habitats = 0 points</p> <p>Note: all vegetated wetlands are by definition a priority habitat but are not included in this list. Nearby wetlands are addressed in question H 2.4</p>	<p>3</p>

H2.4	Wetland Landscape (<i>see p. 84</i>) Choose the one description of the landscape around the wetland that best fits.	Points
	<input checked="" type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, and the connections between them are relatively undisturbed (light grazing between wetlands OK, as is lake shore with some boating, but connections should NOT be bisected by paved roads, fill, fields, or other development). Points = 5	5
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with little disturbance and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 5	
	<input type="checkbox"/> There are at least 3 other wetlands within 1/2 mile, BUT the connections between them are disturbed. Points = 3	
	<input type="checkbox"/> The wetland is Lake-fringe on a lake with disturbance, and there are 3 other Lake-fringe wetlands within 1/2 mile. Points = 3	
	<input type="checkbox"/> There is at least 1 wetland within 1/2 mile. Points = 2	
	<input type="checkbox"/> There are no wetlands within 1/2 mile. Points = 0	
H 2. TOTAL Score - opportunity for providing habitat <i>Add the scores from H2.1, H2.2, H2.3, H2.4</i>		13
Total Score for Habitat Functions - add the points for H1 and H2, and record the result on p. 1		16

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Please determine if the wetland meets the attributes described below and choose the appropriate answers and Category.

Wetland Type <i>Check off any criteria that apply to the wetland. Check the appropriate Category when the appropriate criteria are met.</i>	Category
SC 1.0 <u>Estuarine Wetlands</u> (see p. 86) Does the wetland unit meet the following criteria for Estuarine wetlands? <div style="margin-left: 20px;"> <input type="checkbox"/> The dominant water regime is tidal, <input type="checkbox"/> Vegetated, and <input type="checkbox"/> With a salinity greater than 0.5 ppt. <input type="checkbox"/> YES = <i>Go to SC 1.1</i> <input checked="" type="checkbox"/> NO - not an estuarine wetland </div>	
SC 1.1 Is the wetland unit within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park, or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151? <div style="margin-left: 20px;"> <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO = <i>Go to SC 1.2</i> </div>	
SC 1.2 Is the wetland unit at least 1 acre in size and meeting at least two of the following three conditions? <div style="margin-left: 20px;"> <input type="checkbox"/> The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing, and has <10% cover of non-native plant species. If the non-native <i>Spartina</i> spp. are the only species that cover >10% of the wetland, then the wetland should be given a dual rating (I/II). The area of <i>Spartina</i> would be rated a Category II while the relatively undisturbed upper marsh with native species would be a Category I. Do not, however, exclude the area of <i>Spartina</i> in determining the size threshold of 1 acre. <input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland. <input type="checkbox"/> The wetland has at least two of the following features: tidal channels, depressions with open water, or contiguous freshwater wetlands. <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not an estuarine wetland </div>	

<p>SC 2.0 <u>Natural Heritage Wetlands</u> (see p. 87) Natural Heritage wetlands have been identified by the Washington Natural Heritage Program/DNR as either high quality undisturbed wetlands or wetlands that support state Threatened, Endangered, or Sensitive plant species.</p> <p>SC 2.1 Is the wetland unit being rated in a Section/Township/Range that contains a Natural Heritage wetland? (This question is used to screen out most sites before you need to contact WNHP/DNR.)</p> <p>S/T/R information from Appendix D <input checked="" type="checkbox"/> or accessed from WNHP/DNR web site <input type="checkbox"/> <input type="checkbox"/> YES - contact WNHP/DNR (see p. 79) and go to SC 3.2 <input checked="" type="checkbox"/> NO</p> <p>SC 2.2 Has DNR identified the wetland as a high quality undisturbed wetland or as a site with state Threatened or Endangered plant species? <input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a Heritage wetland</p>	<p>Category</p>
<p>SC 3.0 <u>Bogs</u> (see p. 87) Does the wetland unit (or any part of the unit) meet both the criteria for soils and vegetations in bogs? <i>Use the key below to identify if the wetland is a bog. If you answer Yes, you will still need to rate the wetland based on its function.</i></p> <p>1. Does the unit have organic soil horizons (i.e., layers of organic soil), either peats or mucks, that compose 16 inches or more of the first 32 inches of the soil profile? (See Appendix B for a field key to identify organic oils.) <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - go to Q. 2</p> <p>2. Does the unit have organic soils, either peats or mucks, that are <16 inches deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on a lake or pond? <input type="checkbox"/> YES - go to Q. 3 <input checked="" type="checkbox"/> NO - not a bog for purpose of rating</p> <p>3. Does the unit have more than 70% cover of mosses at ground level, AND other plants, if present, consist of the "bog" species listed in Table 3 as a significant component of the vegetation (>30% of total shrub and herbaceous cover consists of species in Table 3)? <input type="checkbox"/> YES - is a bog for purpose of rating <input type="checkbox"/> NO - go to Q. 4 NOTE: If you are uncertain about the extent of mosses in the understory you may substitute that criterion by measuring the pH of the water that seeps into a hole dug at least 16" deep. If the pH is less than 5.0 and the "bog" plant species in Table 3 are present, the wetland is a bog.</p> <p>4. Is the unit forested (>30% cover) with sitka spruce, subalpine fir, western redcedar, western hemlock, lodgepole pine, quaking aspen, Englemann's spruce, or western white pine, WITH any of the species (or combination of species) on bog species plant list in Table 3 as a significant component of the ground cover (>30% coverage of total shrub/herbaceous cover)? <input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a bog for purpose of rating</p>	

Category	
<p>SC 4.0 Forested Wetlands (<i>see p. 90</i>)</p> <p>Does the wetland unit have at least 1 acre of forest that meets one of these criteria for the Department of Fish and Wildlife's forests as priority habitat? <i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p><input type="checkbox"/> Old-growth forests: (west of Cascade Crest) Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/acre (20/hectare) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 inches (81 cm) or more.</p> <p style="padding-left: 40px;">NOTE: The criterion for dbh is based on measurements for upland forests. 200-year-old trees in wetlands will often have a smaller dbh because their growth rates are often smaller. The DFW criterion is an "OR" so old-growth forests do not necessarily have to have trees of this diameter.</p> <p><input type="checkbox"/> Mature forests: (west of the Cascade Crest) Stands where the largest trees are 80 - 200 years old OR have average diameters (dbh) exceeding 21 inches (53 cm); crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth.</p> <p><input type="checkbox"/> YES = Category I <input checked="" type="checkbox"/> NO - not a forested wetland w/ special characteristics</p>	
<p>SC 5.0 Wetlands in Coastal Lagoons (<i>see p. 91</i>)</p> <p>Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?</p> <p style="padding-left: 40px;">The wetland lies in a depression adjacent to marine waters that is wholly or partially</p> <p><input type="checkbox"/> separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks.</p> <p><input type="checkbox"/> The lagoon in which the wetland is located contains surface water that is saline or brackish (>.5 ppt) during most of the year in at least a portion of the lagoon (<i>needs to be measured near the bottom</i>).</p> <p><input type="checkbox"/> YES = go to SC 5.1 <input checked="" type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	
<p>SC 5.1 Does the wetland meet all of the following 3 conditions?</p> <p style="padding-left: 40px;">The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of invasive plant species (see list of invasive species on p. 74).</p> <p><input type="checkbox"/> At least 3/4 of the landward edge of the wetland has a 100 foot buffer of shrub, forest, or ungrazed or unmowed grassland.</p> <p><input type="checkbox"/> The wetland is larger than 1/10 acre (4,350 square feet).</p> <p><input type="checkbox"/> YES = Category I <input type="checkbox"/> NO - not a wetland in a coastal lagoon</p>	

<p>SC 6.0 Interdunal Wetlands (<i>see p. 93</i>)</p> <p>Is the wetland unit west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)?</p> <p><input type="checkbox"/> YES - <i>go to SC 6.1</i> <input checked="" type="checkbox"/> NO - not an interdunal wetland for rating</p> <p><i>If you answer Yes, you will still need to rate the wetland based on its functions.</i></p> <p>In practical terms, that means the following geographic areas:</p> <ul style="list-style-type: none"> • Long Beach Peninsula - lands west of SR 103 • Grayland-Westport - lands west of SR 105 • Ocean Shores-Copalis - lands west of SR 1115 and SR 109. <p>SC 6.1 Is wetland 1 acre or larger, or is it in a mosaic of wetlands that is 1 acre or larger?</p> <p><input type="checkbox"/> YES = Category II <input type="checkbox"/> NO - <i>go to SC 6.2</i></p> <p>SC 6.2 Is the unit between 0.1 and 1 acre, or is it in a mosaic of wetlands that is between 0.1 and 1 acre?</p> <p><input type="checkbox"/> YES = Category III</p>	<p>Category</p>
<p>Category of wetland based on Special Characteristics</p> <p>Choose the "highest" rating if wetland falls into several categories, and record on p. 1.</p> <p>If you answered NO for all types, enter "Not Applicable" on p. 1.</p>	<p>N/A</p>

Appendix E. Wetland Functional Assessment Summaries

Wetland Functions and Values Form

Wetland I.D. Wetland 1 Project: SR 18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: I Local Rating: I Wetland size: 0.79 acre Date: 10/22/12

Function/Value	Occurrence		Rationale	Principal	
	Y	N		Function(s)	Comments
Flood Flow Alteration	X		Wetland has dense woody vegetation and seasonal ponding during storms to detain surface water.	Y	High. Wetland is a large size, and located in the headwaters of the Raging River.
Sediment Removal	X		Wetland is depressional, has dense vegetation, seasonal ponding, and intermittent outlet.	Y	High. Wetland has hummocky topography and is large to hold back sediments in the watershed.
Nutrient & Toxicant Removal	X		Wetland is depressional, has dense vegetation, seasonal ponding, an intermittent outlet, and soils with high organic matter content.	Y	High. Wetland has hummocky topography and is large to hold back nutrients and toxicants in the watershed.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream channel.		
Production of Organic Matter and its Export	X		Wetland has understory vegetation with an intermittent outlet.	Y	Moderate. The wetland floods releasing organic matter, but the outlet is intermittent. Function limited by an overstory dominance of conifers reducing organic inputs.
General Habitat Suitability	X		Wetland provides habitat for passerine birds, amphibians, small and large mammals. Wetland is mature forest.	Y	High. Wetland is connected to a large mature forested upland corridor that connects to other wetlands and Raging River.
Habitat for Aquatic Invertebrates	X		Wetland supports seasonal ponding with downed large woody debris (LWD).	Y	High. Wetland has hummocky terrain with habitat complexity in the understory. Wetland is large.
Habitat for Amphibians	X		Wetland supports seasonal ponding with downed LWD.	Y	Moderate. Habitat for adults, but no breeding habitat. Wetland has hummocky terrain with habitat complexity in understory.
Habitat for Wetland-Associated Mammals		X	Wetland does not support permanent ponding.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water component and mudflats.		
General Fish Habitat		X	Wetland is not directly connected to a fish bearing stream, and does not support fish habitat.		
Native Plant Richness	X		Wetland is mature forest with canopy, shrubs, herbaceous vegetation and moss inclusions.	Y	High. Wetland has greater than 19 native species and invasive species are present in less than 25% of the wetland.
Educational or Scientific Value		X	Wetland is mature forest and has diverse habitat; however, parking for a school bus and safe wetland access is limited.		
Uniqueness and Heritage	X		PHS species are not mapped in the wetland, but pileated woodpeckers, a PHS species were observed in adjacent wetland. Wetland is mature forest and Category I based on Special Characteristics. This Ecology rating system has been accepted by King County; therefore, wetland is unique.	Y	High. Wetland is a large mature forested wetland and likely provides habitat for PHS species of birds.

Wetland Functions and Values Form

Wetland I.D. Wetland 2

Project: SR18/I-90 Flyover Ramp

Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PEM

Ecology Category: II Local Rating: II Wetland size: 0.02 acre Date: 10/22/12

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland has some dense woody vegetation and a constricted outlet.	N	Low. Wetland function is limited due to small size.
Sediment Removal	X		Wetland is depressional, has dense vegetation, and a constricted outlet.	Y	Moderate. Wetland has dense herbaceous vegetation and a constricted outlet to trap sediments from surface water.
Nutrient & Toxicant Removal	X		Wetland is depressional, has dense vegetation, and a constricted outlet.	Y	Moderate. Wetland has dense herbaceous vegetation and a constricted outlet to trap nutrients and toxicants from surface water.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland outlets to a culvert draining to Stream1.	Y	Moderate. Vegetation dominated by <i>Carex obnupta</i> does not produce much organic matter but over hanging shrubs contribute some
General Habitat Suitability	X		Wetland provides habitat for invertebrates, amphibians, passerine birds, small mammals, and deer.	Y	Moderate. Wetland is connected to a large upland forested corridor that connects to other wetlands and Raging River. Function limited by wetland size.
Habitat for Aquatic Invertebrates	X		Wetland has seasonal ponding and dense vegetation.	Y	Moderate. Wetland has downed LWD and a constricted outlet increasing function during storms.
Habitat for Amphibians	X		Wetland is densely vegetated with <i>Carex obnupta</i> and seasonally ponded.	Y	Moderate. Wetland supports breeding habitat, has LWD, and is connected to a forested upland corridor and other wetlands.
Habitat for Wetland-Associated Mammals		X	Wetland does not have permanent inundation.		
Habitat for Wetland-Associated Birds		X	Wetland does not support an open water component.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness	X		Wetland supports herbaceous and shrub species.	Y	Moderate. Wetland has at least five native species and no invasive species in the wetland.
Educational or Scientific Value		X	Wetland is small and parking for a school bus inadequate.		
Uniqueness and Heritage		X	PHS species are not mapped in the wetland, and it's not designated as unique or significant in King County.		

Wetland Functions and Values Form

Wetland I.D. Wetland 3 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: I Local Rating: I Wetland size: 0.39 acre Date: 10/22/12

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland has dense woody vegetation and seasonal ponding during storms to detain surface water.	Y	High. Wetland is large and located in the headwaters of the Raging River.
Sediment Removal	X		Wetland is depressional, has dense vegetation, seasonal ponding, and no outlet.	Y	High. Wetland in vicinity of SR 18, receives overland flow of surface water during storms, and has no outlet.
Nutrient & Toxicant Removal	X		Wetland is a closed depression, has dense vegetation, seasonal ponding, and soils with high organic matter content.	Y	High. Wetland in vicinity of SR 18, receives overland flow of surface water during storms, and has no outlet.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream channel.		
Production of Organic Matter and its Export		X	Wetland does not have an outlet.		
General Habitat Suitability	X		Wetland provides habitat for passerine birds, amphibians, small and large mammals.	Y	High. Wetland is forested and connected to forested upland habitat and other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland supports seasonal ponding with downed large woody debris (LWD). Other streams and wetlands present nearby with forested connections between them.	Y	Moderate. Wetland has habitat complexity but function is limited by wetland size and lack of varying water regimes.
Habitat for Amphibians	X		Wetland supports seasonal ponding with downed LWD. Other streams and wetlands present nearby with forested connections between them.	Y	Moderate. Habitat for adults, but no breeding habitat. Wetland has hummocky terrain with habitat complexity in understory.
Habitat for Wetland-Associated Mammals		X	Wetland does not support permanent ponding.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water component.		
General Fish Habitat		X	Wetland does not support fish bearing stream.		
Native Plant Richness	X		Wetland is forested with some areas supporting a canopy with a well-developed understory of shrubs, herbs, and moss species.	Y	Moderate. Wetland has at least 15 native plant species and invasive species are present are less than 25% of the wetland.
Educational or Scientific Value		X	Wetland has diverse habitat; however, parking for a school bus and safe wetland access is limited due to the busy highway and lack of parking facilities.		
Uniqueness and Heritage	X		Wetland is Category I and a PHS species, pileated woodpecker observed very close to wetland.	Y	Moderate. Wetland function somewhat limited by size and habitat function.

Wetland Functions and Values Form

Wetland I.D. Wetland 4

Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO

Ecology Category: I Local Rating: I

Wetland size: 6.45 acres Date: 10/22/12

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland is dominated by woody species receives flood overflow from Lake Creek and stormwater inputs.	Y	High. Wetland is large, high in the watershed of Raging River and has storm inputs from multiple sources.
Sediment Removal	X		Wetland has dense vegetation and receives stormwater runoff.	Y	High. Wetland is large, has undulating topography, and LWD to trap sediments from runoff. Receives runoff from multiple sources.
Nutrient & Toxicant Removal	X		Wetland is depressional, has dense vegetation, seasonal ponding, an intermittent outlet, and soils with high organic matter content.	Y	High. Wetland is large, has undulating topography, and LWD to trap nutrients and toxicant removal.
Erosion Control & Shoreline Stabilization	X		Wetland is directly associated with Lake Creek.	Y	Moderate. Function limited by SR 18 next to wetland/stream buffer and culvert constricting flows under the highway, changing hydraulics of the creek.
Production of Organic Matter and its Export	X		Wetland supports dense deciduous woody vegetation with some understory herbaceous species and has multiple outlets.	Y	High. Wetland is large, has high input of organic matter and multiple outlets.
General Habitat Suitability	X		Wetland provides habitat for fish, wetland mammals, amphibians, large and small land mammals, and passerine birds.	Y	High. Wetland is large, has multiple hydroperiods, forested habitat with understory and buffer is connected to mature forested upland and other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland has seasonal ponding, receives flood overflows from a stream, and habitat complexity.	Y	High. Wetland has multiple hydroperiods, LWD, and is large.
Habitat for Amphibians	X		Wetland has seasonal ponding and an understory of herbaceous species.	Y	Moderate. Wetland has habitat complexity and is large in size, but function limited by lack of well-developed emergent habitat.
Habitat for Wetland-Associated Mammals	X		Wetland supports woody species along Lake Creek.	Y	Moderate. Buffer is reduced near SR 18 and some portions of wetland are scrub shrub.
Habitat for Wetland-Associated Birds		X	Wetland lacks open water, lacks aquatic bed habitat, and has low cover of herbaceous species.		
General Fish Habitat	X		Fish are documented in Lake Creek.	Y	Moderate. Lake Creek receives large amounts of stormwater runoff and sediment, limiting quality of fish habitat.
Native Plant Richness	X		Wetland is forested with developed understory and greater than 19 native species.	Y	High. Wetland is large and invasive species cover a low portion of the wetland
Educational or Scientific Value		X	Wetland lacks safe parking for a school bus and is not easily accessible.		
Uniqueness and Heritage	X		Wetland is directly associated with Lake Creek, which provides habitat for priority species of salmonids and potentially for ESA Threatened species of salmonids. Category I mature forested.	Y	High. Lake Creek receives stormwater runoff from multiple inputs and is not designated as unique in its local jurisdiction.

Wetland Functions and Values Form

Wetland I.D. Wetland 5 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PSS/PEM Ecology Category: III Local Rating: III Wetland size: 0.10 acre Date: 10/22/12

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland receives surface water runoff from upslope maintenance yard. Wetland has small depressions to retain runoff. Water sheetflows out of wetland across access road flowing to ditch draining to Lake Creek.	N	Moderate. Function limited due to wetland on slope, un constricted outlet and small wetland size.
Sediment Removal	X		Wetland is on a gentle slope, but has dense vegetation and surface depressions to trap sediments.	Y	High. Sediment inputs are high from WSDOT maintenance yard.
Nutrient & Toxicant Removal	X		Wetland is on a gentle slope, but has dense vegetation and surface depressions to trap nutrients and toxicants.	Y	High. Inputs are high from WSDOT maintenance yard.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland supports emergent vegetation and outlets at the base of a slope.	N	Low. Wetland is small and inputs relatively low.
General Habitat Suitability	X		Wetland supports two Cowardin classes and has seasonal ponding. Provides habitat for passerine birds, small mammals, and aquatic invertebrates.	Y	Low. Wetland has some habitat diversity and is located in the vicinity of upland forest and other wetlands, however, function limited by impacted buffer, surrounding WSDOT maintenance yard, and small wetland size.
Habitat for Aquatic Invertebrates	X		Wetland supports two Cowardin classes and has seasonal ponding.	Y	Moderate. Wetland has habitat diversity and is located in the vicinity of upland forest and other wetlands. Function limited by impacted buffer and small wetland size.
Habitat for Amphibians	X		Wetland has seasonal ponding and emergent vegetation.	N	Low. Wetland supports shallow ponding but has very high sediment inputs that likely preventing successful breeding habitat.
Habitat for Wetland-Associated Mammals		X	Wetland does not support open water.		
Habitat for Wetland-Associated Birds		X	Wetland does not have an open water component or mudflats.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness	X		Wetland supports two Cowardin classes.	Y	Moderate. Wetland has at least 7 native species, but some reed canarygrass is present in about 10 percent of the wetland.
Educational or Scientific Value		X	Wetland is located on WSDOT property so not open to the public. Wetland provides minimal habitat and function, so lacks significant educational value.		
Uniqueness and Heritage		X	Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 6 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PSS Ecology Category: III Local Rating: III Wetland size: 0.05 acre Date: 10/22/2012

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland has dense woody vegetation and slope is 1-2%.	Y	Moderate. Wetland receives overland flow of surface water runoff.
Sediment Removal	X		Wetland has dense vegetation and surface depressions to trap sediment.	Y	Moderate. Wetland receives overland flow of surface water runoff.
Nutrient & Toxicant Removal	X		Wetland has dense vegetation and surface depressions to trap nutrients and toxicants.	Y	Moderate. Wetland receives overland flow of surface water runoff.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland outlets at base of slope, and has deciduous vegetation.	N	Low. Function limited by small wetland size and lack of understory herbaceous vegetation development in wetland.
General Habitat Suitability	X		Wetland supports shrubs and has shallow surface ponding. Wetland provides habitat for passerine birds and small mammals.	Y	Moderate. Portions of wetland buffer connect to forested uplands, other wetlands, and a stream.
Habitat for Aquatic Invertebrates	X		Wetland has woody species and seasonal ponding.	N	Low. Wetland is small and ponding shallow.
Habitat for Amphibians		X	Wetland lacks emergent wetland component and ponding is very shallow.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness		X	Wetland only supports one Cowardin class.		
Educational or Scientific Value		X	Wetland has low habitat value and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 7 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PEM Ecology Category: III Local Rating: III Wetland size: 0.01 acre Date: 10/22/2012

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland is a depression and supports some woody vegetation. Wetland receives overland flow of surface water flooding during heavy storms.	Y	Moderate. Wetland receives overland flow of surface water runoff.
Sediment Removal	X		Wetland is a depression and has dense vegetation to trap sediments.	Y	Moderate. Sediment inputs are high from overland flow of surface water and polluted stormwater.
Nutrient & Toxicant Removal	X		Wetland is a depression and has dense vegetation to trap nutrients and toxicants.	Y	Moderate. Inputs are high from overland flow of surface water and polluted stormwater.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland supports emergent vegetation and outlets intermittently across a wide distance.	N	Low. Wetland inputs are low and outlet is intermittent. Function limited by small size.
General Habitat Suitability	X		Wetland supports dense vegetation and has seasonal ponding. Wetland provides minimal habitat for passerine birds and small mammals.	Y	Moderate. Wetland has ponding and intact buffers that connect to other wetlands and a stream.
Habitat for Aquatic Invertebrates	X		Wetland has dense vegetation and seasonal ponding.	Y	Moderate. Wetland is depression with ponding and intact buffers connect to other wetlands and a stream.
Habitat for Amphibians	X		Wetland has dense emergent vegetation and seasonal ponding.	N	Low. Wetland is depression with ponding and intact buffers connect to other wetlands and a stream. Function limited by small size and pollution (stormwater inputs).
Habitat for Wetland-Associated Mammals		X	Wetland lacks an open water component.		
Habitat for Wetland-Associated Birds		X	Wetland lacks an open water component.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness		X	Wetland has only one Cowardin class and Scotts broom present in wetland.		
Educational or Scientific Value		X	Wetland has low habitat value and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 8 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: III Local Rating: III Wetland size: 0.07 acre Date: 11/18/2012

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland is a depression and supports some woody vegetation. Wetland receives overland flow of surface water and stormwater during heavy storms.	Y	High. Wetland is high in the watershed and receives stormwater from I-90. Wetland impounds significant amounts of surface water for long periods despite its small size.
Sediment Removal	X		Wetland is a depression and has dense vegetation to trap sediments.	Y	Moderate. Sediment inputs are moderate from upland forest and roadside runoff. Ponding is to 2 feet deep. Function limited by small wetland size.
Nutrient & Toxicant Removal	X		Wetland is a depression and has dense vegetation to trap nutrients and toxicants.	Y	High. Stormwater runoff from SE 104 th St. drains directly to wetland. Ponding is to 2 feet deep and is present for long periods. Function limited by small wetland size.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland has dense herbaceous vegetation, deciduous trees and an outlet.	Y	Moderate. Ditch outlet drains to a seasonal stream.
General Habitat Suitability	X		Wetland supports dense vegetation and has seasonal ponding. Wetland provides minimal habitat for passerine birds and small mammals.	Y	Moderate. Wetland has ponding and intact buffers that connect to other wetlands and a stream.
Habitat for Aquatic Invertebrates	X		Wetland has dense vegetation and seasonal ponding.	Y	Moderate. Wetland is depression with ponding and intact buffers connect to other wetlands and a stream.
Habitat for Amphibians	X		Wetland has dense vegetation and seasonal ponding.	N	Low. Wetland is depression with ponding and intact buffers connect to other wetlands and a stream. Function limited by small size and pollution (stormwater inputs).
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland lacks fish habitat.		
Native Plant Richness	X		Wetland has overstory of forest with understory of shrubs and herbaceous vegetation.	N	Low. Wetland has only one Cowardin Class and Himalayan blackberry.
Educational or Scientific Value		X	Wetland has low habitat value and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 9 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: III Ecology Category: III Local Rating: III Wetland size: 0.03 acre Date: 11/18/2012

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland is densely vegetated with woody species and drains to a seasonal stream. Wetland receives runoff during heavy storms.	Y	Moderate. Wetland is high in the watershed and receives stormwater from I-90. Function limited by small wetland size.
Sediment Removal	X		Wetland is a slope, but is densely vegetated and has surface depressions to trap sediments.	Y	Moderate. Wetland is down slope from I-90 and other wetlands that also contribute surface flows through this wetland. Function limited by small wetland size.
Nutrient & Toxicant Removal	X		Wetland is a slope, but is densely vegetated and has surface depressions to trap nutrients and toxicants.	Y	Moderate. Wetland is down slope from I-90 and other wetlands in similar landscape position below I-90, that contribute surface flows through this wetland. Function limited by small wetland size.
Erosion Control & Shoreline Stabilization	X		Wetland drains to a ditch connecting to a seasonal stream.	N	Low. Wetland is not directly connected to stream bank. Function limited by small wetland size. Ditch outlet has some erosion.
Production of Organic Matter and its Export	X		Wetland is densely vegetated and outlets to a ditch at the base of its slope.	N	Low. Function limited by small wetland size.
General Habitat Suitability	X		Wetland supports dense vegetation and has seasonal ponding. Wetland provides minimal habitat for passerine birds, small mammals, and aquatic invertebrates.	N	Low. Wetland bound by a fence on southern side limited movement of wildlife. Function limited by small wetland size.
Habitat for Aquatic Invertebrates	X		Wetland has dense vegetation and seasonal ponding.	N	Low. Ponding is shallow and runoff polluted. Function limited further by small wetland size.
Habitat for Amphibians		X	Seasonal ponding is shallow and polluted. No breeding habitat present.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Fish do not have access to the wetland.		
Native Plant Richness	X		Wetland is dominated by shrubs with an understory of herbaceous species.	N	Low. Wetland has only one Cowardin class, but no invasive species noted. Function limited by wetland size and lack of habitat complexity.
Educational or Scientific Value		X	Wetland is on WSDOT ROW and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 10 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: III Local Rating: III Wetland size: 0.90 acre Date: 11/18/2012

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland has dense woody vegetation and receives overland flow of surface runoff in heavy storms.	Y	Moderate. Wetland is high in the watershed and receives stormwater from I-90. Function limited by shallow ponding in wetland.
Sediment Removal	X		Wetland has dense herbaceous vegetation and seasonal ponding.	Y	High. Wetland has surface depressions to trap sediment and high inputs from stormwater.
Nutrient & Toxicant Removal	X		Wetland has dense herbaceous vegetation and seasonal ponding.	Y	High. Wetland has surface depressions to trap sediment and high inputs from stormwater.
Erosion Control & Shoreline Stabilization	X		Wetland drains to a seasonal stream.	N	Low. Stream is ditched and adjacent to a roadway.
Production of Organic Matter and its Export	X		Wetland has herbaceous vegetation and an outlet.	N	Low. Outlet is a highly constricted culvert.
General Habitat Suitability	X		Wetland has forested vegetation and seasonal ponding. Provides habitat for passerine birds, small mammals, and amphibians.	Y	Moderate. Wetland has buffer that connects to other wetlands. Function limited by high stormwater inputs.
Habitat for Aquatic Invertebrates	X		Wetland has forested overstory with shrub and herbaceous understory. Wetland has seasonal flooding.	Y	Moderate. Function limited by polluted stormwater inputs and shallow ponding.
Habitat for Amphibians	X		Wetland has forested overstory with shrub and herbaceous understory. Wetland has seasonal flooding.	N	Low. Low potential for breeding habitat. Function limited by polluted stormwater inputs and shallow ponding.
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not provide fish habitat.		
Native Plant Richness	X		Wetland has overstory of forest with understory of shrubs and herbaceous vegetation.	N	Low. Wetland has only one Cowardin class and supports Scott's broom and Himalayan blackberry.
Educational or Scientific Value		X	Wetland is on WSDOT ROW and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland Functions and Values Form

Wetland I.D. Wetland 12 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: II Local Rating: II Wetland size: 0.11 acre Date: 11/18/2012

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland has dense woody vegetation and receives overland flow of surface runoff in heavy storms.	Y	Moderate. Wetland is high in the watershed and receives stormwater from I-90. Function limited by shallow ponding in wetland.
Sediment Removal	X		Wetland has dense herbaceous vegetation and seasonal ponding.	Y	High. Wetland has surface depressions to trap sediment and high inputs from stormwater.
Nutrient & Toxicant Removal	X		Wetland has dense herbaceous vegetation and seasonal ponding.	Y	High. Wetland has surface depressions to trap sediment and high inputs from stormwater.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland has dense herbaceous vegetation, deciduous trees, and outlets to a ditch.	Y	Moderate. Wetlands outlets to a ditch. Function limited by smaller size of wetland.
General Habitat Suitability	X		Wetland has forested vegetation with understory and seasonal ponding. Provides limited habitat for passerine birds, small mammals, and amphibians.	Y	Low. Habitat connectivity is extremely limited as the wetland is confined on one side by I-90 and the ROW fence on the other. Function limited by high stormwater inputs.
Habitat for Aquatic Invertebrates	X		Wetland has forested overstory with shrub and herbaceous understory. Wetland has seasonal flooding.	Y	Moderate. Function limited by polluted stormwater inputs and shallow ponding.
Habitat for Amphibians	X		Wetland has forested overstory with shrub and herbaceous understory. Wetland has seasonal flooding.	N	Low. Function limited by high inputs of polluted stormwater.
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness	X		Wetland has overstory of forest with understory of shrubs and herbaceous vegetation.	N	Low. Wetland has only one Cowardin class and is small size.
Educational or Scientific Value		X	Wetland is on WSDOT ROW and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland mapped as habitat for elk, a Priority species, but wetland does not provide watering hole or forested habitats for this species. Wetland does not support habitat for ESA listed, PHS, or other locally significant species. Wetland is not designated as unique under local ordinances.		

Wetland Functions and Values Form

Wetland I.D. Wetland 13 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO Ecology Category: II Local Rating: II Wetland size: 0.16 acre Date: 9/18/12

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland densely vegetated with woody species and has no outlet and seasonal ponding.	Y	High. Wetland located high in the watershed with downstream resources.
Sediment Removal	X		Wetland densely vegetated, seasonal ponding, and constricted outlet.	Y	Low. Wetland has constricted outlet. Function limited by low inputs due to forested buffers.
Nutrient & Toxicant Removal	X		Wetland densely vegetated, seasonal ponding, and constricted outlet.	Y	Low. Wetland has a constricted outlet. Function limited by low inputs due to forested buffers that do not receive stormwater runoff from roadways.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export		X	Wetland has constricted outlet.		Low. Does not have opportunity to export to downstream habitats.
General Habitat Suitability	X		Wetland is forested with developed understory with seasonal ponding. Wetland provides habitat for passerine birds, small mammals, amphibians, and deer.	Y	High. Wetland has seasonal ponding and forested buffers that connect to other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland has dense vegetation and seasonal ponding.	Y	High. Wetland has habitat complexity and forested buffers.
Habitat for Amphibians	X		Wetland has dense vegetation and seasonal ponding.	Y	Moderate. Potential for breeding habitat due to emergent species, habitat complexity, and intact forested buffers.
Habitat for Wetland-Associated Mammals		X			
Habitat for Wetland-Associated Birds		X			
General Fish Habitat		X			
Native Plant Richness	X		Wetland is forested with a developed understory. Does not support a dominance of invasive species.	Y	Moderate. Wetland dominated by native species with native forested buffers.
Educational or Scientific Value		X	Wetland is on private property, is not very accessible, and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is small and not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 14 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO/PSS Ecology Category: II Local Rating: II Wetland size: 0.23 acre Date: 9/18/2012

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland is densely vegetated with woody species and has seasonal flooding.	Y	High. Wetland is high in the watershed. Closed depression at bottom of slope allows for high volumes of water retention.
Sediment Removal	X		Wetland is densely vegetated with woody and herbaceous species and has seasonal ponding without an outlet.	N	Moderate. Depressional portion of wetland receives stormwater and has ponding to trap sediments.
Nutrient & Toxicant Removal	X		Wetland is densely vegetated with woody and herbaceous species and has seasonal ponding without an outlet.	N	Low. Wetland has potential to perform this function but inputs are not present as stormwater comes from upland forest areas
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export		X	Wetland has no outlet to export organic matter.		
General Habitat Suitability	X		Wetland has two Cowardin classes, seasonal ponding. Wetland provides habitat for passerine birds, small mammals, amphibians, and deer.	Y	High. Wetland has seasonal ponding and forested buffers that connect to other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland is densely vegetated with seasonal ponding.	Y	High. Wetland has habitat complexity and forested buffers.
Habitat for Amphibians	X		Wetland is densely vegetated with seasonal ponding. Wetland understory developed with emergent species.		Low. Portion of wetland with deeper ponding is polluted and lacks understory development of herbaceous species. No breeding habitat.
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not support a stream.		
Native Plant Richness	X		Wetland has two Cowardin classes and developed understory.	Y	Moderate. Native species dominate wetland; buffer has some Himalayan blackberry.
Educational or Scientific Value		X	Wetland is on private property, is not very accessible, and does not have safe parking for a school bus.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is small and not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 15 Project: SR18/I-90 Flyover Ramp

Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PSS Ecology Category: III Local Rating: III Wetland size: 0.04 acre

Date: 9/24/2012

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland has dense woody vegetation and is upslope of ditches, roadway, and other wetlands. Wetland has small surface depressions to trap surface runoff.	N	Low. Function limited by small size. Runoff inputs are low, as upstream areas are forested.
Sediment Removal	X		Wetland has dense vegetation and small surface depressions to trap surface runoff.	N	Low. Function limited by small size. Runoff inputs are low, as upstream areas are forested.
Nutrient & Toxicant Removal	X		Wetland has dense vegetation and small surface depressions to trap nutrients and toxicants.	N	Low. Function limited by small size. Runoff inputs are low, as upstream areas are forested.
Erosion Control & Shoreline Stabilization		X	Wetland is not directly associated with a stream.		
Production of Organic Matter and its Export	X		Wetland is densely vegetated and outlets at the base of its slope to a ditch.	N	Low. Function limited by low input and small wetland size.
General Habitat Suitability	X		Wetland has seasonal flooding and dense vegetation. Provides habitat for passerine birds and small mammals.	Y	Moderate. Wetland has forested buffer with connection to other wetlands. Function limited by a fence north of wetland and its small size.
Habitat for Aquatic Invertebrates	X		Wetland has dense emergent vegetation and seasonal flooding.	N	Low. Wetland lacks habitat complexity and is limited by small size and shallow ponding.
Habitat for Amphibians		X	Emergent vegetation has low cover in wetland understory and seasonal ponding is very shallow.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness		X	Wetland has only one Cowardin class and Himalayan blackberry present in wetland vicinity.		
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is small and not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 16 Project: SR18/I-90 Flyover Ramp

Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PSS/PEM Ecology Category: III Local Rating: III Wetland size: 0.07 acre Date: 9/25/12

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland has dense woody vegetation and is upslope of ditches, roadway, and other wetlands. Wetland has small surface depressions to trap surface runoff.	N	Low. Function limited by small size. Runoff inputs are low, as upslope areas are forested.
Sediment Removal	X		Wetland has dense vegetation and small surface depressions to trap surface runoff.	N	Low. Function limited by small size. Runoff inputs are low, as upslope areas are forested.
Nutrient & Toxicant Removal	X		Wetland has dense vegetation and small surface depressions to trap nutrients and toxicants.	N	Low. Function limited by small size. Runoff inputs are low, as upslope areas are forested and runoff from I-90 only enters the lowest/ditched portion of the wetland.
Erosion Control & Shoreline Stabilization		X	Wetland is not associated with a stream.		
Production of Organic Matter and its Export	X		Wetland has dense herbaceous vegetation and outlets to a ditch.	N	Low. Organic inputs are low. Function limited by small wetland size.
General Habitat Suitability	X		Wetland has seasonal flooding and dense vegetation. Provides habitat for passerine birds and small mammals.	Y	Moderate. Wetland has forested buffer with connection to other wetlands. Function limited by a fence north of wetland and its small size.
Habitat for Aquatic Invertebrates	X		Wetland supports dense herbaceous vegetation and has seasonal flooding.	N	Low. Wetland has moderate interspersions, but lacking habitat complexity. Wetland located next to roadway.
Habitat for Amphibians	X		Wetland supports dense herbaceous vegetation and has seasonal flooding.	N	Low. Seasonal ponding is shallow and wetland located next to the road.
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland does not support fish habitat.		
Native Plant Richness	X		Wetland has two Cowardin classes.	N	Low. Wetland function limited by low habitat diversity and small wetland size.
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is small and not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 17 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PFO/PSS Ecology Category: III Local Rating: III Wetland size: 0.11 acre Date: 9/25/2012

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland has dense woody species to detain flood flows from upslope areas.	N	Low. Wetland is high in the watershed, but has signs of erosion in upper forested portion.
Sediment Removal	X		Wetland has dense vegetation and seasonal flooding. Wetland has surface depressions to trap sediment.	N	Low. Inputs are moderate, upslope areas are forested with little developments.
Nutrient & Toxicant Removal	X		Wetland has dense vegetation and seasonal flooding. Wetland has surface depressions to trap nutrients and toxicants.	N	Low. Inputs are moderate, upslope areas are forested with little developments.
Erosion Control & Shoreline Stabilization		X	Wetland is not associated with a stream.		
Production of Organic Matter and its Export	X		Wetland supports deciduous species of shrubs and herbaceous species in the understory and has an outlet.	N	Low. Upper portion of wetland dominated by conifers and outlet constricted.
General Habitat Suitability	X		Wetland has to Cowardin classes and seasonal flooding. Wetland provides habitat for passerine birds and small mammals.	Y	Moderate. Wetland has forested buffer with connection to other wetlands. Function limited by a fence in the middle of the wetland.
Habitat for Aquatic Invertebrates	X		Wetland supports dense vegetation and has seasonal flooding.	Y	Moderate. Wetland has some habitat complexity.
Habitat for Amphibians	X		Wetland supports dense vegetation and has seasonal flooding.	N	Low. Herbaceous vegetation in understory not well developed. No breeding habitat.
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland lacks fish habitat.		
Native Plant Richness	X		Wetland has two Cowardin classes.	Y	Moderate. Wetland understory is not well developed and Himalayan blackberry present on wetland margins.
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 18 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PEM Ecology Category: IV Local Rating: IV Wetland size: 0.14 acre Date: 9/24/12

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration		X	Wetland is on a very steep slope and lacks woody species.		
Sediment Removal	X		Wetland is densely vegetated and receives runoff from upslope areas.	N	Low. Sediment inputs are low, upslope areas are forested. Function limited by wetland size and steep slope.
Nutrient & Toxicant Removal	X		Wetland is densely vegetated and receives runoff from upslope areas.	N	Low. Toxicant/nutrient inputs are low, upslope areas are primarily forested. Function limited by wetland size and steep slope.
Erosion Control & Shoreline Stabilization		X	Wetland is not associated with a stream.		
Production of Organic Matter and its Export		X	Wetland is slope and dominated by equisetum.		
General Habitat Suitability	X		Wetland has dense vegetation and seasonal flooding from seeps. Provides minimal habitat for passerine birds and small mammals.	N	Low. Wetland lacks habitat complexity.
Habitat for Aquatic Invertebrates	X		Wetland has dense vegetation and seasonal flooding from seeps.	N	Low. Wetland lacks habitat complexity.
Habitat for Amphibians		X	Wetland is seasonally flooded by seeps, but lacks surface depressions for standing water.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland lacks fish habitat.		
Native Plant Richness		X	Wetland has one Cowardin class and low plant diversity. Wetland has Himalayan blackberry.		
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 19 Project: SR18/I-90 Flyover Ramp Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PSS Ecology Category: IV Local Rating: IV Wetland size: 0.05 acre Date: 9/25/12

Function/Value	Occurrence		Rationale	Principal Function(s)	Comments
	Y	N			
Flood Flow Alteration	X		Wetland floods and supports dense woody species.	N	Low. Wetland does not support surface depressions to hold back flood flows. Slope is steep.
Sediment Removal	X		Wetland is vegetated on a slope.	N	Low. Function limited by steep slope and lack of surface depressions.
Nutrient & Toxicant Removal	X		Wetland is vegetated on a slope.	N	Low. Function limited by steep slope and lack of surface depressions.
Erosion Control & Shoreline Stabilization		X	Wetland is not associated with a stream.		
Production of Organic Matter and its Export		X	Wetland supports deciduous shrubs, but outlets to a French drain.		
General Habitat Suitability	X		Wetland is densely vegetated and seasonally flooded. Provides habitat for passerine birds, deer and small mammals.	Y	Moderate. Buffers are mature forest that connects to other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland is vegetated with seasonal flooding.	N	Low. Wetland lacks surface depressions to trap water. Wetland lacks habitat complexity.
Habitat for Amphibians		X	Wetland is densely vegetated but understory not well developed and surface depressions are lacking.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland lacks fish habitat.		
Native Plant Richness		X	Wetland only supports scrub shrub Cowardin class.		
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is not designated in a local code and is not unique.		

Wetland Functions and Values Form

Wetland I.D. Wetland 20

Project: SR18/I-90 Flyover Ramp

Assessed by: Beth Toberer, Tatiana Dreisbach

Cowardin Class: PEM

Ecology Category: III

Local Rating: III

Wetland size: 0.22 acre

Date: 9/24/12

Function/Value	Occurrence Y N		Rationale	Principal Function(s)	Comments
Flood Flow Alteration	X		Wetland is densely vegetated with cattails and upslope of roadway, ditches and other wetlands.	N	Low. Wetland has moderate opportunity and function limited by lack of woody species and steep slopes with only small depressions.
Sediment Removal	X		Wetland is densely vegetated with herbaceous species. Ditch portion of wetland receives stormwater runoff.	Y	Low. Stormwater runoff drains to ditch portion of wetland. Inputs are low from seep and upslope areas. Function limited by small wetland size.
Nutrient & Toxicant Removal	X		Wetland is densely vegetated with herbaceous species. Ditch portion of wetland receives stormwater runoff.	Y	Low. Stormwater runoff drains to ditch portion of wetland. Inputs are low from seep and upslope areas. Function limited by small wetland size.
Erosion Control & Shoreline Stabilization		X	Wetland not associated with a stream.		
Production of Organic Matter and its Export	X		Wetland is densely vegetated and outlets at base of slope.	N	Low. Dominant emergent species is cattails. Organic inputs are low.
General Habitat Suitability	X		Wetland is densely vegetated with seasonal flooding. Wetland provides habitat for passerine birds and small mammals.	Y	Moderate. Intact wetland buffers are mature forest with connections to other wetlands.
Habitat for Aquatic Invertebrates	X		Wetland is densely vegetated with seasonal flooding.	Y	Moderate. Intact wetland buffers are mature forest with connections to other wetlands. Function limited by small wetland size and lack of complexity.
Habitat for Amphibians		X	Wetland is densely vegetated with seasonal flooding, but ponding is shallow and dominant species is cattails.		
Habitat for Wetland-Associated Mammals		X	Wetland lacks open water.		
Habitat for Wetland-Associated Birds		X	Wetland lacks open water.		
General Fish Habitat		X	Wetland lacks open water.		
Native Plant Richness		X	Wetland has one Cowardin class with low species diversity. Himalayan blackberry present in wetland buffer.		
Educational or Scientific Value		X	Adequate parking for a school is not located in the wetland vicinity.		
Uniqueness and Heritage		X	Wetland does not support PHS species or T&E species. Wetland is not designated in a local code and is not unique.		

Appendix H. Reverification Memo

January 20, 2022

TO: Nicole Evans, U.S. Army Corps of Engineers
Caroline Corcoran, Washington Department of Ecology

FROM: Alyson Rae, Northwest Region Environmental

SUBJECT: I-90/SR 18 Interchange to Deep Creek Interchange Improvements & Widening

This memorandum is intended to summarize and confirm changes to the 20 wetlands and five streams initially delineated and described in the *Wetland and Stream Assessment Report (WSAR)*, dated June 2013. Changes addressed here are specifically associated with the information in the 2013 report and the March 2021 *Wetland and Stream Assessment Report*, including any changes to the wetland ratings. Unless noted below, no changes were made to the wetland delineation or description. A summary of any changes, using the current name, is as follows:

Changes to Names, Boundaries, or Ratings – summary of changes:

LC-01: 0.79-acre, Category I¹

- Previously identified as Wetland 1 in the 2013 WSAR.

LC-02: 0.015-acre, Category II¹

- Previously identified as Wetland 2 in the 2013 WSAR.
- Area updated in 2021, previously 0.02-acre.
- Category updated in 2022, previously Category I wetland.

LC-03: 0.39-acre, Category I¹

- Previously identified as Wetland 3 in the 2013 WSAR.

LC-04: 6.45 acres, Category I¹

- Previously identified as Wetland 4 in the 2013 WSAR.

LC-05: 0.10-acre, Category III¹

- Previously identified as Wetland 5 in the 2013 WSAR.

LC-11: 0.16-acre, Category III¹

- Previously identified as Wetland 13 in the 2013 WSAR.
- Category updated in 2019, previously a Category II wetland.

LC-12: 0.23-acre, Category II¹

- Previously identified as Wetland 14 in the 2013 WSAR.

LC-13: 0.04-acre, Category III¹

- Previously identified as Wetland 15 in the 2013 WSAR.

LC-14: 0.11-acre, Category III¹

- Previously identified as Wetland 17 in the 2013 WSAR.

LC-15: 0.05-acre, Category IV¹

- Previously identified as Wetland 19 in the 2013 WSAR.

LC-16: 0.14-acre, Category III¹

- Previously identified as Wetland 18 in the 2013 WSAR.
- Category updated in 2019, previously a Category IV wetland.

LC-17: 0.22-acre, Category III¹

- Previously identified as Wetland 20 in the 2013 WSAR.

LC-18: 0.11-acre, Category III¹

- Previously identified as Wetland 12 in the 2013 WSAR.
- Category updated in 2019, previously a Category II wetland.

LC-19: 0.35-acre, Category II¹

- Previously identified as Wetland 11 in the 2013 WSAR.
- Category updated in 2019, previously a Category III wetland.

LC-20: 0.90-acre, Category III¹

- Previously identified as Wetland 10 in the 2013 WSAR.

LC-21: 0.03-acre, Category III¹

- Previously identified as Wetland 9 in the 2013 WSAR.

LC-22: 0.07-acre, Category II¹

- Previously identified as Wetland 8 in the 2013 WSAR.
- Originally a Category III, updated to a Category II in 2019.

LC-25: 0.05-acre, Category III¹

- Previously identified as Wetland 6 in the 2013 WSAR.

LC-26: 0.01-acre, Category III¹

- Previously identified as Wetland 7 in the 2013 WSAR.

LC-A: Type F² Stream

- Previously identified as Lake Creek/3 in the 2013 WSAR.

January 20, 2022

LC-B: Type F² Stream

- Previously identified as Stream 1 in the 2013 WSAR.

LC-C: Type F² Stream

- Previously identified as Stream 2 in the 2013 WSAR.

LC-G: Type F² Stream

- Previously identified as Stream 5 in the 2013 WSAR.

LC-H: Type F² Stream

- Previously identified as Wetland 16 in the 2013 WSAR.

LC-I: Type F² Stream

- Previously identified as Stream 4 in the 2013 WSAR.

¹ Washington Department of Ecology Rating, Hruby 2014.

² WDNR Stream Types: F = stream provides fish habitat (WDNR 2018); Type S = shoreline of the state; Type N = nonfish habitat stream.

The information on the wetlands and streams discussed above is consistent with the *Wetland and Stream Assessment Report*, dated Revised January 2022; the *JARPA*, dated January 20, 2022, and the *Draft Wetland and Stream Mitigation Plan*, dated January 2022. Please feel free to contact me at (360) 483-9448 or raea@wsdot.wa.gov if you have any questions or require additional information.
